Is tanker 910 a CDF own and operated Tanker?

How is the capacity compared to other other tankers of the fleet?

10488. Re: [NorCalFire] Re: DC-10 in the CDF Fleet!

Complete information on Tanker 910:

http://www.yubanet.com/artman/publish/article_39055.shtml

No, this monster is not owned by CDF. Here is a link to a nice
selection of images:

http://tinyurl.com/crzjo

Another good story:

http://tinyurl.com/j8o5d

Cheers!

Nitrobear,
The audio for the raw footage sure sounded like a chopper to me.
I'll bet ya $100 it was a chopper. ;-p

No, it's not a CDF-owned bird. I'm not sure who the owner/operator is on it. The capacity is about 15x what the S2T is. The S2T is about 800 gallons, and the DC-10 is about 12000 gallons.

The S2T retardant capacity is 1200 gallons. The old S2 piston-engine
aircraft had an 800 gallon capacity.

Another Mac user! Nice. Soon we will take over the world....

I am not sure that Redding Record Searchlight updated their scanner to the new trunk system codes or not. Redding PD switched from Type 1 to Type 2 on their Motorola system, and all of their ID's changed. Since then, I haven't heard much at all on the Redding live feed. I havent' checked in the last week or so.

On the Mac, the link will open up Windows Media Player, load, buffer and play.

If you have a scanner you wish to listen with instead of the live feed while in Redding area, you can go to my website at http://www.norcalscan.org/shasta/sha_trunk.html

Kim,
I think I am gonna answer your question. Forgive me if I am wrong I am still learning about the company myself. Phos-Chek is now owned by ICL Performance Products LP. Its a chemical company. We do make retardant, but we also make the gel too. Yes we can get the gel and make enough of it. We keep enough gel on hand to make 150,000 gallons at any given time. We can have another truck load with a day or two. Rumor has it the gel bases will also have retardant on hand and mix it as well, being that the USFS doesn't want gel on the nation forests. Also the gel is great for initial attack platforms but for extended fire ops they are probably going to want retardant. I dunno how long the gel thing will last, but I don't see it ever replacing good ol red mud.

Cody, the only drawback I hear of with the gel comes from a Fish & Feathers F/F who says the stuf stays around too long. I have not had an oppourtunity to use it or play around with it. I sure would like to see a demo somewhere.

It will be interesting to see how the DC-10 experiment works. The increased capacity versus the longer turn around times limited by which airports that could handle it. Fires in the South State have more long runways available than we do up here. Chico & Redding may not be able to handle it. Now, I realize a lot of the numbers may not be accurate, so I hope there's a better pilot that can give more accurate facts. I also have to assume that they are using different weights & performance than standard.

A standard DC-10 is listed in the 260,000 lb range empty, and 570,000 lbs max gross. I don't know what runway length they need for their loading, but Chico is 6,700 feet, and Redding at 7,000 feet. Compare this to Sac International at 8,600' and Mather at 11,000'. I think Chico also has a weight rating of 170,000 lbs for tandems. Redding is higher, but not significantly.

In computing the turn around times, would they also have to be limited to the range of 230 to 250 knots due to the lower altitudes?

All in all it will be interesting to see the results.

John,
Here is an excerpt from a newspaper article about Tanker 910:

The 31-year-old jet was jointly developed over the past four years by Omni Air International of Tulsa, Okla., and Cargo Conversions LLC of San Carlos, Calif.

Here are two links to those companies:

http://www.omniairintl.com/

http://www.freightersonline.com/ConvProfile.asp?a=9

They have a competitor with an even larger supertanker here (20,000 gallon drop):

10505. Tracy scanner anyone?

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-21 02:43:22 UTC
From: David Coursey
Topic: 10458 Message: 10505

Hi:

It looks like there really will be a scanner on the web here at my house in Tracy. I know agency approval isn’t required, but has CDF ever objected to webscanners?

Meanwhile, what do you want to hear?

From this location you can hear most, but not all SCU traffic and all of San Joaquin County. Stanislaus County fire uses a simplex dispatch system and I can only hear the base. I listen to TCU, MMU, AEU and usually NEU routinely. As well as a fair amount of Air Tactics and CDF Command channel traffic. What would the potential user community like to see in this radio?

Thanks!

David Coursey, N5FDL

Central valley from Tracy to Fresno would be nice and up into the
sierraa's. CDF, County fire's. Air tacs's White channel's etc.

Now up to 50 acres, moderate to rapid rate of spread under a t-storm cell. Units are working their way up the flanks of the fire toward the head. No aircraft on this fire, since it's past the cut-off time. Dozer 4242 is finally at scene and unloading. Dozer/Transport 4241 is returning back to Coulterville to try and jump the batteries or put the old ones back in. Move-ups are underway.

Here are some new?? Air Tac Freqs (CDF) I gleaned off the air:

Air Tac 10: 129.075 (AM)
Air Tac 13: 131.600 (AM)

Also, Air Tac 9 (131.575 AM)has been very active lately.

AFAIK, the Air Tac Freqs being mentioned as of late have been limited
to 1-6 plus 21 & 22.

Anyone else hear any new AT freqs they would like to share??

Ryan

What you probably heard was the Crafton Fire in "Yucaipa" in San Bernardino County (just east of City of San Bernardino).

The fire threatened Crafton Hills College (actually reached the structures), and was stopped at slightly over 200 acres.

Command freq was CDF CMD-1 (151.355 MHz).

The fire was in CDF BDU (San Bernardino Unit) jurisdiction, with assistance from BDF (San Bernardino NF), Redlands FD, and several other agencies.

Currently in extensive mop-up stage.

I believe your refering to Ukiah... and its not in Ukiah its in the Jackson State Demo Forest between Fort Bragg and Willits. The fire is no more than 15 acres but its off a remote logging road off hwy 20. According to the air attack capt. its in super steep country, and burning in super heavy timber. All aircraft are released now, but not after takin 23,000 gallons of gel from me at Ukiah AAB.

Date: 2006-07-23 09:31:38 UTC
From: Kim Noyes
Topic: 10527 Message: 10527

Actung gruppe,
Multiple significant fires in Central California in BEU and FKU that I know of.
I picked up several hours ago a Kamm Incident along the Interstate 5 corridor north of Coalinga which caused a divert from the Warthan Incident which would be west of Coalinga.
This being in FKU but unknown if lightening started but lots 'o' lightening in the vicinity earlier this evening/late this afternoon.
Also, BEU is working three fires south of Hwy 198 and east of US101.
One was reported near the intersection of Indian Valley Road and Slacks Canyon Road and another was near Pancho Rico Road.
All of this is out east of the San Ardo area generally.
They had some helacious lightening out that way yesterday and these are lightening starts and I would not be surprised if more pop up.
A base camp is being set up at the King City Fairgrounds.
SLU sending a significant amount of assistance to BEU.
There are numerous lightening starts on the southern end of the Los Padres National Forest with the Lightening Plan in place for the Santa Lucia District and I suspect (but have not heard) for the Mt. Pinos District as well.

Rico (San Benito-Monterey Unit, California Department of Forestry and Fire Protection): 400 acres at unknown percent contained. This fire is east of San Ardo and is burning in chaparral. Difficult access is hampering containment efforts. Passing storms contributed to active fire behavior with substantial runs.

Taken from NIFC Morning Report at: http://www.nifc.gov/fireinfo/nfn.html

*Note: This fire can be readily monitored on Scanner 22 at http://www.mattlogic.com/

*Note: The command frequency for this fire is CDF-1 (151.355) with much activity on BEU Local (151.250).

Achtung gruppe!
About 20 minutes ago the air attack informed somebody on the ground
that "that area across the canyon from you is going to heck" and about
the same time the fire was putting up a pyrocumulous cloud readily
visible from Atascadero.
Also, this morning at least two inmate crewmembers have had to be sent
to the hospital due to heat exhaustion.

I don't think you folks up north of Monterey/San Benito/Santa Clara/Alameda counties are getting this stuff yet, but directly east of San Jose there are a series of thunderstorm cells that have built rapidly over the past few hours. According to National Weather Service and a brief discussion between some of the folks still working a vegetation fire above the town of Milpitas (from yesterday), they are seeing quite a bit of lightning from these cells.

Weather Service says the cells are barely moving and the activity should be occurring throughout the night and into tomorrow. Could be an interesting 24 hours from here on.

Achtung Gruppe!
First in engine reporting it behind the Jack Ranch Cafe just north of Hwy 41/46 and headed uphill in flashy fuels at a rapid rate of spread and currently about 100 acres.
Due to shortage of resources Atascadero FD and Atascadero State Hospital Fire and Oceano Fire being requested to send engines to this.
Air attack has just lifted off of Paso and reports fire has a good header and appears wind-driven.

Earlier today ST 9260c was headed south. I assume that since they had an engine broke down and said they were at the southbound rest stop north of Red Bluff. NO idea where they were heading. Then at 8 PM (2000) TGU ST 9250c departed headed for Siskiyou (2600). I assume that is because of lightning strikes up there. Also lookouts in the Trinity were reporting lightning strikes and a couple of smokes so I assume tomorrow there will be some activity especially with recon flights.

Craig,
Lunkhead forgot to bring his digital camera but did take 35mm film which will be developed later today and put on picture CD and I will post the best pic taken from San Miguel. When the fire blew late this afternoon it put up the mother of all pyrocumulus clouds as the atmosphere was perfectly primed for it with lots of other non-fire convection taking place all around.

HUGE cell over the alps and heading into the Weed area. Watched it from
my parents in Red Bluff all evening and with binocs at night you can see
the ground strikes. Not sure what we were seeing but I am thinking some
very distant ridges (nice pair of binoculars)...checked dopplar and the
cell was over Weed so that is one big storm.

Shasta/Trinity lookouts were going nuts from what I heard. :)

Here's the latest on this now very large fire.
Yesterday afternoon a thunderstorm rolled in and started spitting lightening and so they pulled folks off the fire and after that the fire (presumably driven by winds from the storm) blew up creating some of the most dramatic pyrocumulus I have ever witnessed in person and easily visible from Atascadero about 40-45 miles to the south. As of last count the fire had charred 7,320 acres with only 40% containment and projected final size of 30,000 acres.
It was started by lightening day before yesterday.
It is now once again producing pyrocumulus clouds.

Updated: Lightning sparks fires on the Klamath National Forest

By Lauren Brooks, Record Searchlight
July 24, 2006

YREKA ☐ Lightning started 22 fires on the Klamath National Forest and adjacent lands on Sunday and firefighters are still battling the blazes today, a Forest Service spokesman said.

As of 8 a.m., 12 fires were reported on the Salmon/Scott River Range District, six were on the Happy Camp/Oak Knoll Ranger District and four were on the Goosenest Ranger District, said John Zapell, a spokesman for the Klamath National Forest.

The fires range up to 30 acres in size, Zapell said.
Two Type II Incident Management Teams are helping manage the fires, he said.

At least 13 fires were also reported burning in the Shasta-Trinity National Forest, said spokesman Mike Odle.

One of the fires prompted Forest Service personnel to encourage campers and hikers to voluntarily leave the backcountry.

The largest fire is a 65-acre blaze known as the "Little Fire," 18 miles northwest of Weaverville.
More than 120 firefighters and two air tankers were fighting that fire.

Smokejumpers were fighting the "Martin Fire," a 3-acre blaze 20 miles north of Junction City in the Trinity Alps Wilderness, Odle said.

Forest Service personnel have hiked into the Trinity Alps Wilderness to warn hikers and campers of the danger.
Officials estimate there are between 60 and 80 people in the backcountry.

The Canyon Creek Trail System, including the Canyon Creek and Bear Creek Trails are closed, as is the Ripstein Campground.

Beginning Aug. 1, the Shasta-Trinity National Forest will enforce fire restrictions on campfires, smoking, welding and engines, except at the Trinity Alps Wilderness area.

For more information on fire restrictions contact the Shasta-Trinity National Forest at (530) 226-2500 or visit www.fs.fed.us/r5/shastatrinity.

Look for resources to start getting thin. With
the new fires from yesterday's thunderstorm
cells and new ones from today. I know that TGU
sent a ST of engines out yesterday (about 6 hours after they
got back from the Canyon fire)and a ST of crews. SHU
was forming up a ST of engines today, I imagine they
will also be going north. By looking at the thunderstorm
cells and the lightning strikes Siskiyou, Trinity got
hit good yesterday and are getting hit again today
along with Humbolt, some strikes in MNF, Lassen and
other areas will really stretch resources.

Hi Joe,

Yeah, I can't pick any of that up, but Fortuna just broadcast that "both dozers are now out of the unit to Madera" and a High Rock crew is enroute to Gasquet... which is probably the fire you're talking about.

Gruppe,
Like a country preacher I'm gonna tell ya what I'm gonna tell ya and then I'm gonna tell ya.
The Rico Fire is really big now at over 12,444 acres.
Tanker 910 (DC-10 Supertanker) dropped on it twice yesterday (Monday).
It jumped Indian Valley Road.
For the third straight afternoon it exploded yesterday (7/25/06).
Containment had been put at 45% but that is now down to 27% after yesterday afternoon's blowup.
I got to see it up close (Woot! Woot!)

Yesterday afternoon I left Atascadero during the 3 PM hour and it was 111* F downtown while Paso Robles hit yet another daily record of 114* F with the all-time high there being only one degree hotter.

I headed up to the Rico Fire via Indian Valley Road fully expecting to hit a Monterey SO roadblock at some point.

The fire had looked like it was in a lull on the drive up but about the time I got to San Miguel a new blackish plume of smoke went up and I wondered if that was a firing operation or a flare-up.

Surprisingly, I basically was able to drive up to the right flank of the head of the fire and stopped before getting to it as I felt uncomfortable getting any closer as I could hear the rushing/roaring noise in the distance and the winds whipped up by it were making yet more noise in the grass and trees around me and there was a plague of grasshoppers all around me that appeared to be trying to flee the fire.
It was variously flashing across a field near some cattle that the old rancher who owned them was not able to help as he seemed in over his head or it was flaring up and running small ridges to my north where it was jumping Indian Valley Road seemingly unimpeded with 40-50 foot flame lengths.
Yes, I took pictures and video and hope both turned out as I haven't looked at them yet.

I remember thinking to myself, "Eat your heart out Mike Meadows." ;-p

Eventually, it got too smokey and a BEU battalion chief asked the guy I had been standing with to leave as it was headed our way which meant me, too, so I left.
I had heard before I bailed out of there that the DC-10 was going to be dropped on that fire which surprised me.
As I was headed back south on Indian Valley Road I heard a chopper instructed to land in the black as Tanker 910 approached so I pulled off onto a turnout just in time to see him on final for his drop but

he disappeared behind smoke and terrain so no photos unfortunately.

After that I headed up Vineyard Canyon Road from Indian Valley Road
and drove out to Parkfield for dinner (the grub and ambiance is great
there) which was under the pall of smoke and it was raining ash there,
too.
The sun was an erie orange/red of course.
As I sat out in the courtyard in front of the Parkfield Cafe waiting
for my Chicken Jack and Chile Pepper Sandwich to cook I heard a low
rumble and realizing it wasn't the next Big One I remembered that
Tanker 910 was scheduled to make two drops according to the radio
traffic earlier.
So, I looked up and lo and behold there she was flying right by
Parkfield roughly paralleling the mountains to the east on her way
inbound to the fire so I saw the new tanker twice which was cool and
got video of it but no pics as my camera was too far away to get at in
time.
I then drove back the way I came out as the sun set and the fire
looked like it was flaring up again.

I hope to do the same thing again today but we'll see.
There was lots of smoke this morning up that way so it must have
burned well enough overnight.

There is lots of traffic related to this on my Scanner 22 on
Mattlogic.com.

Awesome report Kim!!! Thanks for that. I'd kill to see that tanker do her thing. I'm driving to San Luis Obispo on Friday morning and if things are still happening I might just take a little detour.

Thanks again for the great narrative!

Craig,
You're welcome.
By the time you get here that fire might have been contained but the mess in the Los Padres National Forest might be at epic proportions by then.
A fire on the LPF in Ventura or Santa Barabara Co. to the south just prompted somebody on the Carrizo Plain in SLO Co. to report a fire on the Painted Rock Ranch on the Carrizo Plain which an air attack just confirmed is actually a header from one of the many fires burning on the Los Padres NF down south.

Kim Noyes
Atascadero

P.S. Listen to my live feed on Scanner 22 on Mattlogic.com

Wed 3:30pm
Spot fire about mile ahead of the fire just started up and is taking off. It will take a while to get a dozer to it. Air Attack is sweating bullets right now. Tanker 89 is coming out of Redding. Pleading for 2nd tanker. Also pleading for relief air attack. Current air attack can go till 1600. Worried they'll lose air attack during this vital time.

Shasta Operations 151.265 (Command 2)
Shasta Air Attack 151.295

Sounded like they had Copters 205 and 104 working it around 1pm today. At noon though they said the nearest available copter was a military bird out of San Bernardino. So I guess Beiber is calming down and let 104 and 205 back to the valley.

For those on the live scanner - sorry about TGU breaking over Command 2 traffic ;) TGU is on high priority and Shasta Operations (Command 2) is second priority. I know, it's pissing me off too. ;)

Steve said: Also just heard BTU dozer 2140 also being dispatched to this incident. Resources are all over the place in the North State.

Seems like dozers in particular have been at a premium. At the height of the Canyon Fire, when the Midway Fire broke near Altamont Pass, Camino dispatched 4544 from Sutter Hill Station in Amador County for "initial attack" on Midway - clear across the Central Valley.

yeah I just woke up and heard they are now closing up some of the lake area with patol boats near digger bay, keeping boats out of the area. They are asking for a third dozer.

I dont know if this is the same fire or not cause you look north and you can see a nice smoke cloud . maybe thats part of the yreka fires.

Wed 3:30pm
Spot fire about mile ahead of the fire just started up and is taking off. It will take a while to get a dozer to it. Air Attack is sweating bullets right now. Tanker 89 is coming out of Redding. Pleading for 2nd tanker. Also pleading for relief air attack. Current air attack can go till 1600. Worried they'll lose air attack during this vital time.
Shasta Operations 151.265 (Command 2)
Shasta Air Attack 151.295
Sounded like they had Copters 205 and 104 working it around 1pm today. At noon though they said the nearest available copter was a military bird out of San Bernardino. So I guess Beiber is calming down and let 104 and 205 back to the valley.
For those on the live scanner - sorry about TGU breaking over Command 2 traffic ;) TGU is on high priority and Shasta Operations (Command 2) is second priority. I know, it's pissing me off too. ;) Jake

We've got a CWN dozer as a duty dozer here in MMU, because the other
dozer is committed down south.

Fire is both sides of Jackson Ranch Road between Big Springs & Hoy Rd in the Lake Shastina area northeast of Weed. Fire burned up to the southwest corner of the Lake Shastina subdivision. Burnout operation stopped fire from entering Lake Shastina subdivision. No Lake Shastina structures immediately threatened.

Last report, fire estimated at 400 acres. Voluntary evacuations in effect for residences nearest the fire line.

NEVADA STATE OFFICE NO. 2006-
FOR RELEASE: July 26, 2006, 10:30 a.m.
CONTACT: Richard H. Brown, 775-861-6480, or Jamie Thompson, 775-623-1541

Six California firefighters injured in burnover

Six wildland firefighters from an Eldorado National Forest hotshot crew were injured late Tuesday afternoon during a wildland fire burnover. The crew was assigned to the New York Peak Fire northwest of Winnemucca, Nevada, when the burnover occurred at approximately 5 p.m.

Three of the injured firefighters were flown by helicopter from the incident to the Humboldt General Hospital in Winnemucca. Two of these firefighters were subsequently flown by fixed wing aircraft to the Lion's Burn Care Center at the University of Nevada Las Vegas. The third injured firefighter was treated and released from the hospital in Winnemucca. The remaining three injured firefighters were driven to the hospital in Winnemucca, where they were treated and released.

The Eldorado National Forest is located near Placerville, California.

A federal interagency serious accident investigation team is scheduled to arrive in Winnemucca Wednesday afternoon to conduct a review of the incident. "Whenever injuries such as these occur during firefighting operations, a top priority is to learn everything we can about them so that we can work to prevent similar incidents from happening again," said BLM Nevada State Fire Management Officer Rex McKnight.

According to preliminary reports, the burnover occurred during burnout operations. The fire was started by lightning at approximately 6:25 p.m. on Monday. The New York Peak Fire was reassigned to the Jim Thomas Type 2 Incident Management Team at 10 p.m. Tuesday.

The fire is burning at the south end of the Pine Forest Range in juniper, mountain mahogany, sagebrush and cheatgrass 65 miles northwest of Winnemucca, and has exhibited extreme fire conditions in rough terrain. The fire is located in a wilderness study area with limited vehicle access. There are 109 firefighters are assigned to the fire.

The crew has been taken off the fire pending investigation into the incident. Preliminary reports indicate that more than 6,000 acres have been burned by the New York Peak Fire. Containment figures are unavailable at this time.

New team takes over Happy camp complex fires

By Lauren Brooks, Record Searchlight
July 27, 2006

YREKA ☐ A new management team took over command of the Happy Camp Complex fires this morning on the Klamath National Forest, a spokesman said.

The Northern Arizona Incident Management Team is fighting the 11 fires that have burned a total of 90 acres, said John Zapell public affairs specialist for the Klamath National Forest.

The fires' sizes are estimated at 50 acres for the Titus Fire, 10 acres for the Goff Fire and 20 acres for the Grider Fire. Three fires are contained, Zapell said.

The six fires forming the Uncles Complex on the Salmon/Scott River Ranger District have burned about 45 acres and the Rush Fire has burned about 20 acres. About 117 personnel are assigned to the complex, Zapell said.

Fire officials report that the Titus Fire, Uncles Fire and Rush Fire could increase significantly in size causing more smoke over the area, he said.

Most of the fires are in steep, rocky terrain and are inaccessible to roads. Firefighters must hike long distances to get to the fires making containment more difficult, Zapell said.

More information was not immediately available.

Shasta Fire is 65 percent contained

By Lauren Brooks, Record Searchlight
July 27, 2006
SHASTA LAKE ☐ The Shasta Fire is 65 percent contained, but isn't expected to be controlled until Saturday night, fire officials said this morning, a California Department of Forestry and Fire Protection information officer said today.

Full containment is expected by Friday at 8 p.m. and the fire should be controlled by Saturday at 8 p.m., Information Officer Dick Goings said.

Fire officials reduced the expected burn area from 500 acres to 300 acres this morning and the total cost of fighting the fire, excluding damages, will be about $1,500,000, Goings said.

The road to Digger Bay Marina remains closed and the marina will most likely be closed to boats until the fire is controlled, Goings said.

The Shasta Lake Fire has burned more than 200 acres and threatens 50 structures, he said.

Air tankers are on call and 332 firefighters are battling the blaze. Thirty-three fire engines, 12 bulldozers, 15 fire crews, two helicopters, four water tenders and 22 overhead personnel are assigned to the fire, he said.

Final control of the fire is being delayed by steep, rocky terrain, poor access and dead vegetation in canyons that acts as fuel for the fire, Goings said.

Reporter Lauren Brooks can be reached at 530-225-8215 or at lbrooks@....

Residents evacuated in Siskiyou County

By Lauren Brooks, Record Searchlight
July 27, 2006

More than 100 residents were evacuated as the Hoy Fire, a 1,200-acre fire southwest of Lake Shastina, near the Jackson Ranch Road area, threatened homes Thursday evening, a Siskiyou County Sheriff's Department spokeswoman said.

Residents were notified of the fire and either evacuated or advised of the fire conditions around 8 p.m. An emergency shelter was set up at the Big Springs Elementary School on County Road A-12, spokeswoman Susan Gravenkamp said.

Evacuees were allowed to return to their homes at about 11:15 p.m., but Jackson Ranch Road remains closed, information officer Mel Cagle said.

The fire is contained, but several outbuildings were destroyed, Cagle said. No homes were damaged.

Siskiyou County Sheriff's Department, the California Highway Patrol, Weed and Shasta Police Departments, the California Department of Forestry and Fire Protection, Lake Shastina Fire Department, and the Lake Shastina, Gazelle, Weed and Mount Shasta Fire departments responded to the blaze.

Fire threatens regional power lines

By Lauren Brooks, Record Searchlight
July 27, 2006

A 250-acre fire 26 miles northeast of McCloud is threatening regional power transmission lines, which could pose added dangers for firefighters and could force a shutdown of the lines, a Western Area Power Administration spokeswoman said.

The Lakin fire is burning in a corridor between three power lines, two of which belong to California Independent System Operator and one that belongs to Western Area Power Administration, said spokeswoman Laverne Kyriss.

Kryriss isn't worried about the steel towers being damaged, but knows the high voltage electricity would endanger firefighters, she said.

If the fire burns under the power lines or fire retardant is dropped on the fire, the lines' service will need to be stopped, Kyriss said.

It was not immediately clear how much power would be interrupted should the lines have to be shut down or which areas of the state would be affected.
Shasta-Trinity National Forest service officials are seeing more fires, such as the Lakin Fire, start from "sleeper" or "hold-over" fires, officials said. As the humidity decreased and temperatures increased, lightning came to the surface igniting more fires, forest service spokesman Mike Odle said in a statement.

The 500-acre Bake Fire, the 600-acre Oven Fire and the 150-acre Little Fire in the Trinity Alps Wilderness have formed the Bar Complex and are being staffed by additional crews, engines, air tankers and a special management team.

Ten other lightning fires in remote areas of the forest were continuing to spread Wednesday night, while 18 of them were contained, controlled or out, Odle said.

More information was not immediately available.

Ron--
You are correct; it really "blew up". As you are probably aware, we get WIND up here. Fortunately, the wind was blowing out of the south and not the southwest (as usual). Otherwise, I would be replying from a laptop in a motel somewhere. Fire came within one mile of my house. There was a voluntary evacuation of residents to the south of my house. They did a massive burnout on the southwest corner of the Lake Shastina housing subdivision; stopped the fire's advance towards the houses; NO HOUSES LOST!!!

Drove up to the top of a hill a couple blocks away; had a terrific view of the fire. My apologies to the list for not taking my camera with me.

this is the updated story that Jake mentioned about a arson arrest.

my question is why do they wait to arrest a person and risk life and property?

they been following him for a while, could link him to several fires but waited to arrest him.

thank god no houses caught fire or a life was lost.

-Ron

Officers tracked Bishop: Arson suspect was watched while string of fires started

By Ryan Sabalow, Record Searchlight
July 28, 2006

A blend of high-tech satellite tracking, aerial surveillance and a team of officers was used to build a case against a Shasta Lake man accused of setting at least 16 fires in the north Redding area.
Investigative documents filed Wednesday in Shasta County Superior Court reveal that Mark James Bishop, 42, was under nearly constant surveillance through much of July.

A global-positioning-system satellite-tracking device was placed on his Ford Explorer, which was monitored by officers who watched him drive along roads where vegetation fires started minutes later, the documents say.

Bishop, who was arraigned Wednesday, is scheduled to return to court at 8:30 a.m. Thursday to enter a plea to 16 counts of arson. Bishop remained Thursday in Shasta County jail in lieu of $1 million bail. A call to his Redding attorney, Michael Sharpe, was not returned Thursday.

Bishop served from July to December 2001 as a volunteer firefighter for the Shasta Lake Fire Protection District. He was arrested Monday at a Redding Police Department interview room after fire investigators searched his Walton Avenue home.

The court documents say he was questioned Monday and recorded on tape.

Investigators told Bishop satellite-tracking data show him driving near the site of fires the night of July 13, the documents say. Bishop did not admit to starting those fires, but he did say he drove in the area after "having a disagreement with his wife. "He stated he needed to get

out of the house," the report says.

A black marker was used in court documents to remove descriptions of devices used to start the fires. They were described only as "time delay" devices. Court documents accuse Bishop of starting a string of blazes as early as September. The first three fires Bishop is suspected of starting began Sept. 20 on Akrich Street, Old Oregon Trail and Oasis Road, the papers say.

During the next five days, he's alleged to have set five fires in the same area. Bishop is charged with going on another fire spree starting earlier this month. The documents allege that on July 12, Bishop started two fires in the Oasis Road area.

During the next two weeks, Bishop set six more fires, the documents allege.

The final three were set last weekend on North Point Drive, Oasis Road and Old Oregon Trail, the documents say.

The North Point Drive fire reached 2 acres and briefly threatened several homes, Janet Upton, a California Department of Forestry and Fire Protection spokeswoman, has said.

Fire investigators took pictures from the air as Bishop drove past the site of the North Point fire, and an investigator arrived when the blaze was still 10-by-15 feet in size, records show.

Investigators continued to track Bishop after the fire started and watched him stare in the direction of the fire from his vehicle, they said. Officers said the "smoke from the fire was staying low to the ground and not obviously visible," the document says.

Ron,
Your point is well taken, however, these days it's absolutely vital that an airtight case be developed against any suspect before charges are filed because once it goes to trial, the prosecuter gets one shot at a conviction. In addition, while it's frustrating from a journalism standpoint to be kept in the dark about these investigations, I completely understand because you don't want your person of interest to spook on you. Too many bad guys walk because the DA jumped the gun and goes to court with a badly prepared case that any competent defense attorney can shred. Remember...the prosecution has to convice 12 people of the facts...the defense only has to put the slightest doubt in the mind of one...Not a perfect system, but a lot better than the alternatives.

In order to build a solid foundation of evidence for presentation in court, and to establish that an individual may be a serial arsonist. Defense attorneys frequently will successfully challenge pieces of the evidence on technical grounds (for example, a particular device used to set a fire that had been recovered may have been improperly handled in the time between arrest and trial, breaking the 'chain of custody'), and unless there is multiple pieces of evidence, cases have been lost.

Bob,
glad you made it ok. thank god the wind didnt shift on the back fire.

what was the wind speed on this startup?

-Ron

bob.berg.listmail6@nwusa.net(Bob Berg) Wrote:
Ron--
You are correct; it really "blew up". As you are probably aware, we get WIND up here. Fortunately, the wind was blowing out of the south and not the southwest (as usual). Otherwise, I would be replying from a laptop in a motel somewhere. Fire came within one mile of my house. There was a voluntary evacuation of residents to the south of my house. They did a massive burnout on the southwest corner of the Lake Shastina housing subdivision; stopped the fire's advance towards the houses; NO HOUSES LOST!!!
Drove up to the top of a hill a couple blocks away; had a terrific view of the fire. My apologies to the list for not taking my camera with me.

Linking him to several fires doesn't make him an arsonist. Here in the good old US of A you are still Innocent until proven guilty. Arson is an extremely difficult case to prove. Did anyone witness him actually setting the fire? Did anyone witness him dropping a lighted match? Don't take this reply to think I'm a bleeding heart, Arsonists should be treated as domestic Terrorists. They should be Hung until dead in public! But the fact remains that you need a very strong case to prove it and put this guy away for a very long, long time.

WX conditions during startup of the fire:
Temp: 98-100
RH: 7-8%
Wind: 15 gusting to 25, a light breeze for our area :-)

It was a good thing that we didn't have the 50 to 70 mph winds that we had during the Hotlum fire in February of this year.

Also, yesterday (Thursday) afternoon we had the typical winds out of the southwest. If the fire had started then, we may have had residential structure loss.

Ron-
At this point I would be constrained to point out that Probable Cause to conduct an investigation of a Person Of Interest and Proof Beyond A Reasonable Doubt are equines of entirely contrasting hues. I don't KNOW what evidence the investigators had at any point during their observations of the suspect, who remains a suspect, by the way. Perhaps you have better qualified first-hand information from which you can draw such a conclusion?
My other feeling is that every time something of this nature happens, conviction or not, it gives terrible insult to the legions of hard working honest dedicated firefighters who receive a black eye in the mind of the public at large. I am saddened and quite simply boggled beyond any possibility of understanding what goes through the mind of a person who might do this.

The court documents are interesting to read. They note that in the beginning of the whole case they kept coming up to fires that were arson, but couldn't find the ignition, thinking it is a time-delay device (of which type is blacked out in black ink in the documents). Later on as they start narrowing the investigation they have multiple vehicles tracking this guy and keeping him in sight. They knew where he ate lunch every day, routes he took home, his wife's name etc. One of the times it talks about seeing the guy stop along a road, then take off. One of the followers stops and waits, watching the spot. Sure enough, 2-3 minutes later the spot ignites. Another fire they put it out with a water bottle shortly after it ignited. These fires are the ones the investigators were waiting for, because now they can find the time-delay device and have it as actual evidence before it burns up like the earlier-case ones.

It also talks about surveilance cameras (locations/details blacked out in documents). This is common for fire investigators to install on remote roads that have had a rash of troublesome fires. Hwy 154 in Santa Barbara County going over San Marcos Pass had a rash of arsons. That area can explode faster than you can blink. They ended up installing permanent cameras at both ends of the Hwy, recording every car coming in and out of the area. It helped nab that suspect I believe. The cameras are still in place, and I've seen the north end, but never have seen the camera on the south end. All it needs is a VCR looping for an hour or two. A fire breaks out between the cameras and they just go grab the tape before the loop is over and put it in evidence.

I think the articles have been well-written with public interest in mind. Explaining the scary notion of letting an arsonist do their thing instead of arresting them right away. I personally feel safe with investigators following them, GPS tracking, and aerial surveilance.

I wouldn't have a problem using a tribunal of judges instead of twelve "sheeple".

Ben,
Oh, sure, and he's done ads for the CalPines Development near Alturas and now one in NW Arkansas.
So I gather these are the call signs to the boys on CHiPs, eh?
It went right over my head.
Since we're talking about a show as schmaltzy as CHiPs perhaps I need not be ashamed I missed that joke, no? ;-p

Estrada is whoring himself for just about any land outfit out there.
I've seen 'prime real estate in Arkansas,' 'prime real estate in Lake
Shahstina,' and about 5 others in the last couple of weeks...

I've seen him doing ads for Lake Bella Vista in NW AR. That's the place that all the old folks from the midwest buy property to die on.

So what do you call someone who is an arsonist and a rapist:

An "arsrapist" just a thought.

Lat/Lon per IC: 41? 19.67N 124? 01.913W

This is about midway between the nearest hospitals, Arcata & Crescent City, about 45 mostly-mountainous miles away from each.

Seven total patients far, LZ has been established - CALCORD 156.075

US 101 expected to be blocked up to two hours

hm

10653. REACH 5 Helo can't find SHU resources on the radio

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-28 22:35:27 UTC
From: Harry Marnell
Topic: 10653 Message: 10653

Enroute the "Highway IC" in HUU, REACH 5 helo from Redding is now at 41?01N 123?28 is concerned that he's been unable to contact any of the fire folks on the incidents in SHU and SRF, will shortly be passing over the air tankers' base near Willow Creek

Fortuna CDF advising him the tankers' take-off landing freq is 122.85, and there's also a "significant air show" to his north over Orleans fires, not expected to be a factor.

Bulk of fires contained, controlled or out

By Lauren Brooks, Record Searchlight
July 28, 2006

Thirty of 34 fires on the Shasta-Trinity National Forest are controlled, contained or out, but firefighters are still fighting the Lakin Fire and the Bar Complex, which includes the Oven, Bake, Little and Martin Fires, a forest service spokesman said today.

The 370-acre Lakin Fire reached 50 percent containment, 26 miles northeast of McCloud, and officials expect full containment Monday evening, according to the Wildland Fire and Incident Information System.

Firefighters secured the heel of the lightning fire on the west side this morning and bulldozers are building a line on the east side of the fire, said Mike Odle, Shasta-Trinity National Forest spokesman.
The blaze continues to burn parallel to two regional power transmission lines and has an extreme potential for growth, according to www.inciweb.org, an inter-agency fire information Website.

The fire burns half a mile east of the California Oregon Transmission Project power line and three-quarters of a mile south of the Western Area Power Administration and Pacific Gas & Electric power lines, Odle said.

An incident management team took control of the Lakin Fire Thursday at 8 p.m. About 400 firefighters are attacking the fire, including six hand crews, eight bulldozers, 15 engines, six air tankers, three helicopters and support personnel, Odle said.

Another incident management team took control of the Bar Complex, north and northwest of Weaverville in the Trinity Alps Wilderness, Thursday at 6 p.m.

Estimates for the fires are 213 acres for the Little Fire, 724 acres for the Bake Fire, 137 acres for the Oven Fire and 3.5 acres for the Martin Fire, with a total of about 1,078 acres, according to the Website.

The Bar Complex's Little Fire is not threatening the community of Canyon Creek, but, to reduce congestion, Canyon Creek Road, north of Powerhouse Road, is closed to traffic, with the exception of residents and emergency vehicles, Odle said.

Ripstein Campground and the Canyon Creek Trail System are closed until further notice, he said. The following trails are closed until further notice:

☐ Caribou Lake Trail
☐ Old Caribou Lake Trail
☐ Little South Fork Trail
☐ East Fork Trail
☐ New River Trail
☐ Slide Creek Trail
☐ Immigrant Creek Trail
☐ Poney Creek Trail
☐ Jim Jam Ridge Trail
☐ Seymore Gulch Trail
☐ Canyon Creek Trail
☐ Bear Creek Trails

The complex is being fought by 293 personnel and the Little Fire is 80 percent contained. The Oven Fire doubled in size since Thursday night and threatens residences and outbuildings, according to

www.inciweb.org.

Meanwhile, the Happy Camp Complex, which is made up of 11 fires across the Happy Camp Ranger District of the Klamath National Forest, is 10 percent contained and totals 400 acres, according to the Northern Arizona Incident Management Team, which has taken over control of the fire.

The estimated cost of the lightning fire is $450,000 and no structures are threatened. Of the 11 fires, five are out and one is contained. The Goff Fire, about nine miles northeast of Happy Camp, and the Titus Fire, about 13 miles south of Happy Camp in the Marble Mountain Wilderness Area, continue to spread, the management team said.

Firefighters will continue a direct attack on the Goff Fire, reconnaissance of the Titus Fire and secure lines or mop up remaining fires today.

10657. Arcata FPD to staff 2 of their 3 stations.... by next January.

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-28 23:43:26 UTC
From: Harry Marnell
Topic: 10657 Message: 10657

Arcata (in Humboldt County) FPD's "Benefit Assessment" election has passed, about 71% in favor, which means that by January they should be able to staff 2 of their three stations with 2 firefighters each, 24/7. At present only one station has been staffed with two FFs. This is for a district covering 63 sq miles with population of over 35,000, including the city of Arcata, Humboldt State University, and the adjacent unincorporated communities including McKinleyville.

That will be nice. About a month ago, late in the evening I called 9-1-1 to report a vegetation fire near my home - the first engine from "Mad River" Station in Arcata arrived 24 minutes after my call. Meanwhile three engines sat, unstaffed, in the McKinleyville station, less than a mile away. Fortunately it was a damp night and the fire was taken care of without much spread.

They'll also be replacing one engine which has itself caught fire three times in recent years, and other equipment in future years.
http://urlcutter.com/ArcataFireFlyer

Their dispatch freq is 154.13R
Fireground is 154.145 or 154.13 simplex

10659. Re: [NorCalFire] Re: Arsonist arrested

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-29 00:20:14 UTC
From: hosgs1@webtv.net
Topic: 10626 Message: 10659

the probable cause would be the fire starting after witnessing the vehicle stopped and the fire starting 2-3 min after the vehicle left. especially if it meets the discription of the suspects vehicle.

nothing different then doing a routine traffic stop on suspicion. LE's do it all day.

now you may get hard evidence (proof) in the vehicle or you may not during the stop but hopefully you get something for a search warrant at his place or vehicle and get it to stop. (Forensic tech,investgators can do wonders for a case on finding evidence) Screw the spooking at this time, you cant get any closer except for catching him in the act.

murderers get convicted all the time without any weapons being found, some just on circumstantial evidence (remember that conviction on the shasta dam murder just because he had the victims rv? they could not even get a admission on the suspect)

now lets say one of those fires got out of control and burned some houses down and it came out that investigators been following this guy for 1 month what do you think the public is going to say?

no doubt the investigators and fire fighters are doing a AWESOME job but I feel in the publics best interest you snag someone on the legal evidence you already have instead of building a case on something that could exploded into a disaster any moment (fire).

Like the fire on point dr. investigator on scene reports small spot. by the time suppression gets there 2 acres and structures threating. all they said was it started after he stop and left and he was watching the fire afterwards. all of a sudden he's arrested a few days later. will be interesting on what evidence at the time they got him on to arrest him.

In my opinion i believe the investgators had to do something at that time before somethng really exploded and it back fired.

this maybe ot but a good example would be narcotics sales. undercovers buy small quantities of dope first, letting the guy(s) go to get a bigger bust or supplier later. You hear it all the time all over the u.s.

well didnt the first buy break the law? you could get them for sales,distribution, hell all kinds of charges. even weapon charges if they have one at the time. depends on the time of the sale. Just that alone is a good couple years. but no, most have to go for the agusto. Kind of like this case.

I respect your opinion. I just feel they could have done a better way of dealing with this case thats all. im no expert but after reading the court documents it stills stands.

the fact is they are doing a awesome job!! just not everything is perfect and should be open to debating.

Respectfully,
Ron

ps. not all hard working, honest firefighters do the right thing all the time. explain that to the people in lewiston on the control burns that got out of control in lewiston a few years back and i believe one up your way somewhere and who paid for that honest mistake.

bob@...(Bob) Wrote:
Ron-
At this point I would be constrained to point out that Probable Cause to conduct an investigation of a Person Of Interest and Proof Beyond A Reasonable Doubt are equines of entirely contrasting hues. I don't KNOW what evidence the investigators had at any point during their observations of the suspect, who remains a suspect, by the way. Perhaps you have better qualified first-hand information from which you can draw such a conclusion?
My other feeling is that every time something of this nature happens, conviction or not, it gives terrible insult to the legions of hard working honest dedicated firefighters who receive a black eye in the mind of the public at large. I am saddened and quite simply boggled beyond any possibility of understanding what goes through the mind of a person who might do this.

--- In norcalfire@yahoogroups.com, hosgs1@... wrote:
Bob-
well taken however they have been watching him, physically for sometime. they should have arrested him when they had hard evidence the first time. oviously they had some to get him trackable. not giving a large risk to the public.
my point is this could not be any dfferent then one of us jumping in our vehicles and showing up on fires and taking pics having the investgators
looking at us.

Wow Harry. You mean you didnt take advantage of that for a joy ride? :-)

sad I know. the Anderson FD bond Didnt pass in Anderson this year and
that station is mostly run by volunteers.

two or three F/T paid personal only. the rest about 20 volunteers.

chief matheson said he dosent know what to do next.

AA now lifting tanker devert restriction saying fire is running to the north away from the structures.

copter 205 at bention air field getting fuel.

fire looking good now as long as the wind does not pick up. litte breezy here 10-15 in my area.

still 80 acres.

Half acre slash pile fire and three spot fires off Redwood House Road and Hiway 36. Three engines total...CDF, Carlotta, Fortuna. Air Attack and a Bucket Helo are on scene. Pile belongs to Pacific Lumber and they are sending a bulldozer and water tender to tear apart the large pile. Tenders from a private party as well as mutual aid agencies are being used. Concern is with the wind that is kicking up (normal for this area this time of day).

CDF 151.25
Volunteers 154.07
Using Tac 3 151.175
Air Attack 151.280
Pacific Lumber 153.26

Shasta putting local government ST together 3151B from
stations 33, 42, 52, 21, 53 and poss 46. Also TGU
sounds like they are trying to put one together so
far they have asked for chiefs from station 70, 12 and
9 to contact command center. Suspect they may try to
get an engine from Red Bluff and maybe Corning. Engines
for county are very scarce right now.

I heard Butte is also sending a strike team of Type 2 engines to the fire.
Sounds like they are getting a lot of resources up into that area...

from redding.com little outdated on equipment.

-Ron

Updated: Fire forces evacuation in Weaverville
By Record Searchlight staff
July 29, 2006

A blaze has burned at least 1,500 acres near Weaverville and is threatening structures there, said Marilyn Evers, spokeswoman for the California Department of Forestry and Fire.

The blaze which started shortly after noon just east of Junction City has forced evacuations in Weaverville. A shelter had been set up at Douglas City Elementary as of 7:30 p.m.

The fire is burning towards the area where the Oregon burn scorched 1,680 acres August 28, 2001.
A portion of Highway 299 West between Memorial Drive in Weaverville and Canyon Creek Road in Junction City has been closed since 3 p.m. Officials have no idea when the road will be reopened.
Nearly 300 fire personnel were on the fire, with 32 fire engines, 13 bulldozers , two air tankers, two helicopters and seven water tenders.

Word from my parents who live one block off Main Street in the historic part of Weaverville - the La Grange restaraunt burned with the Diggins Bar next door too - this was caused by an explosion when a transformer was ignited - 70 people inside the restaraunt when it blew - allegedly all people made it out ok. Waiting on more news from parents, they are in the process of evacuating out.

Don--

No hard confimation. But based on description of events sounded like
separate fire from kitchen maybe. But, lofting of brands could have
been an issue on those old roofs down in town.

Just got off phone @ 2130 with friend--they're heading down to
Redding for night. Evac routes posted on signs in town etc.

Thank you for your thoughts- I'm on vacation from work, was supposed to go rafting on the trinity river this week with my parents - we were to launch at Junction City, guess that won't be happening...per parents, the winds are getting really strong.

this maybe two incidents. The junction city fire started off rifle
range rd.

currently mandatory evacs are oregon st.

currently voluntary are west weaverville.

I have not heard any structures in weaverville gone.

im getting ready for work. I will listen tonight and check the news out
at 11. I will update with what I know at around 6:30am

have a good evening everyone.

Word from my parents who live one block off Main Street in the historic
part of Weaverville - the La Grange restaraunt burned with the Diggins
Bar next door too - this was caused by an explosion when a transformer
was ignited - 70 people inside the restaraunt when it blew
- allegedly all people made it out ok. Waiting on more news from
parents, they are in the process of evacuating out.

Per a waitress working at the time at La Grange - the building still exists, but the restaurant suffered greatly from the fire, the bar next door is better off. No other buildings on Main street appear to have been affected luckily as they are all attached for the most part.

Because I care so much, I will actually put Junction Operations (CDF Command 1) on highest priority. :) Shhhh don't tell TGU they just got bumped. If anybody is monitoring and they notice the incident move to a different command or air tactics moves, let me know directly or let the list know. I can't monitor much but will keep eye on email and reprogram scanner appropriately, as soon as I can. It should be scanning the freqs they *would* move to so I shouldn't miss much.

CMD1 - pri1
TGU Local - pri2
SHU Local -pri3

Topic: 10768 Message: 10768

I came home to a lot of messages tonight. It always feels good knowing the list is running smooth. :)

Lets remember to try and keep one-liners and (messages that could be sent directly to another) off the list please. It gets crazy here during large fires and that will help keep the list chaos down a little. It'll be times like these that moderators will hit first and ask questions later for the sake of the entire list sanity. (we're sane?)

Otherwise - awesome posts/info and thanks everybody. Have fun (on the list) and stay safe (for those involved). It'll be interesting to see what the Oregon Mtn caltrans cam looks at tomorrow, if it's still there. I think I played at the La Grange once. Good times. Remember Google Maps will help find roads they're talking about. Switch to Hybrid view to see how deep into a neighborhood they are in, or if the road borders the vegetation/hillside.

Around midnight Junction IC said they had 25 dozers at incident or enroute, and Div Whiskey advised he needed at least ten more in addition.

Also a bit later there was a hard-to-copy communication about needing to protect the Trinity County radio site on Oregon Peak.

Just now (0500) heard two strike teams advising they were on I-5, one near Williams, the other appr Corning.

well busy night for weaverville. at 11pm they said 1 structure (a trailer) was lost. 2,000 acres had burned and approx 277 fire fighters fighting this monster.

im sure everythng now is x3 or 4. Same road closures are still in effect.

the trinity radio site was temp threatened but saved.

at the hospital I work we got some evacs from trinity hospital.

according to the record searchlight looks like we may get the modified D-10 tanker up here but not sure for this fire.

not to much radio traffic now at 07:15. I dont know much other then the above. sorry guys though I would have more.

they are also using CDF TAC #5

for more infomation on the fire you can call 530-225-2510 they should have a update on fire, acres,etc. after 8am. they are in debriefing now.

going to bed so no more updates from me.

The mother of all air tankers: Modified DC-10s, 747s may join CDF's fleet over north state blazes

By Dylan Darling, Record Searchlight
July 30, 2006

It used to haul 380 vacationers across 2,300 miles of ocean to the Hawaiian Islands, but now it is swooping down over fires in California, dropping up to a 4-mile-long line of retardant.

"We expect it to be a game changer," said Rick Hatton, partner in 10 Tanker Air Carrier, the company that gave a former American Airlines DC-10 new life as an air tanker.

The DC-10 is not your average tanker. Three external tanks hold 12,000 gallons of retardant -- thousands of gallons more than the next biggest tanker in the state Department of Forestry and Fire Protection's fleet. The plane first went into action earlier this month on fires in Southern California, and it could be soaring the skies of the north state soon.

"It's a possibility; it really depends on the conditions," said Michael Jarvis, CDF deputy director of communications.

Jets-turned-air-tankers are the latest weapon for firefighters in the state. Another addition in recent years is also an aircraft finding a new profession, this one an assault helicopter with cameras and heat sensors replacing its normal array of guns and rockets. As fire suppression technology advances, the state has been phasing out the use of lookouts -- long an icon of wildfires.

The DC-10 is definitely an eye catcher. It has a white-and-orange paint job and is still dotted with passenger windows along its sides. But the belly is all business.

Bolted onto its underside are tanks that can hold water or retardant. When on the ground, the tanks hang about 11/2 feet above the tarmac. Hatton said the liquid isn't held inside the plane to allow for a quicker drop.

It took four years of design and testing to get the single DC-10 ready to join the fire-fighting fleet, he said. The plane is based in Victorville and CDF can call it to fires anywhere in the state.

Mike Padilla, CDF aviation chief, said the plane proved its worth when it helped protect the town of Big Bear earlier this month.
"It's performing as well as advertised, and better," he said.

The DC-10 can lay down a 100- to 200-foot-wide swath of retardant for as far as four miles, he said. The plane usually drops its load from 400 feet.
Padilla said the big tanker will complement smaller planes that long have been used.

These planes include the P-3, which can hold 2,500 gallons of water or retardant, and the S-2, which carries 1,200 gallons. The smaller planes can drop into canyons and get into spots that the DC-10 can't.
"That's why you still need the small tankers," he said.

There's also a bigger air tanker coming. Oregon-based Evergreen International Aviation has a 20,500-gallon 747 "Supertanker" that it hopes to get in the skies fighting fires next month.
"It's a 747 -- it's huge," said company spokeswoman Nichole Wahlberg.

The plane is in Arizona going through a maintenance check, and the company is working on potential contracts with the Forest Service and states around the country, she said. While the DC-10 has Federal Aviation Administration and CDF clearance, it is still waiting for approval from the U.S. Forest Service before it can fight fires in national forests, Hatton said.

While the big tankers are just getting off the ground, a high-tech helicopter used by the U.S. Forest Service has been buzzing fires in the north state for a couple of years, said Mike Odle, spokesman for the Shasta-Trinity National Forest.

This year, Shasta-Trinity has a prototype Bell 209 Cobra equipped with the latest in camera and sensor technology. Odle said it gives those on the ground a real-time look at a wildfire from above.
"It gives firefighters a chance to have an eye in the sky," he said.

While the Cobra is becoming a fixture at fires in the north state, CDF has closed lookouts around Redding that for years were the eyes looking for fires.

"With the advent of the cell phone, fires that get called in from lookouts are often the same ones that are being called in by cell phones," said CDF spokeswoman Linda Galvan.

For this summer and last, CDF hasn't fully staffed four lookouts near Redding because of lack of funding, she said. CDF will call up emergency workers to go to the lookouts during and after a thunderstorm and other cases of extreme fire danger.

Lookouts still keep watch over lands managed by the Shasta-Trinity, because much of the land isn't in cell phone range, said Rod Schaefer, who staffs the lookout on Sugarloaf Mountain north of Redding.

While he can see more than 20 miles from his lookout, it helps to have other lookouts also spotting fires to figure out a more precise location.
"It would be advantageous to staff some of them," Schaefer said.

Reporter Dylan Darling can be reached at 530- 225-8266 or at ddarling@....

Would someone please send the appropriate link to the Google maps for this incident? I couldn't find the exact location.
Thanks in advance.

I'm streaming what I can pick up from the Junction & Orleans fires, at http://www.publicsafetyfeeds.com/ - in the dropdown box on the left, go to CA - Humboldt Co.

Also, Jake is feeding other frequencies from the Sacramento Valley/Shasta area, click on the "Listen Live" link on the left side at http://www.norcalscan.org/live.html

Well, the system ate the image I put in the message: Follow this link to see the last image from Oregon Mountain cam.

http://www.dot.ca.gov/dist2/cctv/oregonmt8.shtml

You may have to scroll to the bottom of the page. There are two images there about 1 hour apart...No fire...LOTA FIRE!

10793. Junction Incident

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-30 20:01:53 UTC
From: Dan James
Topic: 10667 Message: 10793

Just talked to a Strike Team Leader on the Junction Incident. 2500 acres w/ "Shaky Containment" An Inversion is over the fire and when it lifts things could go active again. On the DC-10, My opinion only,I doubt it would be used on this fire. Yes, this is a big fire but not big enough. The DC-10 is not for "Inital Attack" It's for making long drops along long ridges ahead of the fire. But as things heat up and all resources are stretched to the max, anything could happen.

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-30 20:11:55 UTC
From: Jake H
Topic: 10667 Message: 10795

Yeah, not sure if they switched to a different repeater, or the smoke up there is getting in the way. 151.355 is barely readable on a VHF gain antenna 40ft in the air in Red Bluff. It was crystal clear last night. Hoadley Peak is the repeater they were on last night, and they don't have any other options in the area for Command 1 unless they went portable for some reason (highly doubtful).

Now I just heard the Benton helibase loud and clear on command direct (not going through repeater).
Jake

10796. Re: [NorCalFire] Junction Incident

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-30 20:16:11 UTC
From: Jake H
Topic: 10667 Message: 10796

Ahh, the inversion explains my reception problems. The traffic is probably flying right over my antenna and some scanner in San Juaquin county might hear it perfectly until the inversion lifts. I am hearing ground tacticals and aircraft here and there much better than the repeater. I also agree with Dan. The DC10 would be pretty scary to fly up there in the elevations. The terrain and fire conditions just don't make a friendly environment for any tanker at this time. (smoked out conditions up there)

Jake

The only real time cams operated by CalTrans are in the large metro areas from what I've seen. You could surf their page in case something has changed I guess.

The last image in memory up there was yesterday at 18:18 or about that. That last image is now the only one left if you scroll down to the previous images page. The fire looked real close to the site in that last image. I would bet that either the power and/or the camera got burned. Details are sketchy at best.

Unfortunately they are only updated once an hour..look at the current views and past views, you can see how the smoke gets worse in a few of them.

Redding.com has had the City and County scanners switched (again). I
was monitoring the Air Attack for the Shasta Incident last week on
City Scan, and nothing to be heard on County Scan.

10815. Hunter fire update MNF

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-31 00:30:48 UTC
From: nitrobear@comcast.net
Topic: 10815 Message: 10815

I am seeing a large PALL of smoke that looks like originates in the MNF, here in Chico now. Just a little north of Chico and high level so far. Not much breeze at surface levels but flow still from the SE and pretty cool today. Here is an update on the Hunter incident. Sounds like it is still running. The wind report from the update makes it look like the smoke I'm seeing may not be the Hunter. Could it be the Rumsey? Seems too far north from what I see and too far South for the Junction fire.

Summary
The Hunter Fire is in the Black Butte River watershed, which is critical habitat for northern spotted owls and anadromous fish. Precautionary evacuations are in place for summer cabins in close proximity to the fire. The area of the fire that crossed into the Grindstone Ranger District is now the responsibility of the Kingsley Complex.
Basic Information
Updated2006-07-30 15:36:10 EST
Incident TypeWildand Fire
CauseLightning
Date of Origin07/24/2006 at 1745 hrs.
LocationMcCoy Ridge
19 Miles SE of Covelo
Incident CommanderJohn Philbin

Current Situation
Size1,657 acres
Percent Contained5%
Estimated Containment Date08/10/2006 at 1800 hrs.
Total Personnel379
Fuels InvolvedTimber (litter and understory)
Fire BehaviorBacking fire with short uphill runs and single tree torching.

Today's Significant EventsBurned vegetation around cabin located near Salmon Creek. Graded and watered main access road into the fire. Completed primary dozer line and contingency plans for secondary control line on north end of the fire.

Outlook
Estimated Date of Control
Planned ActionsCoordinate operational plans with Kingsley Complex. Hold Hunter Fire west of Black Butte River.
Projected MovementFire is expected to move North, East, and South.
Growth PotentialExtreme
Terrain DifficultyExtreme
Containment TargetUnlikely with current resource shortages
Remarks

From: nitrobear@comcast.net
Topic: 10816 Message: 10816

I know it's Nevada but a 200K acre fire anywhere in the west deserves a watch now and then. Someone was looking for a web cam out there, man, they are lucky to have a paved road or two 50 miles NE of Winnemucca! ;-) BLM has their hands full it appears.
--
Nitrobear

Winters (Winnemucca Field Office, Bureau of Land Management): 165,960 acres at five percent contained. This fire is 50 miles northeast of Winnemucca. The communities of Midas and Tuscarora, ranches, a repeater, and gold mines remain threatened. Lack of road access is hampering containment efforts. Extreme plume dominated fire behavior was reported. Information: Call 775-224-3093.

From: George.Cusack@alldata.com
Topic: 10818 Message: 10821

Potential confusion: There is also a Kinsley Incident in the Stanislaus. Different spelling, but it sounds about the same on the radio. It is near the Kinsley Station south of Hwy 120. Very minor incident as of this afternoon, and it shouldn't generate a bunch of resource orders. But if you are down here in the "Call me anything but SoCal" part of the NorCal group, you might hear reference to it.

Of which the Hunter Fire is the largest fire in the Kingsley Complex and I am assuming it, being the largest, is the one making the trouble.

From: Jack West
Topic: 10740 Message: 10823

No cams. I haven't had time to look for pictures on any web sites. This fire is in the middle of nowhere. It started in a Wilderness Study Area (WSA) and it's grown enough that it's threatening ranches and various other structures and a couple of very small towns. This is the 3rd team fire we've had this week and 4th in a month.

I've never seen that country burn but, geesus, 200,000 acres of anything is a large burn. Shrubberies, sage, or whatever. ;-)
I've driven through there several times and there are pockets of timber, sage and some farm land from memory.
200,000 acres?

BLM doesn't usually get to excited until it hits 100K acres of desert from memory. ;-)

Topic: 10818 Message: 10826

Can't see anything but a general haze of smoke in Willits today.
It was looking pretty impressive the other day, but I guess maybe
the winds shifted and are blowing it the other way now.

Generally anything in SLO/Kern/Inyo Counties and south is SoCal. From there north to around Stockton is CenCal, and north of that is NorCal. This roughly divides the state into thirds.

From: T Sharp
Topic: 10828 Message: 10837

From the CDF web sight:

Major Incident Command Team
The California Department of Forestry and Fire Protection (CDF) has developed Major Incident Command Teams (MICT) to manage large complex incidents. CDF maintains 10 Major Incident Command Teams, five in the Northern Region and five in the Southern Region. Each day of the year two CDF Major Incident Command Teams are ready for deployment anywhere in the state, or outside of California if requested.

A Major Incident Command Team consists of 16 highly trained and certified individuals and 10 trainees that, as a team, provide incident management skills for any type of disaster, regardless of location. Each team includes members with the experience and skills to fill responsibilities including incident commander, planning, finance, logistics, safety, information, and air operations to name a few.

The CDF MICT works under the direction of the local jurisdiction having statutory responsibility for the incident. If it is a wildland fire on State Responsibility Area (SRA) then CDF is the lead for all activities in the suppression effort. If a wildland fire were to occur on both SRA and federal lands, then a unified command may occur. If, however, it is an earthquake or hazardous materials spill within an urban area, CDF may be called in to assist in the management of the incident, but the overall lead would be the local agency of jurisdiction.

CDF MICTs manage large complex wildland fires on a regular basis as well as major hazardous materials incidents, flood fighting operations, earthquakes and other incidents or activities needing a management structure.

Sorry to those who don't speak acronymic...Yes it is Major Incident Command Team...you know that team of people that get called in on major incidents. CDF had them, USFS has them...they are everywhere. I think you can find the teams for USFS but haven't been able to find them for CDF...sshhhhh your not suppose to know who they are!

tks, Steve

10841. The #-dash-# incidents in SCU

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-07-31 19:51:39 UTC
From: David Coursey
Topic: 10841 Message: 10841

Many probably already know this, as very little CDF does is ever totally new. But, SCU has been using a special naming convention for recent lightning-caused fires. So far, we've had the 5-DASH-1, 5-DASH-2, and 1-DASH-1 fires. The first number is the SCU battalion number and the second is the sequential fire number. These would be written 5-1, 5-2, etc., but on the radio the word "dash" is used.

73 from Tracy!

From: Casey McCullough
Topic: 10667 Message: 10857

Just came thru 299 this afternoon from the coast. Junction City to Weaverwille lots of equipment around. 1 way controlled traffic up the hill and right down to the East side of town. Followed a couple of dosers on flatbeds out to Redding and SB on 5. Burned right down to the road on North side of 299 between Junction City and bottom of hill starting up the summit West of Weaverville. Saw a CDF copter carrying retardant (not h2o) that he was getting from a big container just East of Weaverville. Had not seen that before but then again, very little experience. Very very smoky in and around Weaverville. Again, only AC I saw working the fire was the one helo.

Feds Call Reinforcements for Wildfires
Tuesday, August 1, 2006 12:18 AM EDT
The Associated Press
By CHRISTOPHER SMITH

BOISE, Idaho (AP) ☐ Federal land management agencies are being asked to make more employees available to fight wildfires because crews and equipment have been stretched to the limit by nearly 60 major blazes around the West.

For the first time since 2003, the National Interagency Fire Center over the weekend raised its response status to the highest threat level, a move triggered when nearly all available crews and firefighting resources are committed.

The move allows federal firefighting coordinators to summon additional federal employees, military reinforcements and foreign fire crews if necessary.

"It frees up what we call the militia ☐ agency employees whose regular job may be as a biologist or realty specialist but who are trained in fire duty and can now be called up to help," said Randy Eardley, a U.S. Bureau of Land Management spokesman at the federal firefighting center in Boise.

More than 24,000 firefighters were working on fires across the West on Monday, including 58 large fires of 500 acres or more.

The biggest active fire in the country was in northern Nevada, where nearly 300 square miles of grass and sagebrush had burned. It was 10 percent contained Monday, and fire bosses had no estimate when it would be surrounded.

No homes were in immediate danger, though one outbuilding had been destroyed, said Jamie Thompson of the U.S. Bureau of Land Management in Winnemucca, Nev.

More people were told to evacuate Monday from areas south of Chadron, Neb., on the fourth day of fires that have scorched nearly 80 square miles.

About 45 to 50 people were affected by the latest evacuation orders, and hundreds of others evacuated over the weekend were kept from their homes.

Four rural houses have been destroyed and several more damaged since lightning sparked the fires last week.

In Montana, more firefighters, equipment and aircraft arrived Monday as crews fought to corral a fire that blew up rapidly in Glacier National Park over the weekend, fanned by strong winds and blistering heat.

Firefighters got some relief Monday with calmer winds and lower temperatures, but officials said the fire □ estimated at 34 square miles □ still posed a threat to the gateway community of St. Mary.

The blaze came within a mile of the town over the weekend. The National Park Service on Sunday evacuated its administrative site there, as well as several area campgrounds.

Most of the park remained open to visitors, officials said.

Residents of a subdivision in central Oregon were allowed to return late Monday as crews tamed a fire there, though evacuation orders remained in effect for another 500 residents of two subdivisions near the tourist town of Sisters.

The subdivisions appear to be protected from the 14-square mile fire, which is 30 percent contained, said Scott Brayton, a fire spokesman.

An evacuation order was also lifted for several dozen residents near Weaverville in northern California after a wildfire that destroyed one home calmed down.

In Idaho, a 5-square-mile fire in the mountains fed on bug-killed evergreen stands as it neared a cluster of vacation homes and a mining museum.

More than 70,600 timber and range fires have burned on federal land so far this year, higher than the 10-year average of 50,984, according to the National Interagency Fire Center. Because of unusually large early-season range fires in Texas and Oklahoma, the acreage burned so far in 2006 is 5.5 million, compared with a 10-year average of 3 million acres for the same period.

I may be the only one on this list who wasn't aware of this site but, in case I'm not, there is an awesome web page to have a look at. If you are at all interested in sir tankers, their types, history and evolution point your browser to:
http://www.airtanker.com/index2.html

If this is a duplication, my apologies but I had never heard ot it until a friend informed me last night.

Steve any particular reason you need to know who is on the teams?

As a state agency the team members are not kept under lock and key, but there is really no need to publish the list of CDF and local government personnel outside of CDF and the agencies involved.

CDF has chosen at this time not to follow the FS lead and create websites for their teams.

The teams mission is to mitigate whatever the hazard they are assigned to and return home, no muss, no fuss. If a community is involved in the hazard area, the team member repersentive's will meet with the towns folks and discuss their concerns.

Sorry to those who don't speak acronymic...Yes it is Major Incident Command Team...you know that team of people that get called in on major incidents. CDF had them, USFS has them...they are everywhere. I think you can find the teams for USFS but haven't been able to find them for CDF...sshhhhh your not suppose to know who they are!

tks, Steve

Hi all,

Just a quick note to the group to invite you to check out a few images
that I took while at a vegetation fire west of San Jose yesterday.

http://www.firedailynews.com/article.cfm?id=329

Not much in the way of flames, but as always, the air show was awesome!

Cheers...

Craig

Wasn't really looking for names exactly. I was just wondering
if correlation could be made when like Prevention 2525 is told
to call ECC immediately, if he belongs to one of the teams could
it be a call out for the team. Thats all I was looking for.

10871. New CDF Web site for Incident info

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-01 23:11:23 UTC
From: Glenn
Topic: 10871 Message: 10871

Received this today from our director. Sorry if you have this all ready.
Glenn

Our communications and legislative staff has been doing a stellar job in every CDF Unit and in Sacramento. One of the major criticisms after the 2003 Firestorm was our ability to keep the legislature and the public informed with accurate and timely information. Our communications and legislative staff has worked tirelessly keeping legislators and the public informed. We have added a feature on the Governor's website called "Battling California's Wildfires" at <https://exchweb2.fire.ca.gov/exchweb/bin/redir.asp?URL=http://www.calfires.com/> http://www.calfires.com/

When CDF teams are activated, the unit requesting the team puts the order into ROSS, the team IC on call is then called by North or South Ops to confirm they can take the assignment, then North or South Ops puts the order out using ROSS. A call is made over the state intercom advising the units, including contract counties since they have the state intercom that Team ? has been activated and check ROSS for their orders.

Units usually page out their folks via alpha pagers or radio pagers for team activation. Phone calls are still used also.

Hope that helps.

By the way if there were some way the scanner world could hear the intercom traffic, you would really see how things are done. But that ain't going to happen anytime soon.

But CDF is getting closer to their CAD being on the web for the CDF family, so maybe the general public will gain access to its data, like CHP site in the future.

They declared Junction Fire 100% contained this evening. I heard earlier a faller had an injury - yellow jacket bite to the tongue. Swollen, but he could still talk. Ouch.

Oregon Mtn Caltrans cam is back up and running. It's pointing at the ground now. Can't quite tell if the weeds have black around them from a quick burnover or it's just shadows and dirt. http://www.dot.ca.gov/dist2/cctv/oregonmt8.shtml

Another job well done I think. Now we can start figuring out what else is burning around us. My attention is starting to focus on the Kingsley Complex in Mendocino National Forest. Com45 is doing communications for that. Command is 169.175 Forest Net. The majority of the fires are right around Plaskett Meadows and Snow Glade off of Forest Highway 7.

10879. "Turtle" fire in Humboldt Co

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-02 02:33:36 UTC
From: Mark Ward
Topic: 10879 Message: 10879

Humboldt CDF is working an incident near Turtle Lake, most of the action is on CDF Local 151.25, with air attack on scene and a helicopter on order from Willow Creek. AA reported that 2-WD engines probably can't make it in, so Fortuna was loooking for 4WDs, but he doesn't sound very optimistic about it. Two 500-series engines (who are they, USFS?) working their way over logging roads in under AA's guidance.

There are two Turtle Lakes in Humboldt, one near Larabee Valley off Hwy 36 and one near Weitchpec and Hwys 96/169. I can't tell from their messages which one, but it sounds like Weitchpec.

Helicopter 794 is enroute, but after he makes his current drop he's being pulled off the fire to return to Orleans for assignment to another fire. This is the Turtle Lake near Weitchpec, not too far from the Orleans Complex fires.

There's an Engine 23 also getting close to the scene. Last report unless this turns into something.

Gruppe,
I've been out a lot today and away from my desktop scanner and my handheld needs recharging so I missed alot.
What's causing all the smoke up yonder Monterey County way all day?
Late this afternoon into this evening a rather thick bank of smoke began coming into view from the east and headed SW towards my south, say SLO way.
I did catch one communication on 151.280 where a tanker pilot said something about "...so they want me to drop part of my load..." and then something about where to put it relative to the terrain.
Does anybody know about this fire?

Redding.com:

Fires force closure of Marble Mountain wilderness area

By Record Searchlight staff
August 2, 2006

YREKA ☐ The Uncles Complex and Happy Camp Complex, primarily the Titus Fire, caused fire personnel to close the Marble Mountain wilderness area, Suphur Springs Campground, Norcross Campground and several unnamed forest service roads today, said John Zapell, a spokesman for the Klamath National Forest.

The closures will continue until the fires are fully suppressed, Zapell said.

The estimated containment date for the Uncles Complex is Oct. 3, while the Happy Camp Complex is scheduled for Aug. 16, according to a U.S. Forest Service Web site.

Incident: Happy Camp Complex Wildfires
Released: 2006-08-05 11:00:00

Helicopter Crashes Into Klamath River

Happy Camp, CA ☐ A contract helicopter assigned to the Happy Camp Complex wildfire crashed into the Klamath River approximately 10 miles south of Happy Camp around 7:45 p.m Friday. Two pilots aboard the helicopter did not survive the crash. The accident site has been secured and an investigation is ongoing.

...RED FLAG WARNING IN EFFECT FROM 3 PM THIS AFTERNOON TO MIDNIGHT PDT
TONIGHT FOR SCATTERED THUNDERSTORMS AND DRY FUELS FOR FIRE WEATHER ZONES
620...622...623...624...625...280... 281...282...284 AND 285...

THE NATIONAL WEATHER SERVICE IN MEDFORD HAS ISSUED A RED FLAG WARNING
...WHICH IS IN EFFECT FROM 3 PM THIS AFTERNOON TO MIDNIGHT PDT TONIGHT.
THIS WARNING IS FOR OREGON ZONES 620...622.. 623..624...625 AND
CALIFORNIA ZONES 280...281...282...284 AND
285.

THIS WARNING PERTAINS TO THE ROGUE RIVER NATIONAL FOREST...FREMONT
WINEMA NATIONAL FOREST... HART MOUNTAIN WILDLIFE REFUGE ... MODOC
NATIONAL FOREST...SHASTA-TRINITY NATIONAL FOREST...THE KLAMATH NATIONAL
FOREST IN OREGON AND SISKIYOU COUNTY OF CALIFORNIA EXCEPT FOR THE UKONOM
DISTRICT...AS WELL AS OREGON STATE AND BLM LAND IN JOSEPHINE...
JACKSON...KLAMATH ...LAKEVIEW AND CALIFORNIA STATE AND BLM LAND IN
SISKIYOU AND MODOC COUNTIES.
THE NATIONAL WEATHER SERVICE HAS ISSUED A RED FLAG WARNING FOR
INCREASING THUNDERSTORM ACTIVITY SUNDAY AFTERNOON AND EVENING. A NEARLY
STATIONARY LOW PRESSURE SYSTEM OFF THE CENTRAL CALIFORNIA COAST WILL
BEGIN TO MOVE NORTHEAST TODAY.

MOIST SOUTHERLY WINDS AHEAD OF THIS LOW WILL HELP DEVELOP SCATTERED
THUNDERSTORMS ACROSS THE REGION. THESE THUNDERSTORMS ARE EXPECTED TO BE
WET WITH LOCALLY HEAVY RAIN POSSIBLE. NUMEROUS LIGHTNING STRIKES
ASSOCIATED WITH THESE STORMS WILL OCCUR BOTH WITHIN AND OUTSIDE OF THE
RAIN AREAS. IN ADDITION WINDS MAY BE STRONG AND GUSTY IN THE VICINITY OF
THESE STORMS.

A RED FLAG WARNING MEANS THAT CRITICAL FIRE WEATHER CONDITIONS ARE EITHER OCCURRING NOW...OR WILL SHORTLY. A COMBINATION OF LIGHTNING AND DRY FUELS WILL CREATE A HIGH POTENTIAL FOR NEW FIRE STARTS.

AA 06 is arriving at incident. C205 put its crew on the fire
and says they think they have containment. C205 is trying to
lead the land resources to the fire and also awaiting c805
(which I believe is one of the chinocks) arrival time.

After hearing Jake's NorCalScan.org scanner, I decided it was time to have one dedicated to Butte County. For those of you that are in Butte County and want to listen, it can be found at http://www.thenet411.net.

I'm still pretty new to scanning so I may have some questions for yall in the coming days.

Looking forward to talking with you!

Thomas Miller

From where I sat at 3AM (outside LOL), it wasn't particularly exciting and looked mostly cloud-cloud, but with the VERY limited view, I have no doubt it was very pretty elsewhere. :)

Having an antsy 40-lb dog trying to crawl into your shirt does tend to distract one just a touch. ;)

It'll be interesting to see what we find as strike starts, as the week goes on.

Thomas--it sounds great, but those of us with software that's a bit behind (and hardware, too--I'm on dialup) get told that our Windows media player has to be updated etc...and that gives me far too many bells and whistles for my computer to easily manage if I want to do more than listen.

Can you do a WinAmp like Jake's?

Also, White 2 and 3 are very common tact. freqs used here....between those and Oroville Tac 1 (whatever that is LOL), you might want to add a few more.

Other than that, awesome idea and VERY fast-loading site. Looks great!

The third stream in the list of streams is for WinAmp users. I was made aware early on that support for older computers and dialup was a necessity. I think my current setup will support just about everyone.

**********UPDATE: OFFICER KILLED**********

CALIFORNIA HIGHWAY PATROL (CHP) REQUESTS STATEWIDE ALL POINTS BULLETIN FOR
SUSPECT VEHICLE WHICH STRUCK AND KILLED AN OFFICER.

ON 08-05-06, AT 10:35 P.M., A CHP OFFICER WAS STRUCK AND KILLED BY A HIT AND
RUN VEHICLE WHILE INVESTIGATING A TRAFFIC COLLISION ON THE 66TH AVENUE
ON-RAMP
TO NORTHBOUND I-880 IN THE CITY OF OAKLAND. THE VEHICLE WAS LAST SEEN
TRAVELING NORTHBOUND ON I-880.

THE SUSPECT VEHICLE IS A 1992-1998 CHAMPAGNE-COLORED BUICK LESABRE WITH
COLLISION DAMAGE TO ITS LEFT FRONT AND GRILLE. THE GRILLE IS MISSING ITS
LEFT
CORNER AND "BUICK" EMBLEM.

AN ADDITIONAL VEHICLE OF INTEREST POSSIBLY ASSOCIATED WITH THIS CRIME IS A
SILVER 2000 PONTIAC GRAND AM WITH A CALIFORNIA LICENSE PLATE OF 5GAA778.
THE
OCCUPANT/S SHOULD BE CONSIDERED ARMED AND DANGEROUS.

IF EITHER OF THESE VEHICLES ARE LOCATED, IMMEDIATE CONTACT THE CHP BY
CALLING
1-800-TELL-CHP.

CHP ENTAC/JKC

This was Helitanker 790 (N6156U) from Heavy Lift out of Apple Valley, I talked to a member of the Northern Arizona Incident Team who is in charge of this fire, and he told me that the helo had also been out of service for engine change out the day before. (Just an FYI, they were based here in Prescott AZ for the last 3 summers and I knew the crew, also while they were working a fire on the Prescott NF this summer here in AZ they had to go out of service for 2 days for engine change out. I dont know if this has anything to do with it or not, but im sure NTSB will be looking into it.)

10938. NorCal Lightning fires

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-07 20:22:38 UTC
From: steve_j80917
Topic: 10938 Message: 10938

For those who haven't noticed NorCal is being overwhelmed with lightning fires. Presently in Shasta, Trinity, Mendocino NF, Siskiyou and a few others. We have smokejumpers, repellers and probably most of NorCals air assets working on them. None of the new fires have reached a point of a major incident (yet). Today's storms are winding up to throw more lightning NorCals way so I imiagine there will be more fires today and tonight.

Shasta expanded is on 151.265 Command 2 for the lightning fires. One can be seen on the side of Shasta Bally (which took some jumpers this morning) 171.575 Shasta/Trinity USFS is busy also.

Very large storms in the mountains around the valley right now. Came home around midnight last night to significant lightning to the east, north, and west of Red Bluff. We'll see if anything moves down into the valley tonight. Trinity County got hit hard today.

I just heard a Red Flag Warning broadcast on the LNF afternoon fire weather broadcast. Sounds like another night of activity. We have had lightening with some rain the last two nights in Chico.
I posted the RFW statement here in another message.

10943. REd Flag Warning issued-dry lightening, winds

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-07 23:16:18 UTC
From: nitrobear@comcast.net
Topic: 10943 Message: 10943

WWUS85 KREV 072246
RFWREV

RED FLAG WARNING
NATIONAL WEATHER SERVICE RENO NV
345 PM PDT MON AUG 7 2006

CAZ270-278-NVZ458-080400-
/O.NEW.KREV.FW.W.0008.060807T1900Z-060808T0400Z/
SURPRISE VALLEY CALIFORNIA-EASTERN LASSEN COUNTY-
NORTHERN WASHOE COUNTY-
345 PM PDT MON AUG 7 2006

...RED FLAG WARNING IN EFFECT UNTIL 9 PM PDT THIS EVENING FOR DRY
LIGHTNING AND GUSTY WINDS...

A LOW PRESSURE SYSTEM CONTINUES TO MOVE INTO NORTHERN CALIFORNIA
AND WILL TRACK TRACK INTO SOUTHERN OREGON TUESDAY. SCATTERED
THUNDERSTORMS CONTINUE TO DEVELOP AND ARE EXPECTED TO PERSIST
UNTIL AROUND 9 PM THIS EVENING. THUNDERSTORMS WILL MOVE QUICKLY AND
ALTHOUGH THERE WILL BE SOME RAIN FALLING OUT OF THE CORES OF
STORMS...RAINFALL WILL NOT BE WIDESPREAD AND HEAVY ENOUGH TO PREVENT
THE POTENTIAL FOR NEW FIRE STARTS. STRONG OUTFLOW WINDS OF OVER 40
MPH ARE ALSO POSSIBLE NEAR ANY THUNDERSTORMS. A STEADY WEST TO
SOUTHWEST WIND OF 10 TO 20 MPH WITH GUSTS TO NEAR 30 MPH WILL
CONTINUE THROUGH THE EVENING WHILE RELATIVE HUMIDITIES ARE EXPECTED
TO REMAIN NEAR 15% INTO EARLY EVENING BEFORE SLOWLY RISING.

A RED FLAG WARNING MEANS THAT CRITICAL FIRE WEATHER CONDITIONS
WILL OCCUR.

While it's great to have the scanner when I can't have the computer, I have to admit it's a little hard to hear over the panting of the Canis nervosa. :)

Pity. I LOVE a good storm and with a phobic dog, I so rarely get to go play in one.

Good luck to all firefighters--Oroville's been getting significant winds (quit laughing Bob in Weed WindTunnel!) all day. :)

Only a light breeze today; 5 mph gusts to 15 mph.

A lot of lightning activity this afternoon in eastern & western Siskiyou county; nothing here in the Weed area yet. A lot of smoke chasing going on.

~Bob in "usually windy" Weed.

Anyone know where to get good info on the NDF? I just visited Carson City and I belive there's an air base in Minden. I'm going back soon and I'd like to know who's around there.

I had the opportunity to see a fire in the Toiyabe National Forest on the Nevada side and was thrilled to see smoke jumpers landing over the fire. Not to mention the huge skycrane they use for water.

Years ago, I used to fly gliders off the Douglas county airport. There was a tanker base there for many years and I'm sure still is. They used to close down the glider op's when they had major movements of tankers in and out of the airport for some reason. (I guess they didn't like dodging us in the pattern since we had the right or way per FAA rules.) I seem to remember that is was USFS operation but that may have changed over the years. Great BIG airport with lots and lots of room for just about any combination of operations. Not sure how the runways have been maintained. Some of them were a little rough when I flew there. I think it was an old WWII strip maybe. Too much airport for a local venture thats for sure!

Hmmm. Being a Fed incident, they would likely be Unimog-based fire
engines.

NDF has 24-hour dispatch at Elko Dispatch and a "day only" dispatch at Sierra Front (Minden). Reno dispatches them when Sierra Front is closed. Their southern resources near Las Vegas may be dispatched by Clark County. NDF is going through a lot of changes right now. It's hard for those of us who work for the Feds in Nevada to keep up with what NDF is doing. There is still an Air Tanker Base at Minden Airport, primarily funded by the USFS. I think NDF is trying to re-establish an air program, mostly helicopters, but I haven't heard much about it. They have an honor camp program (several throughout the state), kind of like CA, but the crews aren't trained as well as the CDF crews. They're broken up into 12-person squads that get put together to form 24-person crews when a type 2 hand crew is requested. The web site listed by other posters gives pretty info on how NDF is broken into Regions.

NDF Primary - 158.895
Red - 159.345
Red 2 (crew net)-158.865

10953. Copter crash victim remembered

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-08 08:14:46 UTC
From: elsiebea1
Topic: 10953 Message: 10953

http://www.theunion.com/article/20060808/NEWS/108080113

Friends of a seasoned helicopter pilot killed last Friday while fighting a Siskiyou County wildfire fondly remembered Monday his years in Nevada County.

The investigation into the crash near Happy Camp that killed Terry "Jake" Jacobs, 58, now of Kern County, is continuing, according to the National Transportation Safety Board. An autopsy will be held today or Wednesday, according to Susan Gravenkamp of the Siskiyou County Sheriff's Department.

The co-pilot was also killed in the crash of the large Sikorsky helicopter into the Klamath River about 7:45 p.m., but his name is being withheld pending notification of kin out of the country, Gravenkamp said.

"He's the only guy that I ever let fly my plane," said Del Langhorst, 61, of Nevada City and a close friend of Jacobs for the past 18 years. "He was a Vietnam chopper pilot and then he did commercial transports, flying sheep and cattle to Australia and Europe."

Dave Parker, 58, of Nevada City, said Jacobs lived here for about 10 years during the 1990s, working on and off as a contract helicopter pilot and contractor.

"He was a gentle, sweet soul, and people enjoyed his company," Parker said. "He flew the big, huge Sikorsky Sky Crane and he had thousands of hours" of flying time.

Gravenkamp said Jacobs' company, Heavy Lift Helicopters Inc. of Apple Valley near San Bernadino, had experience flying in the area of the Happy Camp complex of wildfires he was fighting. But the area is steep and treacherous where he crashed into the river along Highway 96, about 10 miles southwest of remote Happy Camp.

Langhorst said Jacobs grew up in Indiana and learned to love aviation while working at an airport. He held a degree in engineering from Purdue and once devised a plywood and Styrofoam system for building walls that he never patented but which is widely used today.

"He always had ideas,' Langhorst said. "He was always known as Jake and he had the best-looking girlfriend you ever saw."

Langhorst said he did not know the girlfriend's full name but that she lived with him in Wofford Heights near Lake Isabella. Jacobs never married, but he had a brother and sister in the Carolinas and a mother in Florida, who died in recent years.

"He was a pretty good character," Langhorst said. "We were both pilots, and you hate to see pilots go down."

The investigation into the crash will likely take several more days, according to a spokeswoman at the National Transportation Safety Board office in Southern California.

Good question...

I didn't know anything about Uni-mogs until I moved to Winnemucca. We
use them here just like engines. In fact, we don't differentiate when
dispatching. For the most part, Uni-mogs are just like engines, but
they have a blade on the front, like a dozer, and they can adjust
their tire pressure to help them navigate better over sandy soil. We
have a type 3 Uni-mog/engine and a type 6 Uni-mog/engine.

Unimog is a Mercedes-Benz go anywhere vehicle used primary in Europe and Africa with military origins. The tend to be maintainence intensive but have excellent off road articulation and clearance. Factory options include tanks up to 1600 gallons, CAFS, etc.

Here is a link to the factory sales PDF:

Jack:

No clue, they were fueling up this morning when I was washing the semis. I haven't had a chance to check back out that direction. Didn't see any unit IDs, just the little BIA emblem on the door.

On an off note, the last incident we were on in SD had a bunch of BIA crews on it. It was a dud and we ended up at home a lot quicker than the initial dispatch had planned.

With the SITREP looking a lot busier today, I doubt we'll be home for long this time.

From: nitrobear@comcast.net
Topic: 10965 Message: 10965

Hwy 32 and Woodland Park Drive was original dispatch but nothing found. Batallion spotted the smoke at the bottom of the canyon in the Butte Ecological preserve, (where ever that is) now staging at 14 mile house and hwy 32 and awaiting a copter to check it out. That could be a tough area if something got going. Winds are up canyon now but not very hot today.

Actually, it's not too hard to get down there and there are roads going in and out at several places. They've had fires down there before. As long as they stay towards the bottom, they're ok. It's when they get up into the forest land near the ridgetops that things will get nasty.

Subject: [NorCalFire] BTU chasing a smoke in Big Chico Creek Canyon

Hwy 32 and Woodland Park Drive was original dispatch but nothing found. Batallion spotted the smoke at the bottom of the canyon in the Butte Ecological preserve, (where ever that is) now staging at 14 mile house and hwy 32 and awaiting a copter to check it out. That could be a tough area if something got going. Winds are up canyon now but not very hot today.
Woodland IC was the designator on 151.400
Tac 9 is tactical
no air tactical yet

Mike is correct in that it is pretty accessible. It's steep and if something gets going down there, especially with an up canyon wind behind it, could be in Forest Ranch quickly. Interesting development was that apparently the Butte County Sheriff copter came up the canyon at a low level and the air tactical spotted it and called off the other air assets until she could call off the sheriff copter. I didn't hear how that worked out but she didn't sound real thrilled to see the unannounced copter show up!
I don't' think there were any tankers in orbit, just the AT and maybe another copter on the way in. Was funny to listen to but, Safety first of course!

Here in Winnemucca we're down to just 2 Uni-mogs (they're way too
expensive to repair). I'd be really interested to find out if
anyone else has mogs in their areas.

Look for help with EASTBAY PARKS FIRE
I was told bye another scanner friend that during fire season I
sould listen to
EasT bay PARKS fire during fire season I thought he was nuts so I
try it today
IT was very busy today on 44.640 after doing some work this it
came as a big
Surprised to me find out that they have a fairly good size force of
Engines, THEY DO HAVE A AERA of 95.000 acres of wlldland to watch
They have 4 type 4 Engines and 10 type 3 engines
Can anyone help me with the number system
add anyone add to this list

5600 5630 ADIM
5650 5660 UNKNOW
5660 5670 TYPE3 ENGINES
5680 5690 TYPE 4 ENGINE

THANK YOU CAN ANYONE anyone help

I listen to Paradise Fire in Chico whenever there is some major fire up there, it comes in no problem. I have no interest in listening to Paradise PD, but I would assume it would come in with similar strength. The altitude change should make it line-of-sight to most areas in Chico to Paradise, so there shouldn't be much of a problem with at least the repeated frequencies.

For those who were talking about NDF activity, there is a new, rather nasty looking fire near Verdi, NV, just over the CA/NV border, west of Reno.
No report on it's size but wind is pushing it east towards a new looking subdivision it appears.
KCRA Ch 3 in Sacramento just had a piece with video on the news. My Topo USA shows it to be out of the Toyiabe NF boundy so it must be NDF juristiction?

10991. Stanislaus NF - Lumsden Fire

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-12 04:53:48 UTC
From: George.Cusack@alldata.com
Topic: 10991 Message: 10991

T.1S., R.17E.-R18E.
This fire is near the bottom of the Tuolumne River Canyon, downstream of Hetch Hetchy, ENE of Groveland, north side of the river at the base of Jawbone Ridge.
At 2030:
Columbia tankers long gone due to long shadows.
Columbia AA and C 404 on scene. AA wanted an empty copter with a bucket. What he got was a copterload of helitackers with no place to park.
No Stanislaus NF engines or crews on scene - just what sounds like a Forest Service Patrol.
CDF engine and crew strike teams on order from Tuolumne-Calaveras and Madera-Mariposa-Merced. Dozers on order.
I would not post this small fire except for the prognosis by AA: "If we don't get crews on it soon, it will burn through the gel and run up to the top of Jawbone. Then we'll have a big airshow in the morning".
At 2130: IC on scene but strike teams still enroute. Principal access is from Jawbone Station to the north. IC reports no good locations for engines to set up. Hand crews are hiking in.
All traffic tonight on Forest Net: 168.750.
Will post in the AM if this fire runs.

From: Mike L
Topic: 10993 Message: 10993

Prescott NF E30 Type 3, Bradshaw RD
Tonto NF E38 Type 3, Mesa RD
Prescott NF E63 Type 3, Verde RD
Kaibab NF E14 Type 3, Williams RD
Kaibab NF E34 Type 3, North Kaibab RD

These are ones I know off top of my head, there are other, we only have 1 engine left on the forest here in Prescott AZ, local FD's have been jumping new starts with the fuels crew and half of them are gone as well

Not much information to update on the Verdi. Reno Gazette Journal paper reports 5,000 acres and 10% contained. Some good images and video at their web page worth a look: http://news.rgj.com/apps/pbcs.dll/article?AID=/20060812/NEWS10/608120337/1016/NEWS

10996. Uncles comples, Klamath NF

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-13 02:07:14 UTC
From: nitrobear@comcast.net
Topic: 10996 Message: 10996

Just had a look at Inciweb and noted an incident that I missed I guess. Uncles complex on the Klamath. Is that where I'm hearing occasional Air Tactical traffic on 151.290? I haven't heard anything there today.
Incident Contact: Cathleen Thompson (530) 462-1534
Incident: Uncles Complex Wildland Fire
Released: 2006-08-12 13:53:00 EST
(Klamath N.F.) Fire suppression efforts continue on two large fires (Uncles and Hancock) in the Marble Mountain Wilderness and one large fire (Rush) in the Trinity Alps Wilderness areas that started from lightning on July 23. Firefighters continue to work in areas of extremely steep slopes and difficult accessibility.
Isolated, interior torching was reported yesterday on the Rush Fire?s exposed slopes. Flame lengths of less than two feet were also observed on all three fires. Yesterday, the Infra-Red imagery flight showed a minor acreage gain on the Uncles and Hancock Fires. A revised Wildland Fire Situation Analysis, incorporating the Uncles and Hancock Fires, will result in a long-term implementation plan for both fires.
The air mass will warm a few degrees from yesterday as the trough over Siskiyou County weakens and begins to lift out of the area. Humidity will be down slightly as well. Offshore flow will develop overnight resulting in warmer temperatures on the mid-slopes to the ridges and lower humidity recovery overnight. The inversion should be minimal over all fires today. Firefighters expect fire behavior today to be similar to yesterday and should expect fire behavior to change relative to changes in slope position, aspect, and steepness. Vegetation continues to dry outside of wet drainage bottoms on mid and upper slopes. A warming trend is forecasted for early next week.
Initial attack (IA) on new fires within the IA responsibility area continues to be the firefighter?s primary objective.
To ensure public safety during fire suppression activities, a temporary closure is in effect for the Marble Mountain Wilderness including portions of the Pacific Crest Trail. For more information about smoke and area closures, visit the Klamath National Forest website at: www.fs.fed.us/r5/klamath.
Total Area Involved: 10,468 acres, 35% contained. Structures Threatened: 0
Expected Containment Date: 10/03/06 Costs to Date: $ 6,950,000.
Resources Committed: 15 crews, 4 helicopters, 4 engines, 10 water tenders, 4 camp crews.
Total Personnel: 570 Injuries: 5.
Resources Threatened: The North Fork of the Salmon River watershed; Late-Successional Reserves; and wilderness values.
Today?s activities include the following:
Rush Fire: Approximately 4,846 acres. The Rush Fire was declared contained last evening. Today, fire crews will continue to mop-up the majority of the fire perimeter. Rehabilitation of the west and north firelines continue today. Structure protection is in place along the southern boundary of the fire.
Uncles Fire: Approximately 2,272 acres. The fire is projected to continue to burn towards the northeast. Firefighters will be containing hot spots along the southern perimeter of the fire. The fire will be patrolled by air today and cooled by water drops as needed.
Hancock Fire: Approximately 3,350 acres. Today, crews will perform an aerial reconnaissance of fire perimeters along Wooley Creek and at the confluence at Hancock

Creek. Fire crews will cold trail and extinguish hot spots along the southeastern fire perimeter. The fire will be patrolled by air today and cooled by water drops as needed. ** SPECIAL NOTE: The Uncles Complex Incident Command Post has relocated to the rodeo grounds at Etna, California. The ICP Information Center phone number is (530) 467-1537.

Date: 2006-08-13 17:56:29 UTC
From: Erik
Topic: 10448 Message: 10997

Well, I was incorrect. Apparently, a *Uni-engine* is a fold-a-tank with a portable gas-powered pump. They fill the thing with copter buckets, fire up the pump, and add some hose. I think a different name would be better, as it initially makes me think of a mobile piece of equipment.

Division T up in Somes Creek has been abandoned apparently due to fire activity. IM Team had everyone back off to Salmon River road. The fire will reach there by tommorow, and also hit Hwy. 96 again. Size right around 9800 acres. Need 15 T3 engines by A.M. shift for structure protection.

The favorite named incident I was on was the ZigZag fire in HUU

many years ago, near Orick. Crown fire in about 5 redwoods on the

coastal bluff lasted 3 days. 1 each CDF and Erickson sky crane

copters. Water no problem, drop down from the bluff to the ocean

like a elevator ride. Someone decided no salt water could be dropped

on fire. Must go to the Klamath River for fresh water, 15 min round

trip. Dosen't the nightly fog in the trees contain large amounts of

salt? Maby the trees will go into fresh water shock.

North Zone has assigned 3 more crew strike teams to the incident -
9255G, 9230G, & ???.

I think I heard Copter 901 go onscene at 110PM

Peter sz at 128PM PDT

Fire is making a hard push toward Oregon Peak and the lookout. NEU has downstaffed the lookout for safety reasons. IC just requested 2 additional Lima strike teams (Dozers). Also, aircraft are at a premium due to other fires. Have orders in for a Type 1 and Type 2 helicopters that can not be filled. IC reports heavy spotting in timber.

have any freq's. Sounds like its near my place....

---------- Original message ----------
From: Jerry Haun <j.haun@...>
Strike team 3300C from Yuba county enroute to large fire at
Marysville rd and Old Dobbins road in the Yuba county foothills no
fire name yet or IC. Many departments responding evacuation under way
all Yuba county off duty sheriffs being called in.

Curently working on NEU local for command: 151.325, but they are trying to get either CDF Command 1 or Command 2 but having problems with the repeaters. That area is known for bad radio reception.
Aircraft are working on Air Tactics 4: 151.280

CDF Command 1 = 151.355

CDF Command 2 = 151.265

Havn't heard which tac they are using.

All Tankers (90, 93, 96, 91, and 92, I think... all I could hear) and other air resources have been released from Olsen IC in SRF for the night; I believe Olsen AA said the fire is contained.

Also at 19:00 HUU forming a ST consisting of E1285, 1260, 1279, 1281 and 1265, to rendezvous at Stafford off and at Giuntoli to go to SHU. No further info.

This morning, the fire is 442 acres @ 75% contained. They were able to fire out the dozer and handlines last night and hit the know spots. Concern today is a NW wind that is suppose to surface later today. Warmer temps and lower humidities should show any spot fires that went undetected last night in the Oregon Peak area.

From: Keith
Topic: 10902 Message: 11051

Per the NTSB report, the aircraft suffered a failure in the tail rotor assembly. One of the four tail rotor blades seperated from the tail rotor assembly and has not been found as of the preliminary report.

..."The spindle fracture surface was flat in appearance and displayed arch-shaped marks that emanated from one of the edges through about half of the spindle material. It was noted that the location of the fracture would not normally be visible in an assembled component."...

Based on that statement, it would be safe to say that the aircraft suffered a mechanical failure. The fractured spindle was removed from the rotor hub and shipped to NTSB lab for further testing. There is not indication that the aircraft came in contact with anything prior to the accident.

11052. Skycrane Incident on the Klammath

From: Jim Acker
Topic: 11052 Message: 11052

Today's news reports state that it was the hub of the tail rotor that fractured. One blade has not been found. The engine was successfully changed 2 days prior.

From: fcdl36x7s3
Topic: 10902 Message: 11053

Essentially NTSB is reporting the loss of one of the 4 blades on the tail rotor. Auto-rotation can be accomplished, but low speed, high torque (carrying full load) is the absolute worst time to occur. Even the best pilot would have a hard time recovering in that situation, let alone in a canyon.

The tail rotor blade sheared at the spindle, which wouldn't have been seen visually unless there was a tear-down. Not to re-open the fixed wing / rotor debate, but it's interesting that it only took a couple of crashes and they were ready to ground the whole fleet of fixed wing. I haven't seen too many crashes in the heavy lift category, but there are a fair number of firefighting helicopters (mainly contractor) that go down every year with no large outcry. I'm not saying there should be any grounding, it's just the nature of the machine, and it's interesting to see the difference.

A short excerpt from the report:

witness located near the accident site reported that he observed the helicopter come in and out of the same dip site that day filling the helicopter's water tanks. The helicopter was located over the dip site when the witness heard a "loud bang." He realized something was wrong with the helicopter and ran down his driveway toward the road that paralleled the river. When he reached the road he observed the helicopter flying over a stone riverbed toward the Independence Bridge. He then noticed a large piece fall off the helicopter, which was later identified as the tail rotor gearbox with three of the four tail rotor blades attached to the hub. The helicopter pitched nose low at an approximate 45-degree nose down attitude while rotating around its vertical axis. The helicopter impacted the opposite side of the river/shoreline. The witness called the USFS over a radio to report the accident.

There are normally four tail rotor blades in the tail rotor assembly. Attached to the tail rotor hub is a spindle for each blade. A sleeve assembly is placed onto the spindle and secured by a threaded nut and lock washer. The blade is attached to the spindle via a collar located at the blade root. The collar is bolted to the sleeve assembly. Each blade is identified by a colored-coded attachment collar and spindle/sleeve (red, yellow, blue, and black). Examination of the tail rotor system revealed that the blade associated with the red collar/spindle was missing and has not been located at the time of this report's writing. The spindle (part number 65112-07002-047) was fractured inboard of where the sleeve assembly would attach to the spindle. The spindle fracture surface was flat in appearance and displayed arch-shaped marks that emanated from one of the edges through

about half of the spindle material. It was noted that the location of
the fracture would not normally be visible in an assembled component.

Update from Air Attack. Now 5 acres with spotting. Structures out in front of the fire. Air attack requested an additional 5 engines (closes resources), 1 crew strike team, and 1 dozer. Basicly doubled the initial high dispatch. No ground resources on scene yet. N39 9.5 x W 120 56.4. Dispatching a Local Gov S/T.

11060. Re: CA-NEU-Rollins IC

Off Hwy. 174 between Grass Valley and Colfax. 174 is open, but chp just shut down Red Dog-You Bet Rd. The campground is on the back side of Rollins lake, ie; north-eastish. Heavy brush, miles of it, with mixed forest. Very hilly terrain with mostly dirt road access. Some residences.

About 3-4 mi. away from me as the crow flies. I live just underneath GV AAB. They're kinda quiet right now, but the boys were rattlin' my roof pretty good just a little bit ago.

Fire stopped at 30 acres. Heavy mopup, but they are beginning to release / re-assign resources. NEU still has a heavy committment due to the Marysville Incident (442 acres of timber and oak woodland)that started on 8-16-06. That incident still has 5 crew and 2 engine strike teams still assigned.

Achtung gruppe!
Fourteen years ago today the Fountain Fire began in the Round Mountain/Montgomery Creek area of eastern Shasta Co. along Hwy. 299 as a result of an arsonist.
The fire burned 636 structures in and around that area and charred 63,960 acres.
I've since heard accounts from more than one source that firefighters could hear many exploding meth labs off in the forest in the distance as it burned through the forests of that area.
My family used to own property up in the Montgomery Creek area, but luckily the home now on that property was spared the flames.
The big news story in the Sacramento and Bay Areas other than the fire itself was all the smoke drifting down the Central Valley from it and causing health concerns and visibility issues.
Several days after it began I was able to get up to Redding and stayed at the Red Lion there and across the hallway the Red Cross had taken over the room and used it as a C.P. and many of their vehicles were out in the parking lot in back.

Achtung gruppe!
Fourteen years ago last Wednesday the Old Gulch Fire started in Calaveras County due to vehicle fire on Old Gulch Road. It went on to burn 117 structures and char 17,386 acres.
It jumped Hwy 4 from the north and threatened to make its way into the Stanislaus River Canyon to the south which firefighters feared would happen but they were successful in preventing that as it merely slopped over Hwy 4 burning very little there.
Unfortunately the fire was a "stand replacement event" where it burned elsewhere in that area.

From: Kim Noyes
Topic: 11074 Message: 11074

Ten years ago last Wednesday the Cottonwood Fire began in Sierra County near Loyalton and went on to burn 46,800 acres, but thankfully no homes but it did make three runs on the town trying to get in.

11079. Re: New Start NEU-Foresthill Incident 16:30 - UPDATE

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-21 01:25:10 UTC
From: sandrserve1
Topic: 11076 Message: 11079

42.6 acres (18:21), kept fire from jumping the road(s). Pretty much winding down.

Only 2 tankers and 2 helos remain. The heavy T23 out of Chico got a couple of licks in. T82 and T83 as well as T93 have been released. C404 and C205 are in the mix; C205 down at Auburn, returning in the AM.

Incident is in the Auburn area. Map @ http://eldoscanner.servebeer.com/foresthill.htm

Also using CDF Tac 5 151.250.

This just out. During the fire, a fire engine received "significant damage" while protecting a structure. No firefighters were injuried. Apparently, it rolled over it's chock block and down a hill for about 200' and then rolled over on the driver's side. This is all preliminary information.

Sounds like there are several fires working. North Ops just released
the following information.

New Incident, Cow fire (CA-SHU) 5 to 10 acres, moderate rate of spread.

New Incident, Fender fire (CA-SHF) 1 to 2 acres, moderate rate of spread.

No information on freqs yet, but you can listen in at:

http://www.redding.com/redd/scanners

11121. Two fires in/near Yosemite?

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-22 01:00:03 UTC
From: Jordan Hayes
Topic: 11121 Message: 11121

I flew to Denver today and we went pretty much right over Yosemite. I saw one fire that looked like it was inside the park, on the north side. I also saw another one that was more like in the southern part of the park ... were these some of the ones you've been posting about today? I live in the Bay Area so I'm not so good at the geography of many of these posts.

Thanks!

/jordan

Apparently my corporate email server is in severe slug-mode just when
I need it the most! :((
I posted that message on the incident name nearly a half hour before..
There was no EAS or Code-20 issued, apparently (and rightly so) SO
supervisors wanted to make sure of the situation before blowing the
panic horn. Looks like another one for the books unless something
else blows up.

11125. Re: Two fires in/near Yosemite - Boundary Fire

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-22 01:22:06 UTC
From: Keith
Topic: 11121 Message: 11125

Initial 209 places the fire at 56 acres @ 0% contained. Fire is actively torching groups of trees with short crown runs. Spotting distances out to 400 yards have been observed. Fire is burning in lodgepole pine and red fir. Fire cause remains under investigation. Suppression response is in place with aviation resources and hand crews being the principle resources utilized. Fire is within designated wilderness in a high-use area. Significant smoke impacts to Yosemite Valley are expected tomorrow. Heel of fire is less than one mile from the lip of Ribbon Falls.

11127. help on Redding Scanner feed

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-22 01:58:07 UTC
From: Brian Verhalen
Topic: 11127 Message: 11127

Have tried to listen to the Redding scanner feed from Redding.com but
am having trouble with Windows Media Player.
When I click on County Scanner, Media Player comes on & tries to
connect, but then I get a message:

The server received invalid data from the client on the control connection.

I then clicked on Web Help & received the message:

Windows Media Player Error Message Help

You've encountered error message C00D0032 while using Windows Media
Player. Additional information is not currently available for this error.

Error code COOD is issued by Media Player, but OO32 is not listed in
there error list.

What is wrong? Something I am not setting up correctly or ???

Am running Windows XP Pro & Media Player 10

Thanks for any ideas or help on this.

Brian

WEST CENTRAL NEVADA BASIN AND RANGE-NORTHERN WASHOE COUNTY-
311 PM PDT TUE AUG 22 2006

...RED FLAG WARNING IN EFFECT FROM 11 AM TO 9 PM PDT WEDNESDAY..

THE NATIONAL WEATHER SERVICE IN RENO HAS ISSUED A RED FLAG
WARNING...WHICH IS IN EFFECT FROM 11 AM TO 9 PM PDT WEDNESDAY.
THE FIRE WEATHER WATCH IS NO LONGER IN EFFECT.

AN AREA OF LOW PRESSURE OFF THE CALIFORNIA COAST WILL MOVE
THROUGH NORTHERN CALIFORNIA AND NORTHERN NEVADA ON WEDNESDAY. THIS
LOW WILL PRODUCE WIND GUSTS AS HIGH AS 35 MPH WEDNESDAY AFTERNOON
AND EVENING.

VERY DRY AIR WILL REMAIN IN PLACE ON WEDNESDAY WITH MINIMUM
HUMIDITY VALUES OF 5-15% OVER WESTERN NEVADA AND NORTHEAST
CALIFORNIA...AND 10-20% FOR THE LAKE TAHOE BASIN. THE COMBINATION
OF DRY AIR AND GUSTY WINDS WILL CREATE DANGEROUS FIRE FIGHTING
CONDITIONS ON WEDNESDAY.

A RED FLAG WARNING MEANS THAT CRITICAL FIRE WEATHER CONDITIONS
WILL OCCUR.

++++++++++++++++++++++++++++++++

With the way fires have been burning, things could get very
interesting tomorrow.

Topic: 11138 Message: 11138

while working last night, smelled strong odor of rubber burning and went outside and saw smoke building north of me. turned on the scanner and heard a three alarm fire going off grove st. near cypress and bechelli ln.

around 11 PM a fire in a unocupied house caught fire and quickly spread to another unocupied building and a shed storing documents in back of allied Title company off cypress. as far as I know all three buidings were totaled.

as I drove by to go home around 6:30 am the shed, what was left of it, was still smoldering pretty good.

the news (below) reports flames as high as 50-60 feet in the air. a gas station (usa) was nearby (off cypress),about a block away, but was not threatened during the fire. that would have been hell there.

anyways heard engines from st. 42 (shasta lake city), and 46 (anderson) there. alot of mutual aid.

==========

Crews battle late-night fire
August 24, 2006

A late-night, three-alarm fire engulfed a building at 461 Grove St. in Redding and quickly spread to neighboring businesses.

Redding police closed Grove Street at Bechelli Lane and Rosemary Avenue at East Cypress Avenue, and were restricting traffic on East Cypress.

The blaze was reported at 11:13 p.m., Shascom officials said. At midnight, the fire was still spewing thick, black smoke as flames reached an estimated 50 to 60 feet high.

The flames were concentrated in the area behind the former Affordable Furniture & Oak, which faces East Cypress.

Businesses in that area include gas stations, auto detailers and restaurants.

Two Firefighters Deploy Emergency Shelters On Mudd Fire North Of Elko NV - Treated & Released

Incident Contact: Mike Brown (775) 748-4141

Incident: Mudd Fire
Released: 2006-08-24 10:45:00 ET

Two firefighters staffing a BLM fire engine from the BLM-Bakersfield District (California) during initial attack were involved in a burnover and emergency fire shelter deployment at approximately 1700 on Wednesday, August 23 while participating in initial attack operations on the Mudd Fire, located five mile north of Elko, Nevada.

The two firefighters were transported by ambulance to the Northeast Nevada Regional Hospital in Elko, where they were treated for minor to medium burns and released late in the evening on August 23.

An accident investigation team is being assembled and will examine the circumstances of the incident.

New fire breaking out near Honey Lake, HWY 395 north of Reno. Multiply aircraft and immediate need strike teams requested. No size yet, but a report from Tanker 88 and 89 (Grass Valley AAB) advised of 5 structures involved upon there arrival.

Per North Ops, fire is moving towards Plumas NF East side escarpment. NEU just launched a immedate need strike team, Type III to form up at the scene. SHU also has a S/T enroute.

One thing I've found is that most deputies are terrified of anything they can't shoot and stop, in this case, fire. Having done lots of wildland fire evacuations over the years, what wouldn't even phase or worry a firefighter as far as "fire danger" or risk or how close the fire is to the road has deputies panicked and putting the pedal to the floor.

Mike

Final acreage - 90 @ 100% contained. Multiply roadside starts due to a motorhome that caught fire. Quick use of all agencies and aircraft prevented a potential major incident. Unified command with Janesville Fire Protection District. Damage assessment shows 2 Residences, 2 Commercial and 11 outbuilding destroyed.

Good stop by fire resources. I've fought fire in that area and fire can show some erratic behavior at the drop of a hat. This is the same area as the Eagle Fire burnover.

Hi Dennis. That fire in Tehama/Glenn was a 6 acre burn at the base of Hogsback rd where pavement reaches dirt. Copter 205, 2 tankers, quick mobile attack on one flank and helitack crew on the other kept it from spreading north. Started about 5pm-ish.

11151. Request: "Eagle Fire Burnover - 1989"

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-26 03:04:48 UTC
From: Keith
Topic: 11151 Message: 11151

Kim: Here's a quick summary of the Eagle Fire Burnover:

"On July 7, 1989 at approximately 1427 hours, a vegetation fire was reported 5 miles south of Janesville in the Lassen/Modoc Ranger Unit. This fire was located on the west side of Highway 395. During the first few hours, the fire burned actively along and adjacent to Highway 395 in both north and south directions; extreme fire behavior was experienced primarily due to erratic wind conditions.

On the morning of July 8, the fire behavior conditions were moderate, as the day progressed, fire activity increased and the behavior again became extreme.

At approximately 1430 hours, Engine 2387 was traveling southbound on Highway 395 toward the southeast portion of the fire when they observed a spot fire on the east side of the highway; they initiated a 1 ½" hoselay down the bank. This crew was joined shortly by Engines 4474 and 2379. A total of 5 Firefighters were working on the spot and had achieved knockdown at which time a large fire whirl developed on the west side of the highway. Rapidly increasing in size and intensity, the whirl crossed the road and in the ensuing blow-up, four of the Firefighters sustained serious burn injuries."

What makes this burn over standout is the fact that is was taped by a news crew from Reno. The entire burn over and post emergency treatment including air evac. was filmed. It's a great training tape to review adverse fire behavior and how to handle an incident within an incident.

RDN is the mutual aid designator for City of Redding. If a Redding Fire unit is responding to a CDF call in the Mutual Threat Zone ("MTZ" area around the city limits that both city and county/cdf respond to) than Redding units will announce themselves over CDF frequencies as "RDN Engine 3" etc. You'll hear CDF respond to fires in the city limits as "respond MTZ with the city"

Keith,
Thanks for the explanation.
I know exactly what you're talking about now as I've seen clips of that incident many times but didn't know many details other than the general area and the general timeframe.
I'm fascinated by tornadoes, dust devils/whirlwinds, and fire whirls/tornadoes so this topic always piques my curiosity.

LNF is working a new start up near the High lakes which is East and a little South of Philbrook reservoir if I heard the dispatch correctly. Air tactical is on scene, along with a heavy tanker from Chico and copter 510, from Chester I think. I haven't heard the IC designator. It will be awhile before the ground troops get in as it's very remote up that way. Wonder if it's a sleeper or a bow hunter start? No logging in the area according to the AT. From what I've heard, it doesn't sound like it is going anywhere very fast. Copter 510 guessed the fire elevation at ~7K'
Susanville dispatch: 172.225
Air Tactical on 166.675

"High Lakes" include a series of about 8 small lakes at the Butte County/Plumas County boarder (just on the Plumas side) above Philbrook. It is an off-road (ATV and 4x4) recreation area and camping area. In most areas, heavy duty 4x4 only... While you can do some of "High Lakes" in a stock SUV, you'll beat it up pretty good and likely come out with some damage. Other parts of "High Lakes" can't be done at all in anything less than a heavy-duty, after-built, old-style 4x4 (Jeep CJ5/CJ7, Toyota Landcruiser, or a few well built trucks).

LATs and LONGs are:

40 degrees, 00.7615' N
121 degrees, 23.5006' W

Datum: WGS84

I will be surprised if Type 3 engines can get to anything in there except the first lake (Spring Valley). Likely, it will be handcrews and helicopter crews only...

I was up there many years ago on a dirt bike and remember it as pretty "rough". Fine for a bike as long as you kept an eye on the fuel as it's a long walk out! I haven't heard any traffic regarding this fire or seen anything on either the LNF site or Inciweb so they must have it controlled.
Thanks Mike for the information. Your lat/long put it a little west of
Spring Valley lake I think?

From: Jake H
Topic: 11161 Message: 11164

I was listening to this on my way down the hill from weekend on Lake Almanor. I pulled out of Chester right when they started toning. Lots Lake or something (not Letts Lake, that's Mendocino) but that was the name of the incident. Lots IC (or something very close to "Lots") and access was off the Humbug/Humboldt Rd. I was able to hear LNF dispatch on a tone deeper in the forest until I hit Mineral. All static then. So that's probably why you Chico guys didn't hear much. I think they were working off of Dyer Pk or someplace deep. I don't think the tanker got on scene, they turned him around with 512 out of Quincy showed up. Didn't get the number in the static but it was less than an acre initially. Up a slope and a good hike in for engines. I think 2163 and a USFS rig made it as close as possible and started hiking in. That was about the last I could understand before descending into hel...I mean the lovely 100 degree valley.

Command was on Lassen Fire Net (as opposed to Lassen Forest Net). Did they rename Admin Net or Service Net to Fire Net? Or is this a new freq?

11165. RE: [NorCalFire] Start on LNF, High Lakes

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-29 05:57:37 UTC
From: Larish, Michael
Topic: 11161 Message: 11165

Actually, I have no idea where the fire is itself. The LATs/LONGs were simply where the normal entrance to "High Lakes" is to get people oriented.

Mike

Just south of Oroville, grass fire, moving northward; if crosses 70,
'Dingerville' trailer park will be directly threatened.

Smoke heavy and CHP expedite requested. Closure of hwy 70 requested from
Ophir to Palermo roads.

Appx 4-5 acres, moderate spread. Access off Palermo Road into the field.

It should be Philbrook IC so probably in the area of Philbrook lake. There are abour 5 air tankers, 2 copters and C205 will be enroute shortly, AA210, another lead aircraft and lots of ground resources enroute. With the wind that is suppose to be up there today (Red Flag warning in effect) it could get nasty. They have also requested a heavy tanker and copter.

Anyone have a decent location on this fire? I don't have a quad map for that area and can't find my old LNF map. Susanville put it at T25N, R4E in section 11. W6JRY has a cabin up there and he thought it was west of the dam but from the sound of the reports, that doesn't ring true.
I heard the AT say it would go to 150 acres tonight and that it has topped a ridge and was "backing down" the other side. Anyone heard a Lat Long?
Thanks

I heard the IC, Philbrook IC, tell Susanville that there was no need for any evacuation in the Philbrook "community". No idea where that evacuation order came from he said. An evacuation from Philbrook would be pretty difficult at best.

From: Jake H
Topic: 11176 Message: 11180

The red dot on the topozone link below is where that legal is (Section 11). I also heard them mention multiple times "it is backing down the north side of the ridge" and fire behavior has moderated. Topozone shows a ridge due north of the actual lake. It could have been there, or the ridge on the humboldt/humbug road. Tankers seemed to be returned a hair earlier than I thought. Depending on turnaround at Chico, it seemed like they could have squeezed in another tanker run before cutoff time if they wanted to. Who knows though - computer task chair quarterbacking here.

Lassen Forest Net 172.225 is on 2nd priority now on the norcalscan.org live scanner.

Topozone link (zoom in on scale from 100:000 to 50:000 to see actual roads and detailed contour lines.

11181. Another Redding Arsonist Arrested

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-08-30 22:56:16 UTC
From: hosgs1@webtv.net
Topic: 11181 Message: 11181

here's another arsonist arrested in reddng this week.

he's suspected of setting the fire off grove street behind Allied Title Co. and a room in a heathcare facility + some veg fire's

story below..

-Ron

==========

Suspected arsonist arraigned

Man police think started Grove Street blaze jailed

By Lauren Brooks, Record Searchlight

August 30, 2006

A 32-year-old Redding man, whom police suspect started last week's Grove Street blaze, was arraigned at Shasta County Superior Court on suspicion of starting a fire at Beverly Healthcare on Gold Street, according to court records.

A public defender was appointed for Thomas Gary Drumm, and his bail was set at $250,000 during Tuesday's arraignment. Drumm was arrested on suspicion of one count of arson and booked into the Shasta County jail Friday. Police questioned him throughout the weekend, Capt. Peter Hansen said.

Police are asking the Shasta County district attorney's office to add three charges against Drumm -- one for the multiple-structure fire on Grove Street and two for vegetation fires, Hansen said.
Police suspect Drumm started the fire that burned a garage, house and warehouse behind Alliance Title Co. on Grove Street last Wednesday, Hansen said. Police also questioned Drumm about a vegetation fire next to Beverly Healthcare on Aug. 20 and another one on North Bechelli Lane last Wednesday, Hansen said.

The small fire in a rehabilitation room at Beverly Healthcare caused about $1,000 in smoke damage, but no injuries were reported, he said. The fire on Grove Street caused more than $400,000 in damage.

The Redding Fire Department began the investigation and worked with Redding police and the Bureau of Alcohol, Tobacco, Firearms and Explosives. Drumm became a suspect during the investigation. He's a janitor who worked for Beverly Health Care and lived a short distance from Grove Street, Hansen said.

In 1997, Drumm was charged with five counts of arson and later found to be mentally incompetent to stand trial, according to court records. He was sent to Napa State Hospital, but it is unclear how long he was there.

The charges against Drumm were dismissed in 1999, according to court records.

A preliminary hearing for Drumm is tentatively scheduled for Sept. 13.

Reporter Lauren Brooks can be reached at 530-225-8215 or at lbrooks@....

Thanks Jake,
TopoZone eh? I'll have to take a look. Section 11, at least the SE 1/4 of it, would put it pretty close the dam on the west end of the reservoir All right. I haven't heard much more today but did hear some AT traffic while I was out in my truck on 151.220 which sounded like it was related.
I also heard the AT pulling the tankers off "early" but my assumption was that the shadows were pretty long up at that altitude now that the sun is slipping south towards fall.
Thanks again Jake!

I was driving back from bay area, just north of Vacaville when this broke. I think Paradise Captain 2 was first on scene. He called for 10 engines, any type and closest, 2 additional air tankers, a dozer and two copters from what I heard. He said there were structures threatened and sounded pretty much out of breath.
I went through the hills on 505 and only heard bits and pieces. Where was the "golf course" that the copters were landing at? Was that the one right on the Skyway? I thought the fire was further up the hill in the town of Paradise.
Kudos to the IC. He really threw the horsepower to it and sounds like they knocked it down pretty well. Good work!

hey guys and gals,

did the fire depts, cdf, etc change to a new plan or something? these firemen/women/pilots are really doing a awesome job getting these fires before any major developments (towns,multiple structures etc on fire) this season so far (not over, keep our fingers crossed)

just this season that, well last year was ok on the main attack but his year huge response and sometimes litte, based on the resorce and they still get it.
luck maybe?

what do the group think or know why it is......

btw...sorry for the spelling errors in my post was never good at it or write to fast but anyways every time i click on spelling check in webtv it disappears and i have to write it all over again so I quit using it.

From: Dan James
Topic: 11200 Message: 11201

Ron, The season is just getting going and yes, the troops have been dong a good job. But some of the things to think about are as follows. Fires are powered by fuel and Oxygen. They increase in velocity due to lack of fuel moisture, Topography, and weather. The fuel moisture's are very low during this time of the year so we get many starts. The absence of any winds helps keep fires small. Another factor is available equipment to put on the fire while it is small. As long as only a few fires are burning locally we have lots of Engines, Hand Crews, and especially Aircraft to throw at the fire. The old expression is "hit em early and keep em small". If we get several major large fires going in the state that swallow up lots of equipment and manpower the response time increases and the chance of catching a fire while its small lowers. If the North wind is blowing and the Rh is low, that seems to turbo charge the fire and it gets big really fast. I hope this helps. danfromord

We were just commenting on that at the firehouse today. It seems as though everything is knocked down quickly, within a couple of hours. Perhaps it is new technology? CDF's S-2 tankers are so much faster than in the past and carry a bigger payload. And now we have the DC-10, which the fire folks in Washington State are raving about. Plus, everyone seems to dump a ton of people and equipment on the first alarm.

We just don't get the big fires like we did in the 70s, 80s, and 90s. At least not as many. My personal opinion is that the greatest technological advance in the science of keeping wildfires, or any fire for that matter, is the cell phone. Reporting parties use to have to find a phone to call 911. That could take a lot of valuable time. Not anymore.

I can remember the days of walking out back of the firehouse and see a column of smoke building in the distance. We would be the first call to dispatch. They now have tons of CHP 911 transfers before they even ring the firehouse bells. Heck, we even watch the CHP webpage and have seen the calls coming in on "most recent."

Art & all,
The technological advances in firefighting and reporting are directly proportional to the magnitude of the fire threat as more and more interface zones are created by encroaching development out into the boonies and as much of the wildland gets increasingly overgrown due to generations of overly successful fire suppression as ironic as that sounds.
When a civilization tinkers too much with a natural system there is ALWAYS a price to pay somewhere down the line.
California has been very fortunate since 2002, the last really bad fire year for both halves of the state.
The events of October 2003 were as bad as they were limited to a two week period in Southern California. Otherwise, that year was rather forgettable, mercifully.
Since then things have been sub-par in both 2004 and 2005.
It's too soon to let our hair down about 2006 as historically this month and next have been two of the three worst months out of the entire year for fires here in California.
The relative quiessence of recent years will not last.
There is a natural ebb and flow to the intensities of fire seasons here and luck/divine providence has seen fit to give us a brief and temporary respite which will not last.
As certain as death and taxes we will experience truly horrible fire seasons in the future, our wonderful technology and tactics notwithstanding.
All of us here, both members of the fire service and non-members alike have seen fires for which Tanker 910 would not make a darned difference nor anything else built or formulated by mankind.
We would be wise to not start congratulating ourselves too quickly about our technology and tactics. Ours are the very best in the entire world and in the entirety of human history but we human beings in the overall scheme of things are very weak and powerless in the face of the might of the natural world unleashed.

11207. A lack of disasters...

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-02 08:01:20 UTC
From: Pamela Alley
Topic: 11207 Message: 11207

All I can say on that one is: Be glad. Be very glad. And be ready, because sooner or later.......

Speaking for myself, a layperson not in fire or law, since I began scanning with any seriousness (relatively recently--like 5-6 years), I have been absolutely IMPRESSED by the area's emergency services. Even in the wildest times, everything gets covered quick and smooth for the most part. Response times are, to me, outstanding, and frankly, I'm very glad I live where I do.

But anywhere can blow up, anytime, and when I look hard at what's been happening, I'm seeing a couple of things that might be of interest.

People are more aware of fire danger, especially after the losses suffered by rich, seemingly-immune SoCal communities, where absolutely nothing seemed to make a difference except time. No rhyme, no reason, everything just burned.

To the layperson, that's really scary. And it makes you think very hard when you go to landscape, or to buy....and with property prices the way they have been, more places got cleaned up REALLY squeaky for sale.

The new ideas of letting some fires burn for management's sake scare the snot out of some people, and again, it makes them THINK. (Ok, maybe not very much but every little bit helps.)

Improved cellphone coverage, I think, is definitely a factor (along with the fact that EVERYONE seems to think they're a necessity and ALL of the phones dial 911 regardless of race, creed, or payment status. :) Makes it a lot quicker and simpler to contact emergency services, plus with several callers, it's a start on a triangulation for best locating by the nearest lookouts.

Anyone else noticed that it seems to have been a more humid year this year?

Unfortunately, there are some disasters, like flood or disease outbreak, that nothing can help with but to plan, to practice, and to prepare. And with everyone's help and a bit of publicity in the right places, I think NorCal has a pretty good whack at getting through them, too.

Let's all keep the good thoughts going that this year stays a smooth one. Weather changes are no respector of wishes, but let's do it anyway. :)

That was quite profound. Are you a writer or poet?

kimnoyes@... wrote:
Art & all,
The technological advances in firefighting and reporting are directly proportional to the magnitude of the fire threat as more and more interface zones are created by encroaching development out into the boonies and as much of the wildland gets increasingly overgrown due to generations of overly successful fire suppression as ironic as that sounds.
When a civilization tinkers too much with a natural system there is ALWAYS a price to pay somewhere down the line.
California has been very fortunate since 2002, the last really bad fire year for both halves of the state.
The events of October 2003 were as bad as they were limited to a two week period in Southern California. Otherwise, that year was rather forgettable, mercifully.
Since then things have been sub-par in both 2004 and 2005.
It's too soon to let our hair down about 2006 as historically this month and next have been two of the three worst months out of the entire year for fires here in California.
The relative quiessence of recent years will not last.
There is a natural ebb and flow to the intensities of fire seasons here and luck/divine providence has seen fit to give us a brief and temporary respite which will not last.
As certain as death and taxes we will experience truly horrible fire seasons in the future, our wonderful technology and tactics notwithstanding.
All of us here, both members of the fire service and non-members alike have seen fires for which Tanker 910 would not make a darned difference nor anything else built or formulated by mankind.
We would be wise to not start congratulating ourselves too quickly about our technology and tactics. Ours are the very best in the entire world and in the entirety of human history but we human beings in the overall scheme of things are very weak and powerless in the face of the might of the natural world unleashed.

11213. Ridge IC Update #2

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-02 21:16:59 UTC
From: Pamela Alley
Topic: 11213 Message: 11213

Spot fire still less than 1/4 acre but in light flashy fuels and old growth manzanita, has good wind on it and spreading.

Requesting two additional tankers for total of 4.

Air Tac agrees, heavy brush/timber, still on the ground at this time.

14:16

11214. Ridge IC update #3..multiple spots

Yahoo group: norcalfire (2005 — 2016)

Its that time of year folks, fer sure we gonna have a good time on da river on Labor Day. ya-ya we gonna be makin sure da tubers keep safe ya know. So if yer in da area of Chico or Hamilton City you can listen in on all da fun.
Your friend, Oly
Ok folks here is all that I know,
Law command is usually on Clemars and Fire/Rescue is usually running on White II. The CHP will be on their Brown Channel and you may even catch some info on Calcord. Briefing is usually at 0900 hrs at Irvine Finch Park and I will try and fill you in on all the Freq's after briefing. If your planning on comming out and testing your sunscreen make sure you have a Sober driver to drive you home. We don't need any more excitement on this long and busy day.

They have 4 tankers now (88,89,93,94, think) and 3 copters working this incident. The new AT is catching up with what was a pretty active air show. I heard the first AT discussing how to get troops to the fire. They painted one of the flanks and walked in some ground troops from the heel. Heard that this was a spot start from a previous ridge fire I think. No discussion of acreage that I've heard.
I am still not sure where this is? I have found Big Ridge Road, which has been mentioned but can't find Little Ridge road which is also in the area. From the sound of it, it must be closer to Brush Creek than Berry Creek? The intersection of hwy 169 and Big Ridge Road has also been mentioned.
Tankers are refilling at Grass Valley due to "controller overload" at the Chico air show with lots of departing traffic. Just heard 94 coming out of Chico.
Anyone know size of this incident? Big air show probably due to limited accessibility. Nothing about it on the web that I've been able to find.

Air Tactics on 151.290 MHz, lots of traffic
Tac 12 has also been mentioned for ground troops
Air<>ground is on 151.220 MHz off and on.

I was also very surprised not to see this on here, and there's nothing on the TrinityCam page either. It started this morning on both sides of Hwy 299W near Big Flat (15-20 miles west of Weaverville) in Trinity County. They have over 300 FF's working it and I heard at one point it was 900-1000 acres in size, but I like to wait until it's out to really pay any attention to the acreage because it always changes.
There are updates until 8:30 tonight on Q97 country radio and on www.Q97country.com.

11221. CA-ENF-51 Fire

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-03 15:06:13 UTC
From: Keith
Topic: 11221 Message: 11221

Fire is located southeast of Pollack Pines, El Dorado Co, CA.
Currently 45 acres @ 10 % contained. Critical resource needs include:
6 air tankers, 4 Type II helicopters, and 10 Type I or IIA crews.
Started in heavy logging slash, transitioned into timber with bear
clover under-story. Slow to moderate rate of spread, spotting so far
not an issue, but time will tell.

This fire has been determined to be human caused and started last
night around 2200 hours.

From: Pamela Alley
Topic: 11224 Message: 11224

Air Tac requesting additional chopper, additional tanker for total of 2 and 3 respectively. Multiple reports of vegetation fire; lookout said moderate spread, entering brushy fuels.

Ok, airtac said hold on tanker and copter, looks like it's minimal in spread and not threatening structures as yet...should be a prompt pickup.

Anybody catch the tac freq?

So what did I just hear on BTU local on this incident? Prevention unit
radioed in that he is behind a vehicle, two guys got out with a gun and
shots were heard. CHP doing traffic control on the fire respond quickly.
Also other prevention units (prevention units are armed law enforcement)
started responding code 3 until it was stated CHP at scene and situation
under control.

New start near Hwy 20 and Timbuctoo Rd. AA230 was airborne on dispatch and was first in. Reported to be 3 acres in grass and brush. Making small runs with the wind. Requested additional dozer and crew. Power lines are down making access a bit difficult. Operations are on CDF Tac 2.

For those of us crazy enough to try a more complex scanner, there is now a Yahoo! group just for the Uniden BCD 996T.

The group is just getting started. If you have spent any time at all with this scanner, you know how complex and feature rich it is and how hair-pulling it can be to figure out.

If you already own or are considering a Uniden 996T add this Group to your list of Yahoo! groups. Between all of us, maybe we will find someone who has all the answers.

Personally, my 396 & 796 works fine. I don't know why I had to add the 996 to my life - but I did, and I along with others, can always use help in making it work.

Please add this group to your list if you are a 996 user:

http://groups.yahoo.com/group/BCD996TGroup

Thanks,

JIM

You are here: National > California > Shasta - Trinity National Forest > Bar Complex (oven/bake/pigeon) Wildland Fire Bar Complex (oven/bake/pigeon) Wildland FireIncident Information Announcements News Pictures Maps Incident Contact: (530) 623-9195

ANNOUNCEMENT
Pigeon Fire / Highway 299 Road Closure
A new fire east of Big Flat started at approximately 9:50 AM Saturday. As a result of fire fighting efforts, Highway 299 is closed West of Junction City, Calif. and East of Big Bar, Calif. until furt... below, near bottom of page....

Summary
Burnout operations on north perimeter completed. Burning over next 2-3 days over east perimeter south over Limestone Ridge to strengthen and improve line. Fire pushed into North Fork of the Trinity drainage above Whites Creek on SE corner of fire. Critical needs are based upon maintaining current operational strategies and time limitations for crews and air resources. Concerns and possible solutions over possible road/area closures due to safety issues affecting pending hunting season are being explored. New perimeter based on updated strategy.

Basic Information
Updated 2006-09-03 20:22:10 ET
Incident Type Wildland Fire
Benefits & Objectives
Protect homes and structures in the Denny, Martin Ranch and New River areas.

Minimize fire size while ensuring for firefighter and public safety.

Fighting fire in Wilderness Areas requires firefighters and managers to utilize special tactics, referred to as Minimum Impact Suppression Tactics (MIST). All fires in this Complex are being suppressed using MIST. Dozers are typically not permitted to operate in Wilderness Areas, and have not been used in the Trinity Alps Wilderness area during the Bar Complex suppression activity.

Keep fires from advancing to the south and impacting state highway 299.

Cause Lightning
Date of Origin 07/24/2006 at 0001 hrs.
Location N & NW of Weaverville, Calif.

Incident Commander Don Garwood

Current Situation
Size 27,580 acres
Percent Contained 52%
Estimated Containment Date 09/15/2006 at 1800 hrs.
Total Personnel 513
Fuels Involved 10 Timber (litter and understory) NFFL fuel models 6, 8 & 10. Heavy loading of 1000 hour fuels from past fires and non-fire (insect mortality) in the areas surrounding the fires exists.

Fire Behavior The fire was very active yesterday with gradient southwest winds surfacing in the afternoon. Spotting out to a half mile, with crown runs, group torching was observed.

The fire burned actively until 2200, torching with surface spread rate of 2 to 4 chains per hour. Backing and single tree torching was observed was all night above the inversion.

Today's Significant Events Crews continued to make progress. Crews will continue mop up in Divisions E, F and G. Burnout operations continue in Division M moving south to Division N using aerial and hand ignition techniques. Active fire spread continues in the Pony Creek and the North Fork of Trinity River. Contingency operations in North Fork of the Trinity River are being evaluated. Fire remains well established in Gus Creek drainage, Whites Creek drainage, and tributaries of the North Fork of the Trinity River.

Outlook
Estimated Date of Control
Planned Actions Crews will continue to mop-up lines in Divisions E, F and G and strengthen burn-out lines in Division M. Crews have re-anchored a line from Limestone Ridge and begin fire line construction east to the North Fork of the Trinity River to establish new containment lines.

Projected Movement Fire will continue to move east towards the North Fork of the Trinity River and south towards Whites Creek for several days.

Growth Potential High

Terrain Difficulty Extreme

Containment Target Should pending critical resource orders be filled, the fire may be contained within newly established boundaries.

Remarks Currently unable to provide an accurate fire perimeter due to the ongoing inverwsion and lack of IR flight. The WFSA is being modified.

A new fire near Pigeon Campground started at approximately 9:50 a.m. on 09/02/06. Cause is under investigation. Shasta-trinity NF Crews in addition to crews and aircraft assigned to the Bar Complex responded

with initial attack. Highway 299 is closed west of Junction City and east of Willow Creek, CA. More to follow as developments occur. Trinity River is closed to rafters and other water traffic from Slide Ranch Haul Out down to Big Flat.

Highway, roads, trails closed because of many blazes in area
By Constance Dillon, Record Searchlight
September 4, 2006

The Pigeon Fire near Junction City grew to 3,500 acres by 8 p.m.
Sunday after officials revised initial predictions, said Jim Wilkins,
a U.S. Forest Service spokesman. Earlier in the day, officials had
scaled back their estimates from 1,000 acres reported Saturday to 523
acres, he said.

Highway 299 remained closed late Sunday to traffic between Junction
City and Del Loma and might still be closed today because of debris
from the fire, said a spokeswoman for the California Highway Patrol.

The fire management team in charge of the Bar Complex fires assumed
control of the Pigeon Fire early Sunday morning. Using an infrared
device, firefighters were able to get a more accurate measurement of
Trinity County's latest fire. The Forest Service estimate of 1,000
acres Saturday was made without the aid of such equipment.

The Pigeon Fire continued to burn to the northwest away from
structures late Saturday and Sunday morning. By Sunday evening, it
had taken on the shape on an anvil, spreading to the east and west in
the rugged terrain of the Trinity Alps Wilderness Area, said Chris

Worth of the Forest Service. Strike teams were preparing to do structure protection in the small town of Helena.

The cause of the fire is under investigation.

No structures have been damaged in either the Pigeon or Bar Complex fires, Wilkins said. But evacuations were still in place for the Big Flat area, Sgt. Pete Braga of the Trinity County Sheriff's office said Sunday.

Power was restored late Saturday to residents in parts of Junction City and Weaverville who had been affected when electrical lines were shut down earlier in the day.

The Bar Complex has burned about 27,000 acres since July 26, Wilkins said. It is 57 percent contained.

The Shasta-Trinity National Forest closed several roads and trails Friday because of progression of the Bake-Oven Fire. Visitors are encouraged to stay clear of the North Fork-Hobo Gulch area in the Trinity Alps Wilderness Area, 16 miles northeast of Junction City, said Forest Service spokesman Mike Odle.

"The safety of our forest visitors, especially during the holiday weekend, is paramount," said Sharon Heywood, Shasta-Trinity National Forest supervisor. "We want to impress on people that it is not safe to be on roads or trails in the general vicinity," she said.

People ignoring the closures will be cited.

Forest road closures include Hobo Gulch Road, Miller Ranch Road and Denny Road beyond the intersection of 7N15. Roads are open only to residents of the area.

Closed forest trails include New River, Emigrant Creek, Milk Camp, Semore Gulch, Moliter-Cold Springs, Bob's Farm, White Creek, Papoose, Rattlesnake, Backbone Creek, Backbone Ridge, North Fork Trinity and spurs B&C, Slide Creek, Morrison Gulch, East Fork, Pony Creek, Green Mountain and Salmon-Summit (Potato Mountain to Cecil Lake).

For more information, call the Weaverville Ranger Station at 623-9195.

Pigeon Fire forces evacuations, keeps Highway 299 closed

By Kimberly Ross, Record Searchlight
September 4, 2006

JUNCTION CITY ☐ The Pigeon Fire in Trinity County's Junction City area has grown to 4,360 acres, causing mandatory evacuations and the continued closure of a section of Highway 299, a spokeswoman said late this morning.

The fire was 14 percent contained this morning and is spreading to the northwest, said Susie Rodriguez, an information officer for Northern California Joint Incident Information Center.

Its size has increased from Sunday night's estimate of 3,500 acres, she said.

Mandatory evacuations were ordered for the Big Flat Campground and the community of Big Flat, whereas Sunday evacuations were voluntary, she said.

The fire is considered life-threatening in the communities of Helena, Big Flat and Big Bar, Rodriguez said.

Highway 299 is closed from west of Junction City to east of Big Bar, where rocks and other debris from the fire have rolled onto the road.

It's unknown when the highway might reopen, Rodriguez said.

The COE Incident is essentially contained. Forward progress was stopped by tanker drops. Coe State Park is actually located in the Diablo Range - sometimes referred to as the Mt. Hamilton Range - southeast of San Jose.

CDF SCU requested mutual aid from San Jose Fire for a Water Tender and they received Water Tender 13 and Engine 13.

I have a dear friend whose home is in Foresthill although he's living in PA and hasn't had a chance to move his wife back to join him so she's there alone.
Please keep me informed of this as the house is outside of town in a forest of pines and manzanita.

Ralston Incident, at last report approximately 30+ acres. The fire is
7 miles east of Foresthill and is burning in heavy fuels of mixed
conifer and brush. No immediate cause has been determined.

11252. SHU - Taylor Incident

Yes it does seem the forest let this one get out of
hand they are now evacuating or at least voluntarily
evacuating areas around Foresthill..

This fire is the Ralston Incident which is about 7 miles east of Foresthill. For the last two days, they have been trying to get a handle on it, but it is located in steep inaccessible terrain. This afternoon, it crossed the middle fork of the American River and is now burning in El Dorado County. Placer County has been tapped of a Type III strike team as well as water tenders.

Not sure about the fire in the Tahoe Basin, gut the Ralston Fire near Foresthill has been acting up.
Earlier toiday there were reports that it had jumped the Middle Fork of the American into El Dorado NF. That sent out calls for structure protection for Volcanoville. About an hour ago, I heard ENF ground recon units on Admin Net say it had not jumped but was burning actively on the North side of Oxbow Reservoir. Two minutes ago I heard an El Dorado SO unit on EDSO 2, 159.690, say he had confirmation that it had jumped, but there were no immediate plans for evacs.
In any event, there are engine and hand crew strike teams enroute from Amador-El Dorado.
Besides the frequencies initially posted, I have:
Victor - 136.400
A/G - 169.0875
I am monitoring whatever I can pick up from Amador and will post anything significant. If someone in the group is closer, please jump in.
I believe I just picked up the following ENF location info (it was a scratchy transmission):
13N. 11E. Section 12
That puts it
East of Volcanoville.

11267. Ralston Incident

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-07 23:57:03 UTC
From: Dave
Topic: 11267 Message: 11267

That fire really took off this afternoon and is backing down into the middle fork of the north fork of the American River. It will eventually jump that drainage and make a large run up to the Foresthill Divide.

There is not a lot they can do, other than an air show, as the country is really dangerous with minimal roads and natural barriers.

They are predicting an increase in winds tomarrow out of the SW which will push the fire up the drainages. Which in some respect will lesson the structual problem.

A couple of other freqs I have heard are:

Structual Protection group on white fire #3 - 154.295

And some of the NIFC channels.

Potential for this fire to go for many days and many acres.

Ralston Fire - Voluntary Evacuations Recommended Due To Fire

Incident Contact: Ann Westling (530) 367-6550

Incident: Ralston Fire Wildfire
Released: 2006-09-07 19:12:00 ET

SHERIFF EDWARD N. BONNER RELEASES THE FOLLOWING:

Officials from the U.S. Forest Service, California Department of Forestry and the Placer County Sheriff's Department are highly recommending that residents of the Baker Ranch area east of Foresthill evacuate their homes.

Residents along Baker Ranch Ridge, Baker Ranch Mobile Home Park and along Foresthill Road near Baker Ranch are being urged to evacuate their homes. The Ralston Fire east of Foresthill is moving more rapidly than expected and could quickly reach the area if it continues moving at its current pace.

An evacuation center has been opened at the Foresthill Memorial Hall. Those that need physical assistance in evacuating, such as the elderly or those with mobility issues may call the Sheriff's Department Dispatch Center at 530-886-5375 to request assistance. Residents who have animals can contact Placer County Animal Services at 530-886-5525 to arrange for transportation if needed. Animal owners may also bring their animals to the shelter at 11251 B Avenue, Auburn.

Sounds like this will go to more of an area command team since it is highly likely to end up on the ENF also.. I know earler in the day they had ST9450c, USFS resources going in off the El Dorado side called the Ralston Inc on the ENF also how weird anyways look like a fire management incident until it gets into Foresthill and peoples property are put into jeporady.

How do you figure an area command team? Area command teams manage multiple incidents (usually fires or complexes) in a geographic area. They may well bring in a Type 1 team due to the complexity of dealing with two different forests.

You never know anymore this would generally meet those rules as it will spot across in multiple locations and probably will end up numbering the spots cause they will use different kind of methods to contain them or not contain them, and with the confusion already created from the possiblity of one spot across think about what 10 or might do burning in different drainages in different direction with different potential and concern...

Steve,
Do you use this link? Not always up to date but when there is a major incident, they usually update at least daily.

11275. CA-TNF-Ralston Synopsis

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-08 02:29:36 UTC
From: Keith
Topic: 11275 Message: 11275

The Ralston Fire (CA-TNF-1443) started on 9-5-2006 at 1551 hours near Mosquito Ridge Rd and the Mosquito Narrows. This is approximately 7 miles east of the Town of Foresthill in Placer County. By 0600 on 9-6-06, the fire was 200 acres @ 0% contained and was well established in heavy timber and brush (Lat: 39° 1′ 0" Long: 120° 42′ 9"). The fire burned actively all day and by nightfall was 700 acres, still with no containment.
Nor-Cal IMT 1 (Sinclair) was requested.

Today, the fire made strong runs towards the area of Michigan Bluff as well as up canyon. The fire spotted across the Middle Folk of the American River to the south and has established itself on the El Dorado Forest at about 200 acres. The fire has also burned down to the north fork of the American River. Should the fire jump the north fork, the area of Michigan Bluff will be immediately threatened.

Current 209 shows 1900 acres @ 0% contained. Critical resource needs: 2 Type 1 helicopters, 20 Type III engines, 20 Type 1 or Type 2 IA crews. Due to the very steep, rugged, inaccessible terrain and limited resources, it is not likely that containment objectives will be met. As of this post time, the fire is burning very actively and the headed can be seen of the Sac. Valley floor. Nor-Cal IMT 1 (Sinclair) has taken command

11276. Ralston on the El Dorado

Whatever happens on this side of the American River tonight is going to happen. All El Dorado personnel are heading back to the barn for the night (according to traffic on forest net).
I have heard no indication that they are coordinating with incident command across the river.
And by the way, why is it that most of us "eat", but firefighters "feed"?

Keith,
Well, first of all it wasn't a serious question.
The closest I've been has been "feeding" time on the AEU Spring Exercises at the Growlersberg MKU. Ya, it's a cattle call, but it is also some incredibly good chow.
I'm accustomed to hearing "feeding" on incident traffic, but when I heard Grass Valley tell an engine crew "When you finish feeding, return to your station", I pictured 3 or 4 holsteins in turnouts sitting around a table at Dennys.

Per the Hot List forum: Oplingers Type 1 Team will be taking this incident on Saturday.

Step by step, this thing just keeps getting nastier and it's not because of a sit and wait attitude. Unfortunately, this area ditates that you have to wait for it to come to you and when it does, its has a full head of steam. LCES is Big Time important.

Keith,
My Topo USA plots the Lat/Long you give, on the West of Mosquito Ridge at about 2250' ASL? The Topo program is usually pretty accurate but sometimes I think it needs to be updated when you get down to the seconds.
Thanks for the detail! Looks like a gnarley area to stop one.

Hi George,

Remember this game?? (Guess the new obscure Air Tac channel from the Power&Fred incidents, daily!)

FWIW (and sorry I didn't post this earlier...13 hour workday)

Airshow was on 170.515 (might be 5175).

I'm sure it'll be something new tomorrow.

Pam: LCES is an acronym that is used to identify safety items that should be used / inplace to ensure firefighter safety.

L = Lookouts
C = Communications
E = Escape Routes
S = Safety Zones

These four items should be addressed and briefed to all members of the crew prior to engaging a fire. Basicly, keep an eye on the fire and what it's doing, make sure you have communications, Identify escape routes and your safety zones should things turn ulgy.

Keith

Isn't it true that a firefighter may refuse any order that puts
him/her at odds with one or more of these precepts?

Ralston Fire Wildfire

Incident Contact: Ann Westling (530) 367-6550
ANNOUNCEMENT

Ralston Fire - Voluntary Evacuations Recommended Due to Fire
SHERIFF EDWARD N. BONNER RELEASES THE FOLLOWING: Officials from the U.S. Forest Service, California Department of Forestry and the Placer County Sheriff's Department are highly recommending that re... more
Summary

Fire burned from the bottom of the Middle Fork American River across Mosquito Ridge and over the Mosquito Ridge Road. Conditions include low humidity and very warm temperatures plus very flammable vegetation. There are approx 211 firefighters on scene. Beginning to plan for structure protection for isolated cabins north of the North Fork Middle Fork American River and Michigan Bluff. Mosquito Ridge Road is closed indefinitely due to a rock slide and fallling rocks and debris. The China Wall OHV Staging Area is closed to the public - needed as a helispot.
Basic Information
Updated 2006-09-07 19:30:56 ET
Incident Type Wildfire
Cause Under Investigation
Date of Origin 09/05/2006 at 1601 hrs.
Location 10 miles east of Foresthill

Incident Commander David Sinclear
Current Situation
Size 1,900 acres
Percent Contained
Estimated Containment Date 09/18/2006 at hrs.
Total Personnel 211
Fuels Involved

10 Timber (litter and understory)

Brush and Timber
Fire Behavior

Primarily a backing fire with numerous roll-outs causing short uphill runs. Fire was active during the night.
Today's Significant Events

Outlook
Estimated Date of Control
Planned Actions

Crews will continue to build line on the East and West sides. Hold the fire south of the Mosquito Ridge Road. Keep the fire north of the Middle Fork American River. Begin structure protection plan for the Michigan Ridge subdivision.
Projected Movement

North, East, and West
Growth Potential

High
Terrain Difficulty

Steep, rocky, and hot canyon area
Containment Target

Due to very steep, rugged, inaccessible terrain and limited resources, it is not likely that containment objectives will be met.
Remarks

Nor-Cal IMT 1 (Sinclair) now has command of the Incident.
Weather
Current Wind Conditions
Current Temperature 67 degrees
Current Humidity 29 %
Forecasted Wind Conditions 6-12 mph SW
Forecasted Temperature 95 degrees
Forecasted Humidity 20 %

I'm not so sure the area dictates much of anything have done plenty of successful initial attacks in areas very similiar to this.. Its more like the feds dictate trying to hold this thing with air tankers and smokejumpers then using more initial attack resources... They were trying the same thing on the 51 fire a couple days ago had a handful of feds on the fire placing orders at night for the following day shift so that mean resources would be coming on the line after driving all night if the orders got filled and would of had to go after a hard driving timber fire... It wasnt till the fire was discovered to be on SRA and the feds were relieved did orders start getting filled as immediate need and a comprehensive plan was put in place to stop the fire at less the 50 acres... This was done by hard working initial attack forces that worked their butts off in a coordinated attack to stop the head of it and stop it from becoming a major fire affecting a great recreational spot in El Dorado county...

I certainly remember the Star Fire from August of 2001.
We were celebrating my mom's birthday up in the Gold Country and the night/morning it began we were at Angel's Camp and saw KCRA report that a small fire of about five acres had begun overnight and was burning up yonder and by the time we got into Cameron Park later that morning and while having lunch at the room at the Best Western we heard over the scanner as the female IC reported that the left flank had just blown up and overrun their lines and she was pulling everybody back and she was now asking for anything and everything available given the other fires in the state.
That day and the next we watched it from Crystal View up at Pollock Pines.

11296. RE: [NorCalFire] CA-TNF-Ralston Synopsis

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-08 10:29:21 UTC
From: Mr Tom Attwood
Topic: 11275 Message: 11296

My first post - Want to inject a brief moment of end user concern here. Hope this is appropriate.

We live on a hilltop near Grass Valley, 3000 ft ASL, between Peardale and Chicago Park. Week before last we were locked out because of the Rollins Lake Campground fire. Had a tough time explaining to the grandchildren why Papa and Gramma had such a worried look on their faces.

Tonight my wife tells me that we are wrapped on 3 sides by smoke - when you look at the topo maps it makes sense due to the gaps in the ridges. We're ~9.5 air miles from this one, but the S2's have been dropping right overhead on their runs so you never know... I'm stuck in the bay area, so I can't even copy what's going on, and Mama listens to the scanner like almost everyone else up there but I still get my best intel from this list.

Bottom Line - I really appreciate everyone's reports. For us this is not an intellectual discussion issue - it is a real survival issue. It is a question of when to cut and run. Wish I could contribute more to the group. Our worst case was two years ago when we had ash dropping all around us - the fire was less than 3 miles away.

Hi George,

Remember this game?? (Guess the new obscure Air Tac channel from the Power&Fred incidents, daily!)

FWIW (and sorry I didn't post this earlier...13 hour workday)

Airshow was on 170.515 (might be 5175).

I'm sure it'll be something new tomorrow.

9-8-06 update @ 0730 hrs: Fire is currently 2200 acres @ 0% contained. Fire has established North of Mosquito Ridge Rd. and down to the North Fork of the Middle Fork of the American River and is being held with difficulty. Fire has crossed the Middle Fork of the American River onto the El Dorado NF and burned upslope and upcanyon for another 200-300 acres, threatening powerlines and structures. Fire was actively burning last night with slope runs in heavy brush and timber.

This morning Channel 3 and Channel 10 had live aerial views at 6 am. Due to the southwest wind, the only view they had was on the El Dorado side of the fire. Fire was burning very actively and was exhibiting moderate fire behaivor including some small fire whirls. This is not your typical fire behaivor for this time of day.

Normally, you would expect the fire to lay down and creep due to the increase in humidity, but not last night. It's going to be another interesting day.

Kim: In the IRPG (Incident Response Pocket Guide) there is a process in which a firefighter can "turn down" an assignement. It on page 20. LCES might play a factor during this process.

Pigeon Wildland Fire

Incident Contact: (530) 623-9195
ANNOUNCEMENT

Community Meeting
A community meeting is scheduled for Friday, September 8 at 6 p.m.
Location: Big Bar Ranger Station; meet in the engine bay. more
Summary

Continued fire activity and long range spotting breached the containment lines in Divisions AA and BB (on the north and west flanks). Utility companies have begun work on replacing poles. There may be traffic delays on Hwy 299 due to this work or because of public safety concerns from rolling material. Hwy 299 is open but travel is restricted to a single lane with an escort car between Helena and Mile Marker 35.5. Travelers should allow plenty of time for delays.

Structural threat to Helena, Big Flat, Big Bar and French Bar is being addressed. Big Flat and Helena are under a voluntary evacuation order by the Trinity County Sheriff's Office. The communities of Del Loma and Big Bar are also threatened and residents are encouraged to leave.
Basic Information
Updated 2006-09-08 02:12:57 ET
Incident Type Wildland Fire
Benefits & Objectives

1. Keep the fire north of the Trinity River, south of Waldorf Trail, east of Big French Road and west of Hobo Gulch Road.

2. Protect the communities of Helena and Big Flat. All available air and ground assets will support this operation.

3. Continue direct and indirect suppression tactics to to contain the fire.
Cause Human
Date of Origin 09/02/2006 at 0956 hrs.
Location 14 miles west of Weaverville on Hwy 299

Incident Commander Don Feser
Current Situation
Size 5,511 acres
Percent Contained 25%
Estimated Containment Date
Total Personnel 613
Fuels Involved

10 - Timber litter and understory
Fire Behavior

Fire remains active, limited observations due to heavy inversion layer.
Today's Significant Events

Work continues on power lines and phones that were affected. Big Flat Campground remains closed. Yesterday the smoke inversion suspended aircraft operations, hindering the mapping of the fire's growth. Structure protection measures remained in place. New containment lines have been located and approved.
Outlook
Estimated Date of Control
Planned Actions

Continue to hold the fire north of the Trinity River. Structure protection is in place for the Helena, Big Flat and Hobo Gulch areas.
Projected Movement

Fire is expected to spread to the north, west and east.

Growth Potential: Extreme

Terrain Difficulty:Extreme

Containment Target: Not likely

Remarks

Heavy Smoke is affecting the neighboring towns of Weaverville, Douglas City, Willow Creek and beyond.
Weather
Current Wind Conditions
Current Temperature 75 degrees
Current Humidity 22 %
Forecasted Wind Conditions 3-6 mph NW
Forecasted Temperature 75 degrees
Forecasted Humidity 30 %

11305. Ralston Incident

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-08 19:08:20 UTC
From: Dave
Topic: 11267 Message: 11305

The Ralston fire has taken off early today. Very large header visable now and growing. With the expected pickup in winds this afternoon and evening I imagine the fire will increase in size significantly.

However, the winds at this time appear to be lite out of the SW.

Air Attack was working the copters this morning on the south edge of the fire where it has crossed the river into the El Dorado NF. If it gets established in that area, there is a very definite structual threat to Volcanoville and maybe even Georgetown.

If this has been posted, it didn't make my inbox so sorry if it's a duplicate. Doesn't sound like it's going very well?

--
Nitrobear
Summary
The Ralston fire started in the bottom of the Middle Fork American River. Fire has established North of Mosquito Ridge Rd. and down to the North Fork of the Middle Fork of the American River and is being held with difficulty. Fire has crossed the Middle Fork of the American River onto the Eldorado NF and burned upslope and upcanyon for another 200-300 acres, threatening powerlines and structures. Conditions include low humidity and very warm temperatures plus very flammable vegetation. There are approx 757 firefighters on scene. Structure protection Michigan Bluff. The Mosquito Ridge and the Blacksmith Flat Roads are closed until further notice. The China Wall OHV Staging Area is closed to the public - needed as a helispot. The Ralston Ridge Road will be subject to temporary closure due to rock fall hazard. There will be a public meeting Sept 8, 2006, in Foresthill at 7:00 PM at the Foresthill Middle School.
Basic Information
Updated2006-09-08 20:07:20 ET
Incident TypeWildfire
CauseUnder Investigation
Date of Origin09/05/2006 at 1601 hrs.
Location10 miles east of Foresthill

Incident CommanderDavid Sinclear

Current Situation
Size2,200 acres
Percent Contained
Estimated Containment Date09/18/2006 at hrs.
Total Personnel757
Fuels Involved10 Timber (litter and understory)
Brush and Timber
Fire BehaviorPrimarily a backing fire with numerous roll-outs causing short uphill runs. Fire was active during the night.
Today's Significant EventsMosquito Ridge and Ralston Ridge Roads may be subject to periodic closure due to rolling debris coming downt the roadway.

Outlook
Estimated Date of Control
Planned ActionsCrews will continue to build line on the East and West sides. Hold the fire south of the North Fork of the Middle Fork of the American River. Stucture protection will continue at Michigan Bluff subdivision and the community of Volcanoville. Crews will work on containing the fire burning onto the Eldorado NF.
Projected MovementSouth, East, and West
Growth PotentialExtreme

Terrain DifficultySteep, rocky, and hot canyon area
Containment TargetDue to very steep, rugged, inaccessible terrain and limited resources, it is not likely that containment objectives will be met.
RemarksVoluntary evacuations are curretnly affecting the Michigan Bluff subdivision. Due to the increasing complexity of the inicident, a type 1 IMT has been ordered.

Weather
Current Wind Conditions2-5 mph NE
Current Temperature64 degrees
Current Humidity31 %

11311. Uncles complex?

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-09 04:29:41 UTC
From: nitrobear@comcast.net
Topic: 11311 Message: 11311

I keep hearing on the NOAA weather that there are "areas of smoke" to the northwest of Weaverville. I assume it's the Uncles complex which is reported at 20,2xx acres as of today! Man, that, at least for me, has been a sleeper on my radar screen. It was started by lightening on 7/23/06. It's only 35% contained. Good map and summary if you follow this link:

11312. CA-TNF-Ralston Update

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-09 15:23:44 UTC
From: Keith
Topic: 11312 Message: 11312

Good morning to all. This morning, the Ralston Fire is currently 3,700 acres @ 0% containment. This is up from the 2,600 acres posted on last nights 209. Yesterday, the focus was keeping the fire from jumping the North Folk of the Middle Fork of the American River. They were dealing with a pretty steady wind from the South / Southwest all day in the range of 5-10 mph with higher gusts. Fire is down to the North Fork of the Middle Fork of the American River and is being held with difficulty. Fire has crossed the Middle Fork of the American River and has burned south to the Rubicon River. Fire is established in three major drainages and has potential to grow significantly.

This morning, California IMT 4 (Rocky Opliger, IC) now has assumed command of the fire. The incident is still looking to fill some overhead positions, Type III engines and Type I crews requests. Today's actions will include continuing to build line on the East and West sides. Hold the fire south of the North Fork of the Middle Fork of the American River. Structure protection will remain in place at Michigan Bluff subdivision and the community of Volcanoville. Keep the fire north of the Rubicon River and work on containing the fire burning on the El Dorado NF.

The big issue will be the projected wind shift in the next 24 hours. This low pressure trough that is moving through today will have the winds shift from the SW to the NW starting tonight. High pressure will rebuild increasing temps, dropping the RH and increasing the winds.

Here's a good web site if you want to monitor the fire via internet scanner. http://home.comcast.net/~rrvilla/

There are lots of cabins and single homes all around the area. The main communities are Volcanoville which is about 4 miles SW of the fire. Georgetown which is about 9 miles S - SW of the fire. Both are in El Dorado County. Michigan Bluff which is 1 mile from the fire to the north, and Foresthill which is 4 miles west of the fire.

Here is the update from the Ralston fire this morning.

--
Nitrobear

Summary
The Ralston fire started in the bottom of the Middle Fork American River on Tuesday September 5, 2006. The fire has burned north of Mosquito Ridge Rd. and down to the North Fork of the Middle Fork of the American River and is being held south of the river.
Fire crossed the Middle Fork of the American River onto the Eldorado NF and burned upslope and upcanyon for additional acreage, threatening powerlines and isolated structures.
Branch I (north and west perimeters) was quiet last night.
There are approx 1,185 firefighters on scene. Structure protection remains in place at Michigan Bluff and Volcanoville.
Mosquito Ridge and the Blacksmith Flat Roads are closed until further notice.
China Wall OHV Staging Area is closed to the public and is being used as a helispot.
Basic Information
Updated2006-09-10 11:45:18 ET
Incident TypeWildfire
CauseUnder Investigation
Date of Origin09/05/2006 at 1551 hrs.
Location10 miles east of Foresthill

Incident CommanderRocky Opliger

Current Situation
Size4,464 acres
Percent Contained11%
Estimated Containment Date09/18/2006 at hrs.
Total Personnel1,185
Fuels InvolvedType 10 Timber (litter and understory)
Brush and Timber
Fire BehaviorNighttime fire behavior consisted of backing fire with isolated upslope runs due to hot roll out material.
Today's Significant EventsMosquito Ridge and Ralston Ridge Roads are subject to closure due to rolling debris and downed power lines.

Outlook
Estimated Date of Control
Planned ActionsResources will continue to attempt to hold the fire south of the North Fork of the Middle Fork American River and north of the Rubicon River. Structure protection will remain in place at Michigan Bluff subdivision and the community of Volcanoville. Crews established an anchor point on the south end of the fire at the Ralston Afterbay reservoir. They will construct direct line in an easterly direction from the anchor point, supported by dozers, engines, and aviation resources. Additionally, resources will be preparing the Mosquito Ridge road from section 20/BM3356 to the point where it intersects Interbay road

for a burnout operation.
Projected MovementSignificant spread is expected to the south, east, and southeast.
Growth PotentialExtreme
Terrain DifficultyHigh: Steep, rocky, and hot canyon area
Containment TargetWith the current predicted weather and fire behavior forecast, containment objectives will be difficult to meet.
RemarksThree injuries reported last evening were minor injuries caused by falling debris and steep terrain. The patients were treated and released back to work.
Yesterday, ground and air resources supported the Tahoe NF with initial attack on a new fire outside of the incident's area of responsibility. The new fire was extinguished.

From: Steven Karoly
Topic: 11307 Message: 11327

I was up on Volcanoville Road in El Dorado County yesterday afternoon and early evening trying to get photos of the helicopters. Just after 1800 I drove up on a strike team as they were departing the Donaldson Staging Area.

The team was composed of: CDF engines 1454, 1455, 1459, 1470 and 1493 from the Sonoma-Lake-Napa Unit. I came up on the engines too fast to get an pictures (too busy writing down the engine numbers).

A captain in U4516 (from the Camino Fire Center) and U4552 (Garden Valley Station) were also at the equestrian staging area and picnic ground. The captain said the strike team was keeping a presence in the area for the night.

Since the past 20 years of my work life has been prison food service, I asked the captain who's feeding the firefighters. He said Growlersberg Conservation Camp was feeding those in the Volcanoville area and Mobile Kitchen Unit 45 out of the camp was feeding on the Foresthill side.

El Dorado Supper Services, Inc., tanker 45E was also staged there.

BTW, I never got any good helicopter photos. The trees were too thick to safely locate an observation point.

The last couple days of the Ralston have been unimpressive as the overnight humidity recovery has been high and the inversion settled in... AEU has no engines assigned to the incident and I know this being one of their firefighters and the American River Canyon being my primary response area i can clearly see the ralston from the back of our compound and the CANG airships fly overhead everyday at 9 am returning to mather airport at 6 pm, the fire did have some developement on friday but died down by 4 pm and nothing built significantly saturday or sunday.. Rumor had it incident ordered 20 handcrews to stage at Growlersburg camp in Georgetown unknown if this order was filled.The three injured firefighters were flown to the helibase at georgetown airport and ground transported to Auburn Faith hospital in Auburn.. Also Growlersburg is also being used for vehicle maintenance related to the Ralston inc.

Thank you guys for the last 2 posts on this fire, as I have not been able to monitor it since Saturday night.
Based purely on listening, I thought the air attack officer who was over the fire late Saturday afternoon did an extraordinary job of reacting to an unplanned situation, adjusting his priorities, and coordinating the extraction of the 3 injured.
On the subject of AEU engines, 4582 was doing property inspections in my neighborhood Saturday. One of the firefighters indicated he would be much happier out on the line.

If you get the chance to go back, go down Rubicon Rd (USFS road) about 1.5 miles. Excellent view across the canyon. I was there yesterday between 1500-1730; there is a MRN captain parked there as a loOkout for Branch 2. Division Z was directly across the canyon and I watched the fire roll down the steep slopes. I'll post the photos to the photo section tonight.

SOMEHOW, Fox 40 news found us and did a quick interview with the captain and incorporated a bit into her piece.

BTW Rubicon road is right off of Volcanoeville Rd about 2 miles from Wentworth Springs.

Thanks. I saw Rubicon Rd, but it was dusk before I realized the road might give me a better view. It shows as 11N66 on the ENF map.

Everytime I saw the bright orange tail of a helicopter, it was between the trees. That gave me a split second opportunity to snap a photo. The birds seemed to be flying low up the Middle Fork canyon once filled with water. I did see the command plane (is that what you call it) circling above most of the afternoon.

I'll head up there tonight or tomorrow if I have time. Any photos will be on my blog at http://roundthechuckbox.blogspot.com/.

The AEU captain was in T4516, not U4516. I'm not sure what his task was at Donaldson.

--- In norcalfire@yahoogroups.com, "sandrserve1" <sandrserve@...> wrote:
>
> If you get the chance to go back, go down Rubicon Rd (USFS road) about 1.5 miles. Excellent view across the canyon. I was there yesterday between 1500-1730; there is a MRN captain parked there as a lookout for Branch 2. Division Z was directly across the canyon and I watched the fire roll down the steep slopes. I'll post the photos to the photo section tonight.

20 acres, 0% contained; no threat to communities, no critical resource needs. The fire was started by an ultra light aircraft crash. The pilot was found deceased. The aircraft is located at the bottom of the drainage making the search and rescue extraction very difficult. The fire is located in a timber/hardwood model with a large amount of timber slash. If winds remain calm, the fire should hold at its current size. Significant events today: Begin to shuttle crews in to the fire and initiate line construction. Heavy use of the Type 1 helicopter will help with suppression efforts. Line construction is planned for next operational period. Expect the fire to maintain current size during next operational period. Growth Potential is Low. Difficulty of Terrain is Extreme, however it is very likely that containment/control targets will be met, given the current resources and suppression/control strategy. 157 personnel on the fire. Expected demobe today.

Is this the PNF incident/Woodleaf? Ultralight into the forest? Man...that is pretty ugly. I have flown a couple of those puppies. Must have been a medical as you can land them on a postage stamp with a decent approach. Is this the Woodleaf? I haven't had a chance to listen all day here...damn work anyway. ;-)

Nick,
I heard a couple of tankers in the pattern at Chico also but didn't see who it was. I think I heard C205 heading the PNF incident also.
Thanks,

Interesting design concept for the station building. I would hate to be the FF who has to clean all of that glass. They would have to call the cops to come over and shoot all the birds off of it.

Hey any one talking about us over here in forrest hill?????

We're trying to, but if you are up in the area, we could use your help. Monitoring ground communications is pretty close to impossible unless you are in close. I guess the Incident Management Team is even having a tough time with communications. Monday night, Night Ops radioed Grass Valley on 168.175, told them that Communications had set up a portable repeater for NIFC Command 3 at a location where Ops could neither hear it nor access it, and asked Grass Valley to send an HT out to Communications so Ops could talk to them on a forest frequency.
Then on the news last night, there was a piece about Verizon bringing out a portable cell tower and a cache of 25 phones for the IMT to use.

Keep us informed.

11349. SHF more fires around Pigeon?

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-14 01:26:14 UTC
From: Jake H
Topic: 11349 Message: 11349

On the way home from work I caught an aircraft talking with Redding on Shasta Forest Net about multiple heads around the Pigeon fire (Hwy 299, Big Bar-ish), started to describe it over the air but figured it was too complicated and said they will call Redding when on the ground. We have LOTS of smoke in Tehama/Shasta counties now but the wind has been from the south.

I've completely lost track of everything up there in Trinity/Six-Rivers.

P.S. I'm in North San Juan

John,
The Ralston Fire is Southeast of Grass Valley, and South of I-80.
According to the incident map that the incident team or the forest officials have been kind enough to post on the web, the lat/long for the point of origin is approx.:
39 01 00 N
120 42 20 W
The fire is in impossible terrain and is competing for resources with over 50 other major fires burning in the West.
Ch 3 just reported 62 percent containment. I would have to say that the hand crews and limited air resources are doing an incredible job so far.
Hope this helps.

Sorry I didn't realize that it was the Ralston incident, I thought
by the topic that the"Baker Ranch fire" was different.
Thanks for the clarification.
J.B.

Now that you mention it, I'm assuming that Baker = Ralston. Baker Ranch is
a subdivision that was threatened last week in the early stages of the
fire. Hope I've clarified and not muddled.

Jake and group,
Mandatory evacuation of all homes from North Fork to Rifle Range on North side of 299 this includes all of canyon creek and Junction City. 48 hour voluntary evac for everything south of 299 up to Dutch Creek Road.
Smoke was clearing a bit this morning so perhaps tankers will be able to fly.

I heard on Channel 3 tonight in Sacramento that Ralston is the #1 fire in the U.S. as of tonight. I'll try to post an update tonight. somewhere around 8K acres I think and 60% contained? I didn't hear how the wind event has affected it today. Smoke in the valley was certainly less!

Fix us up, Nitro!
I wonder how it got to #1. It's an order of magnitude smaller than the Montana and SoCal fires, the rate of spread hasn't been that bad, and this deep trough over the Great Basin ought to be pulling it away from Baker Ranch and Volcanoville. Must be those new, electronic voting machines.....

Boy, I dunno George. Caught my attention also. That is what the "media" said so I guess we gotta belive it eh? ;-(
Inci Web is not responding when trying to get an update here.
Maybe all of the complaints on smoky skies brought this up to #1? Sure was the topic of conversation in Sacramento the past couple of days.
Tis the season...

11360. Ralston update

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-15 03:59:06 UTC
From: nitrobear@comcast.net
Topic: 11310 Message: 11360

Inci web seems to be down or maybe being updated. Here is the "executive summary" on the Ralston. Sounds like they are getting a handle on it. I talked to a couple of fire fighters today in Marysville who had been on the fire and they said the terrain was "miserable". They were young, mighty strong looking guys so it must have been ugly up there!

Ralston (Tahoe National Forest): 7,650 acres at 62 percent contained. This fire is five miles east of Foresthill and is burning in brush and timber. Active surface fire was reported. Structures, fisheries and watershed are threatened. Structure protection is in place for a subdivision. Road closures are in effect.
Information: Call (530) 367-2224 or visit http://www.inciweb.org/incident/481/

Ah, you might have a point there about the smoke/air quality complaints.
But the current weather pattern is fixing that. Push all the smoke into
Nevada. Just like we do with all of our solid waste.

I dunno know about into Nevada George. I drove from Folsom to Chico this afternoon and it got worse on the way to Chico. Ugly, gray/brown sky but didn't smell smokey to me. Few rain drops by Oroville but basically clear and a lot cooler up in Chico tonight a SE breeze. I found an update on the Ralston which I'll post in a few.

11364. Ralston update

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-15 04:41:28 UTC
From: nitrobear@comcast.net
Topic: 11310 Message: 11364

Here is an update on the Ralston as of 12 Noon today it appears. Channel 3 in Sacramento claimed this incident was #1 in the country on their evening news. George and others think this report was wrong and it could well be. I also heard the Castaic fire was going to jump I-5 today which would probably close I-5. Wonder what happened down there? Here is the report from the CDF incident site.
Summary
The Ralston fire started in the bottom of the Middle Fork American River on Tuesday September 5, 2006. The fire reached the North Fork of the Middle Fork of the American River and is being held. The fire has crossed the Middle Fork of the American River onto the Eldorado NF and has burned south to the Rubicon River. Fire is established in three major drainages and has potential to grow significantly. A weather inversion caused heavy smoke to lay in the canyons and drainages limiting the use of air operation resources.
Activities planned for September 14, 2006 include work to hold lines created by previous burn out operations along Ralston Ridge road, Mosquito Ridge road, and in Brushy Canyon. Winds predicted for later today may challenge existing control lines.
Currently, there are approx 1,471 firefighters on scene.
Mosquito Ridge Road (Forest Road 96) is closed from the Foresthill Road to Robinson Flat Road (Forest Road 43). Blacksmith Flat Road (Forest Road 23) is closed from Mosquito Ridge Road to Ramsy Crossing. Ralston Ridge Road (Forest Road 25) is closed from Blacksmith Flat Road to French House. Road closures will continue until further notice.
China Wall OHV Staging Area is closed to the public and is being used as a helispot.
Cost to date is $8,800,000.
Basic Information
Updated2006-09-14 12:03:06 ET
Incident TypeWildfire
CauseUnder Investigation
Date of Origin09/05/2006 at 1551 hrs.
Location10 miles east of Foresthill

Incident CommanderRocky Opliger

Current Situation
Size8,365 acres
Percent Contained67%
Estimated Containment Date09/17/2006 at hrs.
Total Personnel1,471
Fuels InvolvedType 10 Timber (litter and understory)
Brush and Timber
Fire BehaviorNight time fire behavior continued to consist of backing fire with isolated upslope runs due to hot roll out material
Today's Significant EventsBurn out operations have been very successful over the last several operational periods in divisions G, K, W due to hard work by assigned resources and favorable weather conditions. Last night's operational objetive was to hold this line created by the burn out operation along Ralston Ridge road and Mosquito Ridge road, and in Brushy Canyon

Outlook
Estimated Date of Control
Planned ActionsThe front predicted for today will preclude any burn out operation. Crews will continue to hold the line created by the burn out operations along Ralston Ridge road, Mosquito Ridge road, and through Brushy Canyon.
Projected MovementDue to increased winds, significant spread is expected to the East and Northeast.
Growth PotentialExtreme
Terrain DifficultyHigh
Containment TargetThe current predicted weather and fire behavior forecast will make containment objectives difficult to meet. The fireline oculd be challenged today with a predicted cold front moving into the area.
RemarksThe Placer County Water Agency and PG&E continue to assess and repair damage to equipment and infrastructure in the fire area. These efforts are being coordinated through the IMT

Weather
Current Wind Conditions2 mph N
Current Temperature63 degrees
Current Humidity47 %
Forecasted Wind Conditions9-14 G 25 mph W
Forecasted Temperature60-70 degrees
Forecasted Humidity35-45 %

I went back up to the Volcanoville area tonight. I saw very little activity. It looks like the threat to the area has diminished significantly. I didn't see any fire vehicles in the area.

I took several pictures at dusk of division z. They'll be posted to http://roundthechuckbox.blogspot.com/ by tomorrow.

11367. Regarding smoke: From Bar - Pigeon - Bake Fire

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-15 05:36:39 UTC
From: jodschamber
Topic: 11367 Message: 11367

This afternoon when the wind was blowing the smoke from the Pigeon Fire down into our valley, specifically Shasta Lake City, Redding area, the smoke looked like a very ugly dark brown fog bank rolling towards us and then settled in for the evening. I am hoping the winds stay calm up at the Pigeon Fire so the firefighters can maintain what fire line they have at this time. This afternoon until dark their were continuous Fire Bomber runs from the Redding Airport up towards Shasta Dam and then over the mountains to the west towards the Bar - Pigeon - Bake Fire. Apparently, the pilots must have been able to see their way towards the fire. I just read on the trinity county webcam site: Weaverville had heavy smoke in their town all day, today. I know that Highway 299 west has been very smoky for several days. I am just hoping that the smoke will not be as bad as the summer of 1999 when we all had smoke in our valleys from California up to Oregon and over to Idaho and Nevada.

Topic: 11349 Message: 11368

well the pigeon fire is 14,183 and 28% containment as of 22 hrs
yesterday.

news reports this morning states fire is on both side of 299W and that
manditory evacs are in place.

so far about a 1000+ homes evacuated.

evac center is in lewiston.

they are anticipating a road closure today of 299W due to fire vehicle
traffic and the expectation of about a 1000 fire fighters in the area
fighting this thing with more to come. Plus Cal Trans Rd work.

it has been very smokey here in north west redding.
looks like everyone in the city is having a BBQ.

anyways have a great day group.

-Ron

Here is an update on the Pigeon. Had a problem finding it for some reason. It was listed under the Bar Complex which I should have known. OK map on the incident at this link: http://inciweb.org/incident/357/

Hope they get some rain up that way.

Summary
6:15pm 9/15/06--
Forest Area Closure is now in effect for Canyon Creek, North Fork Trinity River and areas east and north of New River, south of the Trinity River to the Hayfork Divide.
Under the new closure order, hiking trails and roads within the fire area remain closed to provide for public safety. The closures will remain in effect through the foreseeable future. The Trinity River closure has been expanded, the river is closed from Junction City to Cedar Flat.
MANDATORY EVACUATIONS
STLL IN EFFECT: All residences north of Hwy 299 from North Fork to/and including Junction City: Powerhouse Road, Valdor Road, Upper Road, Canyon Creek Road,and Rifle Range Road.
48 HOUR ADVISORY IN EFFECT: All residences from Big Bar to/and including Junction City south of Highway 299 to Dutch Creek.
Basic Information
Updated2006-09-15 21:19:28 ET
Incident TypeWildland Fire
Benefits & Objectives
1. Protect the communities of Helena, Big Bar, Junction City, Canyon Creek, Denny, and Big Flat from the fires. All available air and ground assets will support this operation, when necessary. Hold the Pigeon Fire north of Highway 299 and west of Canyon Creek. For the Bake Oven Fire, hold the fire east of New River/Slide Creek and a line from Denny to French Bar. In addition, hold the Bake Oven Fire south of Slide Creek, Mary Blaine Meadows, and the Salmon Mountains.
2. Provide initial attack response of any new fire starts. Engagement principles of Mass and maneuver will be employed.
3. Third priority will be to continue direct and indirect fire suppression tactics, where practical, with the intent of containing the Bar Complex fires. The overall goal is to hold the fires north of Highway 299.
CauseLightning
Date of Origin07/24/2006 at 0001 hrs.
LocationN by NW of Weaverville, California

Incident CommanderDon Feser

Current Situation
Size55,690 acres
Percent Contained28%
Estimated Containment Date09/30/2006 at 1800 hrs.
Total Personnel1,308
Fuels Involved10 Timber (litter and understory) NFFL fuel models 6, 8 & 10. Heavy loading

of 1000 hour fuels from past fires and non-fire (bug kill) mortality in the areas surrounding the fires exists.
Fire BehaviorCooler temperatures with an increase R.H. for today. Winds will remain the same and could cause spotting. Rollout and snags continue along Division BB on Hobo Gulch Rd.
Today's Significant EventsStructure protection in the threatened areas will continue. Residences may be wrapped with protective material or applied with fire resistive-gel, where needed. Today the fire became well established on the Klammath National Forest. Road closures are still in effect.

Outlook
Estimated Date of Control
Planned ActionsStructure protection is the number one priority along with containing rolling brands. Crews wil continue structure protection, monitor fire activity and mop up.
Projected MovementCrews will continue working open lines on the northeast of the Oven Bake portion of the Complex. Aircraft will work the Baxter Gulch area and continue suppression efforts for today's operational period.
Growth PotentialEXTREME
Terrain DifficultyEXTREME
Containment Target
RemarksThe Pigeon and Bake Oven Fires have been administratively merged and will be managed as one unit, The Bar Complex. From this point on all costs, acreages and percent containment figures will be for both fires. The Pigeon Fire is currently at $10.8 million, 14,183 acres with 21% containment. The Bake Oven is currently at $23.1 million, 45,763 acres, 33% containment.
The Type 2 Team (Allen Johnson) for the Klamath NF fire portion of the Bar Complex North will be arriving tday at 1800 for briefing.
24 hour road guards will be posted on the North Fork Road to Hobo Gulch. Expect heavy traffic on Highway 299.
Cooperating and Assisting Agencies: California Department of Forestry,California Dept of Corrections, California Highway Patrol, Trinity County Sheriff's Office, Red Cross, Cal Trans, Junction City Fire Department, Denny Fire Department, PG&E, and, Weaverville Fire Department

Weather
Current Wind Conditions6 mph NW
Current Temperature39 degrees
Current Humidity65 %
Forecasted Wind Conditions6 mph NW
Forecasted Temperature68 degrees
Forecasted Humidity55% %

Forest Fires and Respiratory Health Fact Sheet
By American Lung Association
September 15, 2006

Wildfires are an ongoing concern, particularly in the Southwest and Midwestern U.S., where there is dry, hot weather. During a wildfire, people all over the area may be suffering the effects of forest fire smoke. The American Lung Association urges those with respiratory problems such as asthma, emphysema, and bronchitis and also those with chronic heart disease to monitor their breathing and exposure to airborne matter. If problems develop call your physician immediately.

General recommendations:
☐ People living in close proximity to the fire-stricken areas should remain indoors and avoid inhalation of smoke, ashes, and particulate matter in the area. Ordinary dust masks, designed to filter out large particles, will not help as they still allow the more dangerous smaller particles to pass through. Special, more expensive dust masks with true HEPA filters will filter out the damaging fine particles but are difficult for people with lung disease to use. Consult with your physician before using a mask, especially if you have a lung disease.

☐ If you live close to or in the surrounding area, it's recommended that you refrain from exercising outdoors, especially if you smell smoke or notice eye or throat irritation.

☐ Extra precaution should be taken for children, who are more susceptible to smoke because their respiratory systems are still developing and they breathe in more air (and consequently more pollution) per pound of body mass than adults.

☐ When driving your car in smoky areas, keep your windows and vents closed.

☐ Air conditioning should only be operated in the "recirculate" setting.

People with respiratory problems and chronic heart disease should:

☐ Stay inside as much as possible, with doors, windows and fireplace dampers shut and preferably with clean air circulating through air conditioners and/or air cleaners and purifiers. Use air conditioners on the recirculation setting so outside air will not be moved into the room.

☐ Due to the higher levels of pollutants in some areas, there is a possibility of experiencing increased symptoms. If you are experiencing symptoms, please try to contact your physician. If you cannot, asthma patients can follow the asthma action plan developed with their physician. Use your peak flow meter if prescribed. Do not hesitate to take your medication, and avail yourself of the full spectrum of medications your doctor has prescribed to you.

☐ If outdoor trips in smoky areas are necessary, breathe through a damp cloth to help filter out particles in the air.

☐ People with asthma should check with their physician regarding any changes in medication that may be needed to cope with the smoky conditions.

☐ People using oxygen should not adjust their levels of intake before consulting a physician. (Call your doctor BEFORE you take any action.) If pulmonary symptoms are not relieved by the usual medicines, seek medical attention. Symptoms to watch for: wheezing, shortness of breath, difficulty taking a full breath, chest heaviness, light headedness, and dizziness. If you have any concerns or questions please contact your physician.

☐ If you develop a persistent cough, or difficult or painful breathing, call your physician. The onset of symptoms can appear as late as 24 to 48 hours after exposure and that smoke can remain in areas for many days after the fires have ended.

In relation to clean up, residents and volunteers should use caution since the clean-up process involves ashes and other particulates:

☐ People with lung or heart problems should avoid clean-up activities and areas where dust or soot are present.

☐ Thoroughly wet dusty and soot area prior to clean-up.

☐ This will help to reduce the amount of particulates becoming air-borne.

☐ Wear an appropriate dust mask during clean-up.

☐ If exposure to asbestos or other hazardous materials are suspected, do not disturb the area. Dust masks do not protect against asbestos.

For more information on respiratory health please contact the American Lung Association by calling 1-800-LUNGUSA.

Smoke prompts air quality warning
By Record Searchlight
September 15, 2006

Smoke from wildfires burning in Trinity County prompted the Shasta County Air Quality Management District to issue this morning an advisory warning smoke-sensitive residents to limit their outdoor activities.

``It may be prudent for people with respiratory problems to restrict activities until the smoke dissipates,'' the district wrote today in its advisory.

The district said that an air quality monitor in Anderson is showing readings in the upper moderate range on the Air Quality Index.

``Residents in the western portion of the county may be experiencing higher concentrations of smoke,'' it said.

Those with respiratory problems wishing to minimize their exposure to the smoke should limit their exercise, remain indoors with the windows closed and turn on their air conditions, it said.

11388. Hwy 299 East of Redding, CA Report from Redding.com

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-17 13:01:25 UTC
From: jodschamber

Rural fire causes mandatory evacuations, brings air and land containment response

By Lauren Brooks, Record Searchlight
September 17, 2006

A 25-acre fire that sent up a plume of smoke northeast of Redding on Saturday forced mandatory evacuations of residents in the rural area.

People living along Holiday Way, Oak Way, Gordon Drive and the cross streets of Holiday Way experienced anxious moments as the flames spread and they were told to leave their homes. The blaze spread quickly in the area of Mystic Lane, and Oak and Holiday ways north of Highway 299, the Department of Forestry and Fire Protection said.

The 911 emergency system was used to send calls to homes in the area. The evacuation affected residents living on Dusty Oaks Trail and all the connecting roads, CDF said. The Shasta County Sheriff's Department swept the neighborhood and ordered immediate evacuations shortly after 4 p.m.

The order was still in effect as of 7 p.m. Saturday. An evacuation center for residents was set up at Bella Vista Elementary School.

The Sheriff's Department helped at least one person without transportation leave the area. Arisa Williams told officers that her 19-year-old son Ryan was at their home near Holiday Way with no way out. Sheriff's deputies escorted Ryan and the family's two dogs to safety.

Firefighters responded to the fire about 3:50 p.m., and CDF dispatched an air attack and several ground crews.

Three strike teams were sent to the end of Holiday Way where the fire burned into the brush and oak woodland. A bulldozer line was constructed at the head of the fire, and a fire-retardant line had circled it by about 5:45 p.m., said Kelly Dreesman, division chief for the Shasta-Trinity unit of CDF.

Dreesman said 215 personnel fought the blaze, which by 6:30 p.m. had reached 75 percent containment. In addition to 33 engines, four bulldozers and four crews, there were 15 overhead personnel in one air attack plane, two air tankers and four helicopters.

The cause of the fire remains under investigation.

Reporter Lauren Brooks can be reached at 225-8215 or at lbrooks@redding.com.

11389. Day Fire - SoCal Update

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-17 14:52:02 UTC
From: Keith
Topic: 11389 Message: 11389

Yesterday, the Day fire made a major run. At 1730 hours a strong Santa Ana condition aligned with topography causing the fire to make a major run on the west perimeter. A major 8 mile wide fire front pushed to the west, exhibiting extreme fire behavior with spotting up to 1 mile ahead of the front. The fire moved 11 miles as of 4 AM, burning over 50,000 acres.

Due to high winds and safety concerns, all resources were removed from direct attack on the fire. Structure protection plans were implemented in the areas affected by the fire front that developed at 1730 hours. Potential closure notifications continued in the communities of Ojai and Fillmore. Equipment and personnel were positioned in the communities of Ojai and Fillmore for structure protection, if needed.

With Santa Ana winds and topography in alignment, coupled with low humidity and poor humidity recovery overnight, the fire will continue to have potential for prolonged runs towards the west southwest. Fire is projected to move through Rose Valley by late morning and across Hwy 33 in the afternoon. The fire is expected to progress steadily southerly and northerly by backing and flanking, reaching the town of Fillmore by late afternoon and continuing towards the communities of Santa Paula and Ojai.

The fire is currently 80,015 acres @ 15% contained.

Yeah, they've been mopping up all day it sounds like. This is the second day in a row where I drive through Red Bluff and do my customary horizon-smoke scan as I go over I5 overpass (highest point with clear 360 shot) and notice ugly brown plume to the north. Kicking myself for not listening to the radio (busy weekend though). Definitely solidified my directions from Red Bluff since the first smoke (Sat) I called as east of Bella Vista and today's smoke I called as Keswick-ish. ;) Sure enough I come back here to check the faithful posts of our Redding listeners and get the full scoop.

Did they activate any command repeaters for these two fires? I didn't hear any but I sometimes lock them out on the live scanner since distant fires get into my scanner and wreak havoc with static and sticking on those channels.

Not able to monitor much but did anybody catch the cause over the air of anything this weekend? Lots of publicity of high fire danger and then these fires pop up in some of the worst spots of the county...oh wait, breaking my own rule of no speculation on the list....

11394. OV 10 crash more info

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-18 15:51:20 UTC
From: John Beatty
Topic: 11394 Message: 11394

Taken from post to "bayscan"
Thought this would be of interest to the group:

NTSB Identification: LAX06GA287
14 CFR Part 91: General Aviation
Accident occurred Wednesday, September 06, 2006 in Porterville, CA
Aircraft: North American OV-10A, registration: N419DF
Injuries: 2 Fatal.

This is preliminary information, subject to change, and may contain errors. Any errors in this report will be corrected when the final report has been completed.
On September 6, 2006, about 1039 Pacific daylight time, a North American Aviation, Inc., OV-10A, N419DF, (call sign "Air Attack 410") impacted trees and rising mountainous terrain while maneuvering during an aerial observation flight about 22 statute miles northeast of Porterville, California. The accident occurred in the Mountain Home Demonstration State Forest (MHSF). The airplane was owned by the State of California Department of Forestry & Fire Protection (CDF), and the United States Forest Service. The airplane was destroyed during the impact sequence and post impact ground fire during the public-use flight. The airline transport certificated pilot and passenger were fatally injured. The pilot was an employee of DynCorp, McClellan, California, and was working under contract for CDF. The passenger (observer-crewmember) was a CDF Battalion Chief, and he was working as the air tactical group supervisor (ATGS). Visual meteorological conditions prevailed during the accident flight. The flight was conducted under the provisions of 14 CFR

Part 91. The airplane was dispatched using CDF's flight following procedure, and it departed from Porterville at 1025.

On the day of the accident, and during several preceding days, three fires existed near the MHSF. The CDF's airborne mission involved using air attack (reconnaissance) airplanes and airtankers (fire retardant droppers) to address the fires. The mission of the air attack airplane was to provide tactical coordination and communication with the incident commander (IC) on the ground.

CDF management reported to the National Transportation Safety Board investigator that during the accident flight, the only CDF airplane flying over the MHSF was the accident OV-10A. The accident airplane was operating pursuant to its prescribed mission in the air attack capacity. The crew's specific mission during the accident flight was to fly over the designated fire areas within the MHSF and adjacent areas. During the flight, the ATGS was responsible for communicating with the ground-based IC. The ATGS was tasked to identify and report the status of the previously observed fires, and identify the onset of any new fires.

After the pilot received his duty assignment and signed the CDF's flight release document, he proceeded to preflight the airplane. The ATGS similarly received his duty assignment, and thereafter both crewmembers boarded the airplane.

During the takeoff sequence, the Visalia Emergency Command Center (ECC) communications personnel received communications from the ATGS indicating he had just departed Porterville. At no time during the accident flight were communications received indicating that any mechanical difficulty or

unusual
situation had occurred.

Witnesses located in the MHSF near the Bear Creek Road reported observing and/or
hearing the accident airplane as it flew in a northeasterly direction
toward the
accident site. One witness observed the airplane flying between 400 and 600 feet
above the treetops, as it was proceeding in a northerly direction up the Bear Creek.
Another witness reported hearing the airplane's engines revving up, and
thereafter he
heard the sound of an impact.

WRECKAGE AND IMPACT INFORMATION

Based upon an examination of the accident site and airplane wreckage,
the initial
point of impact (IPI) occurred with estimated 125-foot-tall trees. The
trees were
based on 25- to 40-degree upsloping 6,240-foot mean sea level (msl) terrain in a
box-like canyon. The tops of several trees were found severed, trunks
were observed
gouged, and fragmented airframe components were found scattered in the
forest
surrounding the trees.

The magnetic bearing from the area of the impacted trees to the main wreckage was
estimated between 060 and 070 degrees. The main wreckage was found about 120
feet northeast of the IPI area. One tree, with an estimated 3-foot diameter, was
observed felled in this area, and airplane components were noted around
the tree.

The global positioning system (GPS) coordinates for the main wreckage
were 36
degrees 13.9 minutes north latitude by 118 degrees 41.1 minutes west longitude.

AIRPLANE INFORMATION

Certification.

In 1993, CDF acquired the OV-10A from the Department of Defense and converted it for use as an air attack airplane. The CDF is the Federal Aviation Administration (FAA) type data certificate holder for the OV-10A make and model of airplane. CDF has not received FAA type-certification for the accident airplane, nor was it required to have performed this action for the public-use airplane. The FAA had not issued an airworthiness certificate for the airplane, nor was it required to do so.

Participants to the Safety Board's investigation provided performance and structural information regarding the airplane, which had been modified from its original Department of Defense application.

Gross Weight Calculation.

According to CDF, the airplane's maximum gross weight is 10,500 pounds. Upon departure for the accident flight, the airplane's gross weight was estimated by the Safety Board investigation team to weigh 10,413 pounds. This information was not included on the CDF dispatch release documents. The airplane departed with all fuel tanks full of fuel. During the accident flight, the airplane is estimated to have burned off about 124 pounds of fuel.

ADDITIONAL INFORMATION

The CDF's "Aviation Management Procedures Handbook" indicates that, unless specifically authorized for low-level operations, pilots may not operate during missions below 500 feet above ground level. The accident pilot had not received authorization to perform low-level flight operations.

I see that the Governor has signed legislation that has changed the name of CDF:

It is now the California Department of Fire and Forestry.

And according to the legislation, it can also be called: CAL-FIRE.

This was CDF Firefighter's union sponsored bill.

I live at Lake Tahoe and they just put the word out on the scanner that
a striketeam with type 3 engines is requested for the fire near
Truckee. It is at Boca Dam. They have called out dozers and also hired
outside dozers and called for helicopters also. High winds are
spreading the fire rapidly.

Keith, can you be a bit more specific on the location of Boka? I've no idea where that is...

Thanks!

PA

The Lassen/Plumas dispatch is for a fire in the Tahoe Forest off of
Hiway 49 near Yuba Pass (between Sierraville & Sierra City). Heard
CHP closing Hiway 49 between Sattley & Bassets, but that is not
showing on the CHP site.
Fire is still in Tahoe now, but has potential of getting into Plumas,
but with the wind direction blowing mainly east it probably will not
make it there.
Hear fire depts doing structure protection & the lead overhead plane
directing bombers to stay east of a house.

From: Ric
Topic: 11406 Message: 11406

I just got home and would like to update. At 1740 Hrs., Fire was contained by hose lay only, and was held at 25 acre + . I had front row seats on this fire ,and monitored all activity untill 1800 hrs cut off time for the lookout. Aircraft was being released , and at my departure, there was a total of 6 overhead, 14 engines, 4 hand crews(1 still enroute), 1 copter on base in Truckee, 1 dozer on hold, and a cover crew - ST 9222 c enroute to NEU - E for coverage (2 engines went to the west side . Oh yes 3 water-tenders as well. The crews did an excellant job catching this 1 and holding it , As I watched and monitored the fire. I had gust's today in eccess of 35 + at my elevation (8656'). My initial report was flames and smoke visible, moderate to rapid build. 341 degrees /9.5 miles, and this had all the indications it was headed for Nevada. So All my Kudo's for the multi- agency responce and a job well done. Ric Baender - Martis Peak Lookout CDF NEU - E. / Tahoe N/F. P.S The Bassets Fire was really putting a good header up when I left.

It shouldn't involve any significant added expense at all, as more than half of the new law (Public Resources Code Section 701.6) specifies that

"(b) No existing supplies, forms, insignias, signs, or logos shall be destroyed or changed as a result of the authorization to use CAL-FIRE where appropriate to refer to the department, and they shall continue to be used until exhausted or unserviceable."

Per North Ops, the Bassett fire escaped initial attack. At 1930 hours, North Ops put the fire at 200+ acres. General location is Hwy 49, 5 to 8 miles NE of Sierra City (N39 37.17 x W120 35.24) Nevada Co has dumped a local Type III strike team around 1930 hours. At 2100 hrs., Placer County dumped XPL 4125C (Local Gov Type III) to the fire, Code 3. Units are to form up at the scene.

Additionally, NEU just announced that all personnel, both Schedule A and B personnel are being held onduty.

It sure sounded ugly on my scanner at about 17:20 with lots of resources heading that way in a big hurry. Great job they did in stopping it. Sounded like it was really driven by high winds from what I heard here. This time of year really gets scary with the low RH and potential for erratic winds almost every day.
KYFC!

Per the initial 209, fire is now 300 acres. Fast rapid rate of spread, independent crown fire with long range spotting (1/2 mile to a mile). Hwy 49 closed, evacuations of campgrounds. Immediate structure threat to community of Bassetts, numerous summer home tracts, and San Francisco State University Research Camp.

This mornings 209 shows the fire to be 1,500 acres @ 5% contained. Type 1 Team Oplinger CIMT 4 will take over at 1800 today. Alaska Team 1 ordered to replace CIMT. Yesterday, Nevada County sent a Local Gov. Type III strike team around 1930 hours. At 2100 hours, Placer County dispatched an inital attack Type III strike team with units to form at the scene.

My wife and I are planning a trip to the Bay area from So Cal. I would like to take some photos of San Francisco Fire's new American La France Eagle pumpers with the 1906 paint scheme. They bought 10 of them.

Anyone know what fire stations received them? I tried calling SFFD directly but the lady at the desk just puts me through to voice mail.

Thanks! Art

Art , although I hear on the news today they are having some problems
with them drafting ? here is the list of them and their stations

Engine 1 -- 3rd and Howard (near the Moscone Center)

Engine 3 - Polk and Post

Engine 5 Webster and Turk

Engine 6 - Sanchez and Henry

Engine 7 - 19th and Folsom

Engine 10 - Presidio and Pine (note - the SFFD Museum is here also)

Engine 11- 26th street and Church

Engine 36 Franklin and Oak

Engine 43 - Brazil and Moscow (I believe - across from Crocker
Amazon park)

OK, I am missing one ?

enjoy !!!

Ed

Note = if your in the downtown area .....I would check out

Station 1 as they also have a new Rescue from ALF and I believe

Truck 1 is fairly new (3rd and Howard)

> does anyone know?

Well, it's all in the legislative history... and it shows a typical example of how legislaors spend their time.

It's not really as big of a change as it looks. Looking at the law as finally passed and signed by the Governor, CDF's official name is NOT BEING CHANGED at all, although that was the original intent when AB1423 was first introduced in January of this year. It will remain the Department of Forestry and Fire Protection but "on and after January 1, 2007, the Department of Forestry and Fire Protection may be referred to, where appropriate and as determined by the director, as CAL-FIRE."

I'n not sure exactly what it means, but it could be that firefighting folks in the Department might begin abbreviating its name to "CAL-FIRE' instead of "CDF." It's not totally clear about that; I don't see any statutory authority for "CDF" being an
official way of referring to the department, but this law would make CAL-FIRE an authorized reference.

When first introduced by Assemblyman Bogh last January, AB1423 said "This bill would change the name of the department, on and after January 1, 2007, to the California Department of Fire and Forestry,
and permit reference to the department, where appropriate, as CAL-FIRE."

Comments from the Assembly Natural Resources committee analyst said, "CDF Firefighters, this bill's sponsor, emphasize CDF's role in fighting fires. This is the primary reason for the name change...." It passed the Assembly essentially unchanged.

When it got to the State Senate in June, however, it appears that some opposition had arisen from CDF itself, while the proponents still held that "According to the author and the sponsor, CDF Firefighters, 95% of the resources of the department are used for fire prevention or suppression. The remaining 5% includes the resource management and timber harvesting regulatory work of the department.

"The author states that CDF is the largest fire department in the state, and that "the name of the department should reflect their work." He further states that CDF "acts as the county fire department in 30 of California's 58 counties and that "in each of these counties CDF acts as a full service fire department by providing emergency EMS services in addition to fire suppression."

On the other hand, "Arguments in Opposition: The bill is opposed by the department.

"Its letter to the author raised three basic concerns:
"(1) The public and employees will be confused by ambiguity
in the department's name. Specifically, the department would have two names
until the current stock of logos and other materials are exhausted and
additional confusion could occur when the department is authorized to be called
both "CALFIRE" and its statutory name, whatever that name may be. The
department is concerned that its correct name be displayed on its equipment, at
workshops, and on educational materials distributed to the public. The
department points to unspecified costs that could be required should it need to
replace existing signage, materials, and logos."

They also talked about the logos, signs, etc would immediately become
"unserviceable" because they would no longer display the agency's correct name.
And thirs, they mentioned to that forestry and resource management continue to
be an important mission, though consuming a small portion of their budget.

That stuff is all at
http://www.leginfo.ca.gov/pub/bill/asm/ab_1401-1450/ab_1423_cfa_20060609_125842_sen_comm.html

On June 29, the State Senate amended the bill so it no longer changed the name
"Department of Forestry and Fire Protection," but merely authorize(d) it to be
referred to, where appropriate and authorized by the director, as CAL-FIRE.

On August 27 the Assembly voted to go along with the changes made by the Senate.
It was sent to the governor on Sept 5, and signed by him on September 14.

http://www.leginfo.ca.gov/pub/bill/asm/ab_1401-1450/ab_1423_bill_20060914_history.html

Much ado about what may be VERY significant to some, but not much at all to
others.

"Department of Forestry" never really gained wide popular usage in California, let alone when it later became Department of Forestry and Fire Protection. For years after becoming a Department everybody still just kept calling it "Division of Forestry". (Never "Forest Service" of course, but sometimes just "Forestry".) The last few years "CDF" was catching on pretty well, mostly because it was a three-letter name like CHP or FBI, it had been around a long time, and it's use was encouraged by management, foresters, and firefighters for agency recognition. CDF. Then the "multi-risk-trained" CDF firefighters (structural and urban fires, wildland, and medical/rescue) had wanted the new name California Department of Fire (which could still be CDF but would get rid of the Forestry part), same idea as changing the CDF uniform from khaki shirt, green pants to dark-blue work shirts and pants to look more like municipal "professional" firefighters and less like "park rangers". But they haven't been able to get that far yet so they've had to settle for CAL-FIRE for the moment.

Sort of goes to whether you think wildfire suppression and Fire Management should be part of broader overall Natural Resources management, or not. If you do, you're leaning toward the old Forestry, CDF <stewards and protectors of all the natural resources of the State for the taxpayers, as well as damn good firefighters even if underpaid>. If not, you bow more toward CAL-FIRE "professional hero firefighters", California's all-risk Fire Department.

Cap,
Thanks for explaining the back story.
I was unaware of all of that part of the story.
The men and women of the CDF aren't diminished in my eyes just because they wear green and due to tradition I'd like to see them keep it even if they have less forestry to do now and more firefighting and medical responding nowadays as compared to back in the day.

Too late for the khaki and green. They're all dressed in dark dark blue uniforms now. (The darker clothes are hotter in the sun too.)

I wore blue as a city firefighter for 20 years. I always liked the khaki and green. I went to work for CDF and in two years they switched to blue. Bummer!

11421. Butte - timber fire rapid rate - Powellton 22:35

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-09-22 05:46:34 UTC
From: Jake H
Topic: 9879 Message: 11421

Access at intersection of Lovelock Rd and Powellton Rd, right near the Skyway, halfway between Magalia and Stirling City. UGLY area

Sawmill Peak had first shot, Bald Mtn picked it up right afterwards and they both say it is very long flame length with at least 10-15mph NE winds on it in the timber. Bald Mtn has 40-45mph gusts at the tower.

10 additional type 3's from initial dispatch

151.400 BTU Local
151.445 Tact 11 Powellton IC

Possibly future freq
154.415 Butte Support for command frequency

These will be in priority on http://www.norcalscan.org live scanner. You'll also probably pick it up on Butte's live scanner http://www.thenet411.net/

From: Keith
Topic: 11424 Message: 11424

IC has upped the crew request to six crews. Fire is located in a logging operation area in heavy slash and timber. Remains of logging decks are contributing to spotting potential. IC advises they are getting wind gusts to 20 MPH.

about 3 acres, heavy fuel slash and down timber, flame lengths 50-100 feet.
Wants more water tenders (6) and six crews;

I can hear about the first ten seconds of the IC transmission but he gets
softer and mumbles as he goes--driving me NUTS!

I'm monitoring via this web site: http://www.thenet411.net/ It a live feed for Butte County. Powellton IC just advised of a spot fire, 1/2 mile down canyon from the main fire. Adivsed that if they can't pick it up, it's going to cause a lot of problems. Also just requested 1 staging area manager, 2 DIVS, and 4 additional dozers.

Wind Fuels Grassfires In Yolo County
Fire Officials Say Some Homes, Barns Burned

POSTED: 5:56 am PDT September 22, 2006
UPDATED: 5:23 pm PDT September 22, 2006
ZAMORA, Calif. -- Strong wind fueled several fast-moving grassfires in rural Yolo County that charred about 10,000 acres and burned at at least three homes and several barns before sunrise Friday, officials said.

Gusts topping 40 mph led fire officials to declare a red-flag warning, alerting the public to extreme fire danger as humidity remains low.

In addition to the three homes destroyed, at least three others were damaged. Seventeen barns, some livestock and six cars burned.

Officials said three fires near Zamora merged, leaving a 10-mile stretch of blackened earth.

Locals said they could not remember a bigger fire in the area.

"The worst one that we've ever had," long-time resident Gary Denny said.

He said he had little time to react.

"Around 4 a.m., the fire department came and honked the horn and got us up and we came out," Denny said. "It was just like an inferno all the way around."

The first grassfire started close to near the junction of Interstate 5 and Interstate 505 and quickly spread several miles south past County Road 14. Other fires broke out near County Road 16 and County Road 19.

Along County Road 20, a barn was still burning as of noon. Power lines were also down on some roads. Fire crews were cruising the area looking for hotspots in hope of preventing any more flareups.

The wind led fire to jump roads that would normally serve as firebreaks, with embers carried by the breeze.

Another grassfire also broke out in the Capay Valley along Highway 16. Flames were tearing through brush and as many as 40 homes were evacuated.

Predictive Services Discussion

Strong offshore winds will continue in California through Sunday. A high pressure ridge will build over the West through the weekend as showers depart to the east. Strong northeast winds will continue for northern California through Saturday, while strong offshore winds in southern California remain through Sunday with greatest impact over the coastal

mountains and inland valleys. The high pressure ridge will stay through

much of next week with warm, dry, and less windy conditions for the West.

==========
Updated: Wildfire closes Benton Drive

By Dylan Darling, Record Searchlight
September 23, 2006

A 4-acre wildfire that started in a Redding transient camp this morning closed Benton Drive and made for a nervous morning for people living close to the train trestle over the Sacramento River.

The fire was reported at 8:55 a.m. and 90 percent contained as of 10:30 a.m., said Ray Johnson, assistant fire marshal with the Redding Fire Department. It started about 150 yards north from where the trestle passes high over Benton Drive.

Because of a red flag warning for fire danger, brought by high winds and low humidity, the fire department had extra crews working today, Johnson said. About 50 firefighters were at the blaze.

"We went at it pretty quick with a lot of crews," he said.

Although no homes or other buildings were threatened, 20-foot-high flames were visible from nearby neighborhoods and smoke choked the air. The fire burned through a mixture of grass, brush, oak and poison oak.

Near where the fire started, fire investigators found signs of a transient camp, Johnson said, but they don't know who started the fire or why.

Some local traffic will be allowed on Benton Drive, but there will be no through traffic until 3:30 or 4:30 p.m., he said.

Reporter Dylan Darling can be reached at 225-8266 or at ddarling@....

Topic: 11463 Message: 11463

Requesting the TypeIII strike team from NEU (Nevada-Yuba) come to staging; second tac net (Tac 11) and command net (Butte Support) have been assigned.

Fire may be up to quarter mile long; hard to tell at night. They still haven't caught up to the head and access is limited/difficult.

For further info, these hills haven't burned in quite a while; the brush is tangled manzanita, oak, scrub and plenty of grass--and all of it very, very, VERY dry.

Small fire in canyon
By E-R Staff

PULGA -A small but ill-placed fire is being fought in the Feather River Canyon off Camp Creek Road.

The blaze, reported at about 6:15 a.m. today by the crew on a passing Union Pacific train, is burning on the southeast side of the canyon, opposite from Highway 70. As of 8:30 a.m. the brush fire had burned about two acres.

Besides being in what Butte County Fire/CDF information officer Janet Upton describes as "definitely mountain goat country," the only road access is to narrow to bring bulldozers or water tenders to the fire scene.

While the fire is small and slow moving, wind conditions in the canyon can become critical quickly, according to Upton.

She explained, that because of that the CDF is putting a lot of engines and personnel on this fire. Fire crews are staging both at Pulga and at the Jarbo Gap Fire Station.

More to come.

Not sure the details... They had a fire break out there early this morning and have been fighting it. They're using copters and ground personnel but have cancelled the fixed wing aircraft so it can't be that bad.

Mike

Copter 205 from CDF Vina was enroute at first daylight to Pulga this
morning. Todd, any idea? USFS and Inciweb sites seem to be down right now.

Jake,
Inciweb is down and has been for quite a while now.
It's kind of frustrating at such an active time as now.

Kim Noyes
Atascadero

P.S. The Day Fire is now up to 134,187 acres at 41% containment.
It is now the 8th largest fire in California state history behind the August of 1999 Big Bar Complex which burned 140,948 acres.

Pulga IC has been releasing resources, but it was about 2 acres in extremely steep rugged terrain and began about 7AM...I think (hey, I was still asleep!). The road at the top made a good firebreak, apparently, and control came with commendable speed, far as I could tell.

Thanks for the quick and informative replies. If anything big breaks out in that area they usually ask for OES communications support to wire up the ICP so I try to keep tabs on the area.

Probably worth monitoring the UPRR frequencies for the canyon since it seems to involve the tracks or getting equipment over the tracks.

Todd - hope you and your wife are enjoying Oroville.

Seems to be at the bottom of the previous fire; possible powerlines down; 4-5 acres, downcanyon wind, moderate spread, requesting 5 more type 3 engines and 4 more crews; 2 division group supervisors and a staging area manager.

Water is at a MAJOR premium; need to work out something or a portable tank as was used this morning. Might be at station 66.

Called the Noble Fire, this is in the Mendocino CDF unit. As of 6pm it's 440 acres at 10% contained in steep terrain. It due west of Corning (I5) 8 miles east of Hwy 101. My live scanner is picking up Noble Operations on CDF Command 1 151.355 (I think tone 5) which is on a repeater that I can't believe I'm hearing here in Red Bluff, but doing a path between me and it on Google Earth shows how it could be happening.

Just giving you all an update on our huge fire down south.
It's now the 5th largest fire in California state history and has been burning for 25 days.
It's significance to you is that it is sucking up a lot of resources although I have no idea if that has had any real effect up north.

Kim

Day Fire Fact Sheet Sept. 29

Released: 2006-09-29 9:51:00 PT

6:00 a.m

Fire Name: Day

Date and Time of Fire Start: September 4, 2006 at 1:55 p.m.
Location: Los Padres National Forest, Angeles National Forest, Sespe Wilderness

Kind of Fuels: Heavy mixed brush with scattered and heavy timber

Cause: Day Fire was human-caused, resulting from a member of the public burning a small amount of material within the Los Padres National Forest. The investigation is ongoing.

Size: 160,570 acres

Containment: 63% Est. Containment Date: 10/2/06-1800 Cost: $57,524,249

Line to Build: 19 miles

Weather Conditions: Sunny. Max Temps: Valleys-77 to 86/Ridgetops-66 to 75. Relative humidities: Valleys-12-22%/Ridgetops 8-15%. Winds: S to SE - Valleys-8-14 mph, gusts to 22 mph/Ridgetops-6-10 mph, gusts to 20 mph. Red Flag conditions continue through 2100 this evening.

Fire Behavior: Fire activity to be diminished compared to yesterday, due to suppressions activities. No new perimeter growth is anticipated north and east. All indices remain high to extreme, but expect moderate to high fire behavior along N & W perimeters.

Agency Jurisdiction: Los Padres National Forest/Ventura County Fire/Kern County Fire

Agencies Involved: U.S. Forest Service, Los Angeles County Fire, California Dept. of Forestry and Fire Protection, Bureau of Land

Management, California Highway Patrol, Ventura County Fire, National Weather Service, Santa Barbara County Fire, Cal-Trans, and many assisting agencies.

Incident Commanders: Mike Dietrich / George Custer

Equipment and Personnel:

118 Hand crews

28 Helicopters

39 Dozers

296 Engines

1022 Overhead

39 Water tenders

9 Airtankers

Total Number of Personnel: 4,852

Threatened: Residences and commercial buildings; recreational campsites; water quality due to post-fire debris flows; electric transmission lines and gas pipelines; cell phone and radio communications; Sespe Condor Sanctuary; arroyo toad, California red-legged frog, and Sespe River steelhead habitat.

Structures Destroyed: Damage Assessment Team is assigned. Completed assessments will be listed as completed in tomorrow's sheet.

Evacuations: Recommended evacuation remains in effect for Lockwood Valley. Precautionary evacuations in effect for Frazier Park, Pine Mountain Club, Pinon Pines, Lake of the Woods. Evacuation shelters available at Golden Valley High School - Bakersfield/West Ranch High School - Santa Clarita.

Special Information: Hwy. 33 northbound is closed to the general public from Wheeler Gorge after the tunnels to Lockwood Valley Rd., southbound from Lockwood Valley Rd at Ozena Fire Station. Lockwood Valley Road is open to residents.

Nitrobear,
I, too, have begun to notice the seasonal changes down here on the Central Coast.
Today it was gloomy and gray and drippy with a chance of an isolated electrical storm which did occur in the Channel Islands area this morning.
The leaves are subtly starting to change color and fall and the nights are now rather chilly and the days are getting noticeably shorter.
However, we are also entering the time of year with the greatest threat of death and destruction to wildland fire in both NorCal and SoCal with Diablo Winds up north and Santa Ana Winds down south and no month has historically been worse in both halves of the state than October.

Just to make sure none of you have fallen asleep on this world class list, I thought I would share a discovery with you.
I was on the freeway in Chico today beside a very dirty Suburban with a roof rack full of stuff. When he went by me, there was a logo on the side that said it belonged to "Firestorm Wildland". When I got back to my computer, I Googled it up and found their great web page with good info and images of recent activities on local fires.. point your browser to: http://www.firestormfire.com/index.html

I am probably the last one to be aware of them but I thought it was worth sharing with the list since it's so "quiet" right now.

Hey, they will even sharpen your chains! ;-)

Nice web page and good for them on the effort which I hope is successful!

From: Kim Noyes
Topic: 11505 Message: 11505

Day Wildland Fire

This incident is 100% contained.

Summary

The Day Fire was declared fully contained at 6:00 p.m. this evening, October 2, 2006. Firefighters completed construction and improvement of 163-miles of fireline to surround the 254-square-mile fire. Containment is a very important first step in eventual control of the fire and means that the fire has been surrounded. The objective is to establish a break in the vegetation that is wide enough to prevent fire from spreading outside of the lines.

In the days and weeks ahead, firefighters will "mop up" any remaining hot spots within the fire interior that could potentially cross the line. When all fire that could potentially jump containment lines is out the fire will be declared "controlled."

Emergency Fire Closure and Fire Restrictions

The Forest Service has closed a large area of Los Padres National Forest in Ventura, Kern and southern Santa Barbara counties. The closure prohibits all public entry to forest lands, trails, roads and recreation sites. A map and description of the closure is available from Forest Service offices, and on the Internet at: www.inciweb.org. Campfires and charcoal barbecue fires are now prohibited in all areas of Los Padres National Forest except within facilities managed by concessionaires.

Basic Information (Updated: 2006-10-02 22:39:27 ET)

Incident Type: Wildland Fire
Benefits & Objectives: Provide for firefighter and public safety.
Cause: Human
Date of Origin: 09/04/2006 at 1355 hrs.
Location: Southwest of Pyramid Lake and West of Interstate 5
10 miles northwest of Castaic, 12 miles south of Frazier Park, 8 miles south of Gorman
Incident Commander: Unified Command

Current Situation

Size: 162,702 acres
Percent Contained: 100%
Estimated Containment Date: 10/02/2006 at 1800 hrs.
Total Personnel: 2,177

Fuels Involved: Heavy mixed brush with scattered timber.
Fire Behavior: There will be minimum fire behavior due to increased moisture and suppression activity. Interior smoldering and occasional flare-ups where fuel persists will continue.

Today's Significant Events

Mop up continues in Lockwood Valley and Piru areas.
Significant demobilization is in process.
Continue rehabilitation of contingency line and lines within the burn.

Planned Actions

Continue determining rehab needs and continue implementing the rehab plan. Patrol and mop-up direct line from Lockwood flat east to Gold Hill and west to dozer line. Patrol and mop-up direct line east to west Piru Creek at Gold Hill Road. Pack-out equipment and supplies from the fire area.

Remarks

The Day Incident is under Area Command (Waterbury) with Type I Team (Custer) managing the East Zone and CIIMT-5 (Dietrich) managing the West Zone. A tentative transition with CIIMT-1 (Feser) to replace CIIMT-5 (Dietrich) on 10/03/2006 at 1800.

A helicopter event occured at the Rose Valley Retardant Helibase. Pilots sustained minor injuries and were transported to Ojai Valley Hospital for furthur observation.

11506. Re: Mount Vision Fire

All,
Eleven years ago today Northern California was in the midst of a Diablo Wind Event.
Three youths with a campfire outside of Inverness, CA, in Marin Co. started the Mount Vision Fire which went on to burn over the mountains there and onto and across a strip of Pt. Reyes National Seashore parkland and out to the Big Firebreak (Pacific Ocean).
The conflagration consumed 12,345 acres and 40 beautiful homes.
Another fire began along Hwy 20 in Mendocino County between US101 and the Clearlake area and burned over the mountains towards Talmage east of Ukiah. I have no idea how many acres it burned but I do remember seeing its scar on the mountains east of there afterwards and it seems to have burned a few to several thousand acres.

Kim,
I remember it well. It was my first shift as a newly promoted Captain at the Novato Fire District in Marin. In fact, it had been an extremely slow day. The Vision Fire was my FIRST call as a Captain. It was an amazing site to drop into the Pt. Reyes area and see the ridge line on fire as far North and South as you could see. The fire eventually chased us all the way down to the beach. In fact, it even glazed the first few feet of sand when it got there. Thought we might actually end up in the surf for protection at one point. Thank goodness for the great Pacific Ocean fire break!

Mark,
What an exciting start to your Captainhood.
Sand glazes at 2000 degrees F. ?
I never knew that.
I'll have to remember that so I can use it to win a bet. ;-p
Did you perchance take a camera with you and take some pics?
If so feel free to post them here as I'd be curious to see them.
I've gone hiking up in that area and absolutely love it and was
shocked it could burn that vigorously as it seems so lush, especially
on the leeside of the mountain range.
Inverness is very beautiful and there are not a few very beautiful and
funky homes there and it was tragic so many of them were lost.

11509. Re: Bar Complex

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-04 05:50:18 UTC
From: Kim Noyes
Topic: 11509 Message: 11509

*NOTE: THIS IS NOW THE 14TH LARGEST FIRE IN CALIFORNIA STATE HISTORY.

Bar Complex Wildland Fire

Summary

The Forest has issued a general closure order for the fire area and travel is restricted on Big French Creek, Canyon Creek and Hobo Gulch Roads. Trinity River is closed to public access from Junction City BLM Campground to French Bar due to fire activity. South of the River is open. Please see the Shasta Trinity website for additional information on the closure. The closures will remain in effect through the foreseeable future.

MANDATORY EVACUATION: The evacuation order remains in effect for all residents for Hobo Gulch Road south to Helena.

48 HOUR ADVISORY: has been lifted effective 09/30/06

EVACUATION CENTERS: Red Cross evacuation centers have closed until further needed.

The first priority is to continue efforts for structure protection and preparation for the communities of Big Bar, Big Flat, Power House, Canyon Creek up to Grasshopper Flat in the area of Junction City and along the 299 corridor.

Basic Information

Updated: 2006-10-03 13:33:22 ET
Incident Type: Wildland Fire
Benefits & Objectives:

1. Protect the communities of Helena, Big Bar, Junction City, Canyon Creek, Denny, Big Flat, Cecilville, Schoolhouse Flat, and Summerville from the fires. All available air and ground assets will support this operation, when necessary. Keep the Bar Complex Fires: (a) north of Highway 299; (b) east of a line from French Bar to Denny and the vicinity of New River/Slide Creek; (c) south of Slide Creek, Mary Blaine Meadow, Plummer Creek, and south and west of the south Fork of the Salmon River; and, (d) west of the Little South Fork, Caesar Peak, and Canyon Creek.

2. Provide initial attack response for any new fire starts. Resources are staged ready to deploy (to handle any trouble spots that may develop).

3. Third priority will be to continue direct and indirect fire suppression tactics, where practical, with the intent of containing

the Bar Complex fires.

Cause: Lightning
Date of Origin: 07/23/2006 at 0001 hrs.
Location: N by NW of Weaverville, California

Incident Commander: Bill Molumby

Current Situation

Size: 97,320 acres
Percent Contained: 43%
Estimated Containment Date: 10/15/2006 at 0000 hrs.
Total Personnel: 834
Fuels Involved: Medium to heavy timber with forest litter and understory. Bug kill trees are also in the area surrounding the fire.
Fire Behavior: With much higher humidities during the night the fire is creeping and smoldering in most areas.

Today's Significant Events

Area closed because of fire danger has been reduced. Please see news and announcements.

Evacuation Informaiton Update As of October 1, 2006:

Mandatory evacuation is still in effect for Hobo Gulch road north form Helena and Hwy 299.

Road closures remain in effect for designated areas along Hwy 299.

Evacuation centers have been closed.

Outlook

Estimated Date of Control: Not available
Planned Actions: Suppression efforts will focus on Hobo Gulch on the east side of the fire, and a spot fire area near Twin Sisters Mountain on the west side. Helicopters will actively support this effort. Fireline rehabilitation continues along Manzanita Ridge. Road blading and culvert cleaning is underway on French Creek Road. Structure protection resources are standing by if needed. Rain is expected today. For further information please see Daily Bar Complex Updates listed under News.
Projected Movement: Spread is anticipated to the west/northwest on the west side and notheast and east on the east side of the fire.
Growth Potential: High
Terrain Difficulty: EXTREME

Remarks

Pigeon Fire cost to date $28.6 million, 34,515 acres and 50% contained. Bake Oven cost to date $26.7 million, 62,805 acres and 39% contained. Molumby's Type 1 (CIIMT2) commands the Bar Complex with a

change in the Fire Complex Managemet planned for tomorrow.

Weather

Current Wind Conditions: 3 mph SE
Current Temperature: 42 degrees
Current Humidity: 75 %
Forecasted Wind Conditions: 6 - 10 mph S
Forecasted Temperature: 67 degrees
Forecasted Humidity: 60 %

11510. MNF drug ops on Forest Net?

Listening to what sounds like a stakeout on 169.175, Forest Net for the Mendocino. I've never heard this kind of traffic over the repeater before. Watching some people, some vehicles etc. One person is talking very quiet into his mic and between that and it being narrowband, I can barely understand what he's saying

Nice rain up in the north state last night. Chico got 1/4 " and I'v heard some of the foothill communities got over an inch! Ch3 had a story with video of snow up on Donner Summit, I think above 7K'.
Hope we get some more soon before the "Devil/Diablo" winds blow behind the dry fall fronts..
See Kim, I was paying attention! ;-)

I just spoke with my contact there and I found out that they have 3 or 4 crews up at the Bar Complex fire in Trinity County and have several other crews in New Mexico, Arizona, and back east.

They provide 20 man fire ground crews to assist the fire agencies with wildland fire containment and mop up.

They are doing very well and have crews out all over the country. Forgot to ask about the stock though. :) I think they are still privately held.

Their web site was done by a guy named Levi from Liquid Design in Redding (www.liquidredding.com). I think Levi has since left the company and now someone else runs it but if you would like to use his services, I may be able to track him down.

11516. Fire season

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-07 14:52:39 UTC
From: Steven Karoly
Topic: 3782 Message: 11516

I just checked the ENF website. It says the fire season is still in effect. Despite a 1/2-inch of rain this week, dry windy conditions are predicted for October. Here's the lead:

"Despite recent rain, fire restrictions are still in effect on the Forest. The recent storm dropped only 0.5 inch of rain and the preliminary forecast for the rest of the month is warm and dry. Campfires and charcoal barbeques are still restricted to designated developed campgrounds until the end of fire season. Propane or gas barbeques, lanterns, or stoves can still be used."

I was up at Lake Almanor Friday after the storm went through and expected to see some snow on Lassen Peak. Nothing up there but the glacial snow pack from last winter...no dusting visible at all.
On Saturday, we drove to Redding and Shasta was clearly visible but no dusting there either. Maybe those two old volcanos are still hot enough to melt any dusting? ;=)

Nice and cool at Almanor Friday and some instability showers on the way back to Chico. Fall is falling up there and the locals are laying in the firewood.

11520. RE: [NorCalFire] Fire season

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-10 05:16:42 UTC
From: Larish, Michael
Topic: 3782 Message: 11520

I wouldn't hold your breath yet. Came through the Mt. Rose pass (Hwy 431) in the Tahoe area. The pass is the highest year round pass at 8900 feet and at 8900 feet, they had roughly 1/10th of an inch of dusted snow. At 8700 feet, there was nothing. It'll be a few more weeks at least before we get actual accumulations, if not longer.

Mike

Subject: Re: [NorCalFire] Fire season

I was up at Lake Almanor Friday after the storm went through and expected to see some snow on Lassen Peak. Nothing up there but the glacial snow pack from last winter...no dusting visible at all.
On Saturday, we drove to Redding and Shasta was clearly visible but no dusting there either. Maybe those two old volcanos are still hot enough to melt any dusting? ;=)

Nice and cool at Almanor Friday and some instability showers on the way back to Chico. Fall is falling up there and the locals are laying in the firewood.

There *IS* a dusting of snow on the north face of Mt. Shasta from about the 10,000 ft level on up. Nothing to brag about, but nice to see the first signs of winter.

You may wish to download the "CDF Grp 3 2005.pdf" file in the FILES
section of the NorCalFire Group page at YahooGroups. The NIFC channels
are listed.

==========

Firefighting tanker won't see much air

Rules prohibit DC-10 from flight over federal land

By Jeremiah Marquez, Associated Press
October 13, 2006

LOS ANGELES ☐ Federal rules are preventing the takeoff of a major advance in firefighting ☐ a jetliner modified to unleash enough flame retardant to coat a three-quarter-mile-long stretch of ground in a single pass.

The DC-10 jumbo jet first flew this fire season. Streaking several hundred feet overhead, the jet's belly opens and a torrent of pink liquid cascades earthward, creating a 100-foot-wide fire line. Those spectacular drops helped halt fires threatening state land in California and Washington.

But its virtual prohibition from federal land, including the national forests, means it cannot be dispatched over vast swaths of the West ☐ 33 million acres in California alone, an area the size of Arkansas.

The reason for that no-fly zone: The plane hasn't passed a U.S. Forest Service safety check. The plane was designed to fly 60,000 hours, and the DC-10 in question has 67,000 to 68,000 hours of flight time logged, said Dan Jiron, Forest Service spokesman in Washington, D.C.

"That's the fundamental problem with the '10,'" he said.

Mark Rey, undersecretary for Natural Resources and Environment at the U.S. Department of Agriculture, which oversees the Forest Service, is set to speak about the DC-10 today, Jiron said Thursday afternoon.

Meanwhile, politicians were sounding off about the monster air tanker.

"What a horror story to see fires burning out of control and knowing that the aircraft aren't available," said Rep. Dana Rohrabacher, R-Huntington Beach, who has criticized the Forest Service for not using larger air tankers.

The plane, which drops 10 times more retardant ☐ 12,000 gallons in three external tanks ☐ than the typical air tanker, is certainly

popular with people whose property has been threatened by wildfire.
Tankers usually seen in the skies over the north state include the S-2T,
which can hold 1,200 gallons of water or retardant, and the P-3, which
carries 2,500 gallons.

Although the DC-10 didn't drop on any north state fires, it did join the fight against the Day Fire in Southern California last month.

The Day Fire, the fifth largest in modern California history at 162,702 acres, was threatening the popular tourist town of Ojai. The California Department of Forestry and Fire Protection brought in the DC-10, and officials credited the huge plane with knocking back the edge of the fire creeping toward the artists' enclave.

Steven Scott Smalley worried flames would damage ancient Chumash Indian spiritual sites near his Pine Mountain Club home. So he traveled 100 miles to the DC-10's base of operations in the desert east of Los Angeles and offered the plane's owner $80,000 of his own money to get it airborne.

"These sites are priceless," Smalley said. "I would have paid $1 million to save those lands."

The company declined, citing protocols and noting that the fire at the time was on federally protected land. By contrast, the state forestry department has a "call-when-needed" agreement with the company at a rate of $26,500 an hour, said Mike Padilla, the agency's aviation chief.

The Forest Service would allow exceptions if there's a "very serious life and death situation," said Rose Davis, a forest agency spokeswoman.

According to Davis, the federal restrictions derive from a 2004 National Transportation Safety Board report issued two years after the wings snapped off a pair of air tankers under contract with the Forest Service, killing five people in California and Colorado. Poor maintenance on older planes was blamed in those crashes.

"We're financially responsible and clearly morally responsible," Davis said. "Those crashes in 2002 were devastating."

The safety board's key finding: The Forest Service must ensure a plane's airworthiness, not the contractor that owns the plane.

Since then, the Forest Service has developed guidelines to do just that. One of them is an engineering analysis that looks at how many hours any aircraft can be flown safely. But the Forest Service has yet to complete that "operational service life" study for the DC-10.

Davis said the company that owns and operates the DC-10 ☐ 10 Tanker
Air Carrier, based in Victorville ☐ has not provided all the necessary
data. The company responds that it's working hard to comply.
That's not easy because the study comes on top of Federal Aviation
Administration requirements, which the company has already met, said

general manager Brad Tuttle.

Unlike the Forest Service, the state forestry department relies on FAA and industry standards and does not require an operational service life study, according to company officials.

"It's not a small task," Tuttle said of the Forest Service requirements, which he said the company was in the early stages of meeting. "It's frustrating, but it's an item that they're requiring."

The Record Searchlight contributed to this report.

Kim,
You mean the Atascadero High School Reunion thingie? The DC10 debaucle didn't load for me. The DC10 won't fly over federal forest property from what I"ve read. Now, I gotta hear the explanation for that one beyond the design service life of the original air frame. First tanker that I ever worked with was a B17 from Aero Union here in Chico. Those bad boys flew in a WAR, dropped bombs on the Germans and other bad folks and, for some reason, still were servicable after some work, to save a bunch of firefighters butts and start a serious revolution in how we attack wildfires.. Why does it seem that everytime someone raises the bar on the airtanker equipment that a political solution takes it out of the equation? The "10" and the "74" could be a quantum leap in the suppression efforts on big and nasty fires probably an order of magnitude greater than the ones we have in the air today. Since we are in an election year, I wonder who is leading the decision to not let these birds work the western fires?
Ok kim, I'll start a "polite" thread. Banning those big birds just sucks until we have some data on their effectiveness me thinks.

11529. CDF-TCU Down Staffing

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-15 02:32:09 UTC
From: jerry.tannhauser@us.army.mil
Topic: 11529 Message: 11529

San Andreas, CA-- Beginning Monday October 16th, the California Department of Forestry and Fire Protection will begin transitional staffing in the Tuolumne- Calaveras Unit.

Areas affected are Calaveras, Tuolumne, and eastern portions of San Joaquin and Stanislaus that are within State Responsibility Area. Fire stations in those areas that have two engines staffed during fire season will be down-sized to one engine.

All one engine stations will remain open and the two bulldozers and Helicopter 404 will remain staffed as needed. Officials say the air attack plane and two air tankers at Columbia Air Attack Base will go off contract.

Lastly, Baseline and Vallecito Conservation Camps will have normal staffing Monday through Friday, with a minimum of one crew at each camp on the weekends.

Jerry Tannhauser,
WA6AVR
Columbia,Ca.

Nitrobear,
No, not the AHS Alumni group, but SoCalFire on Yahoogroups,.
There has been some debates there during the recent Day Fire about this "supertanker" usefulness issue...they're a tool in the toolbox....certainly useful in certain situations but not all situations.
Have you watched Tanker 910 (the DC-10) in action?
What did you think?
It's not what I expected.

Just a thought, while I agree that not using a resource like the DC10
is a grave error. I understand the higher level of regulation and testing
due to the increased strain inherently caused by airborne firefighting.
But to exclude use over a single area due to whom has control of that
area does not seem to make sense.

> Lastly, Baseline and Vallecito Conservation Camps will have normal staffing Monday through Friday, with a minimum of one crew at each camp on the weekends.

Of course, the inmates don't go home for the weekend in the conservation camps. All five crews remain in camp 24/7.

Correctional officers and fire captains do go home, however, with the exception of those who are on watch. I'm sure the news release means that one fire crew is ready to go, meaning its assigned captains are on duty, etc.

Agreed Kim..I got shots of it dropping on the Day Fire and wondered, "why". Why is this thing, at 26,000 grand an hour dropping in an inaccessable area. The purpose of retardant drops is to slow the fire so ground troops and dozars can reinforce the line. It was dropping where nothing could get in to reinforce the drop line.....As I said, it was a great photo op.....
It's my opinion "only" that this aircraft and the 747 (if it gets certified) should be used only when structures and, or lifes are in danger. That wasn't the case here.
OK, not going to address this anymore here......

There has been some debates there during the recent Day Fire about this "supertanker" usefulness issue...they're a tool in the toolbox....certainly useful in certain situations but not all situations.
Have you watched Tanker 910 (the DC-10) in action?
What did you think?
It's not what I expected.

> You mean the Atascadero High School Reunion thingie? The DC10 debaucle didn't load for me. The DC10 won't fly over federal forest property from what I"ve read. Now, I gotta hear the explanation for that one beyond the design service life of the original air frame. First tanker that I ever worked with was a B17 from Aero Union here in Chico. Those bad boys flew in a WAR, dropped bombs on the Germans and other bad folks and, for some reason, still were servicable after some work, to save a bunch of firefighters butts and start a serious revolution in how we attack wildfires.. Why does it seem that everytime someone raises the bar on the airtanker equipment that a political solution takes it out of the equation?

11534. DC10 discussion - please note

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-16 06:22:41 UTC
From: Jake H
Topic: 11526 Message: 11534

I'm stating this up front which is rare for this list. Since it is "quiet" right now continue with the DC10 discussion, but please keep replies, comments, suggestions, etc. to a mature, educated conversation. This is a very sensitive topic with some people. If it gets out of hand the moderators will kill it immediately. Zero tolerance for personal attacks etc.

Thanks!!
Jake

Interesting points Mike. I think your view of the application makes sense considering the price. I have no idea why they would showcase it in a "remote" area that could not be backed up with ground troops but I would like to know that I guess. Could the decision makers maybe been doing a little marketing to show the DC-10 capabilities?
The video I have seen was a little less than I expected to see. It looked like a very high elevation drop and you couldn't really see the fire activity below the DC-10 when it was dropping.
I'm sure we will hear some more from the experts on it.

Oh, absolutely it was a marketing thing Nitreo. That plane should not have been out there. You know though, it did paint a very respectable line along the ridge. I'd say the elevation was probably 200 feet over the ground but, again, why in hell was it out there.......All the news stations did show it dropping so I guess the marketing promo did pay off......usually the air tankers are not supposed to make direct suppression efforts unless the fire is on a structure.
Just lay a line down and back it up with dozers and ground troops of possible....Oh well, who am I to critisize, i got a shot of it also...lol

There has been some debates there during the recent Day Fire about this "supertanker" usefulness issue...they're a tool in the toolbox....certainly useful in certain situations but not all situations.
Have you watched Tanker 910 (the DC-10) in action?
What did you think?
It's not what I expected.

Something to consider...with the amount of solid line that the DC10 can paint, is it possible that the scope of retardant drops could be expanding to include direct suppression or redirection of the fire?

Mind you, I know NOTHING of firefighting beyond what I've learned here, but it seems that with the sheer amount of retardant available with the DC10, perhaps things may change?

Pam, it's been my experience that a smaller aircraft, like the P-3 or an S-2 can effect a more direct suppression attack then the DC-10 simply because they can get closer to the flames or a structure whereas the DC-10 has to drop from a higher altitude. I have seen an S-2 make a direct attack on flames impinging on a house. As for redirection of the fire, again, The DC-10 , because it has to drop from a higher altitude, would be ineffective in that because by the time it's drop reached the ground it would have thined out too much to actually redirect the flames. The S-2 and P-3 or any other smaller aircraft would have a better chance of redirecting the fire making a lower and more concentrated drop...Just my opinion. Mike

According to an article in this months Wildland Firefighter magazine. Air Tanker 910 was able to lay a line in 50 feet wide a mile long and was able to hold a flank on the Rico fire... That same thing would of used at least a dozen s2t's.. Sounds like a tool for the future and should be used where applicable. They only have one base for it certified to operate out of.. Trying to certify McClellan and Castle Airfields to continue using Air Tanker 910.. Rock on..

Good thoughts indeed Mike! I agree that these LARGE tools have a real place, especially in California. What other tool could paint a 50' wide, 5,280' long retardant line in one bloody pass?
Limited? Sure it is and it has to be carefully managed and applied and man, does it have to be flown right. Effective? Gezz oh dear man...nothing can compare to these gorilla tankers if they are applied, flown and managed properly.
"Rock on"! Learn how to use them I say!
Good thread and comments list members...

Hey Mike,
I guess the Marketing effort can be understood, depending on who was paying the bill to fly her. :-)
One of the problems with seeing revolutionary engineering or technical "stuff" via the media is that you can never be sure of the political orientation and how it's spun to we mortal viewers. It's an impressive machine that has to have some potential in the effort to stop devastating fires. I guess it really boils down to how it's used, paid for and managed at the end of the day.
I suspect it was "out there" to make some sort of a statement maybe? Wasn't it about a year ago that the 747 from Evergreen was doing the same sort of thing?

I have seen and heard of direct suppression efforts by air tankers in remote areas in the north state that really did make a difference on the impact the fire had. It has always been impossible to hit every start with effective ground resources and air tankers really make a huge difference when they are the only initial attack resource that can hit the fire early and cool it down until the troops can get on scene to back up the retardant lines. The single biggest difference I have seen in wildfire suppression in the 42 years I have been either directly involved or carefully monitoring wild land fires in the west, great people and training of human assets notwithstanding, is, clearly, the Air asset of all types! So far, "bigger has been better" for the most part. I don't see how we can loose by learning how to use these monster tankers.
In a bad year as we have had in the recent past, I can't help but wonder what a difference they might have made in the efforts?
I think the biggest challange is finding airports that can support them that are close enough to the incidents for the super tankers to be really effective. They are faster of course but there is a cost associated with that if they have a long hike to and from the fire.

From: Mike Meadows <fotoguy425@...>
Oh, absolutely it was a marketing thing Nitreo. That plane should not have been out there. You know though, it did paint a very respectable line along the ridge. I'd say the elevation was probably 200 feet over the ground but, again, why in hell was it out there.......All the news stations did show it dropping so I guess the marketing promo did pay off......usually the air tankers are not supposed to make direct suppression efforts unless the fire is on a structure.
Just lay a line down and back it up with dozers and ground troops of possible....Oh well, who am I to critisize, i got a shot of it also...lol

nitrobear@... wrote: Interesting points Mike. I think your view of the application makes sense considering the price. I have no idea why they would showcase it in a "remote" area that could not be backed up with ground troops but I would like to know that I guess. Could the decision makers maybe been doing a little marketing to show the DC-10 capabilities?

The video I have seen was a little less than I expected to see. It looked like a very high elevation drop and you couldn't really see the fire activity below the DC-10 when it was dropping.
I'm sure we will hear some more from the experts on it.

From: Mike Meadows
Agreed Kim..I got shots of it dropping on the Day Fire and wondered, "why". Why is this thing, at 26,000 grand an hour dropping in an inaccessable area. The purpose of retardant drops is to slow the fire so ground troops and dozars can reinforce the line. It was dropping where nothing could get in to reinforce the drop line.....As I said, it was a great photo op.....
It's my opinion "only" that this aircraft and the 747 (if it gets certified) should be used only when structures and, or lifes are in danger. That wasn't the case here.
OK, not going to address this anymore here......

11542. Re: [NorCalFire] DC 10 Air Tanker Grounded, News Story

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-18 05:22:54 UTC
From: kimnoyes@charter.net
Topic: 11526 Message: 11542

I was just up in Southern Monterey County a several hours ago checking out the burn area for the Rico Fire this afternoon for the first time since it happened and it was very interesting, much more than I anticipated.
The fire burned all around the old Slacks Canyon CDF station across Pancho Rico Creek from Peach Tree Valley Road.
I ended up the day at the Parkfield Cafe http://www.parkfield.com/cafe.htm and had the awesome grilled chicken sandwich with ortega chile and jack cheese with their killer fries and lemonade. If you've never been there you must make the Haj to the Parkfield Cafe. They have sign up inside the main dining hall that says, "If it begins to shake or quake, get under the table and eat your steak."
Anywho, I watched the approach and start of Tanker 910's first drop on that fire before it passed behind the smoke column as I stood on the shoulder of Indian Valley Road.
Didn't have an adequate opportunity for a good shot, unfortunately.

Ya Nitro, it's one thing to have an S-2 drop down into a canyon and quite another to manhandel a huge DC-10. The plane does have it's place out here but, as Kim says, who's gonna foot the bill. The Feds? And if it is going to be ordered on a fire, you better get the bang for your buck.
Again though, in a Santa Ana driven fire, no amount of air resorces in the world can't stop it. Not even the DC-10 or 5 DC-10 wouldn't be able to hold the head of a Santa Ana fire when it's spotting a mile in front of itself. One more note, if the winds are too strong, the plane won't fly....Mike

nitrobear@... wrote: Good thoughts indeed Mike! I agree that these LARGE tools have a real place, especially in California. What other tool could paint a 50' wide, 5,280' long retardant line in one bloody pass?
Limited? Sure it is and it has to be carefully managed and applied and man, does it have to be flown right. Effective? Gezz oh dear man...nothing can compare to these gorilla tankers if they are applied, flown and managed properly.
"Rock on"! Learn how to use them I say!

From: Kim Noyes
Topic: 11526 Message: 11544

Nitrobear, K Broadbent, et al,
Here's my non-firefighting view: the thing has four times the capacity of the older standard "heavies" like P-3 Orions and DC-3's, but, unfortunately, in my view anyway, it seems to provide the same basic coverage per unit area of ground covered as the older planes with simply more area covered per drop.
In other words, the one massive uber slug of retardant that could really knock out the head of a fire (or part of it anyway) that I had invisioned does not exist and from reading the literature for the converted Boeing 747 they will have twice the capacity as Tanker 910 meaning a line or retardant twice as long as long as Tanker 910's but no monster 24,000 gallon uber slug of retardant that could really knock a piece of fire out.
Having 12,000 gallons of retardant hit all at once obviously is a different kind of drop than strung out in a long line as happens to be the case with Tanker 910.
As it stands now Tanker 910 dropping is the equivalent of four standard "heavies" dropping in rapid succession extending the previous tanker's drop which is nice but it lacks the "knockdown" ability of a single slug or a couple of big ones at perhaps 6,000 gallons each.
Haven't we all seen a tanker knock out a part of a grassfire?
The Supertankers don't do that to brush and forest fires like I thought they would.
Now I realize there are structural issues that dropping that much retardant would create that perhaps such aircraft simply cannot endure without coming apart. I mean, for a DC-10 to suddenly lose the weight of 12,000 gallons of retardant might be too much for it to endure so perhaps what I had envisioned is not physically possible with the aircraft we now use. If I'm wrong then somebody please cordially straighten me out as one of the reasons I'm here is to learn.

Kim Noyes
Atascadero

P.S. Mike Meadows here has seen Tanker 910 in action in person far more than I have and from much better positions than I ever had so he would be more of an authority on this than I or most folks here.
I only partially saw it drop on the Rico Fire in Southern Monterey County last summer and then I've seen all the video and photographs out there by others.

11545. What's burning deep in Lassen USFS?

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-19 05:06:15 UTC
From: Jake H
Topic: 11526 Message: 11545

Good column of smoke going up and wind blowing it south. From Red Bluff, about 100 degrees on the horizon and nothing really for me to get a bearing on. Appears to be between Hwy 32 and Hwy 89 near Lake Almanor-ish.

Jake

Nothing on the 209 as of yet. Could be just a burn there doing?

Listened off and on most of the day and haven't
heard of anything going on.

Did hear Tuesday what I thought was reference to
lightening strikes on the PNF. I was coming back
from Pacificon, coming up over Donner I80 and
got into a freak storm up there. Snow and lightening.
Had a couple of cars up ahead of us spin out...
Got back down into Plumas county and was dry.

Really weird...

Later,
Todd...

It could be very northern Plumas Forest. I always forget how far north Plumas sneaks up in there. Still nothing on 209's so who knows. Awful hot fire it seemed for a controlled burn, but Shasta/Trinity is lifting their burn ban. There was a significant storm over the area Monday evening with heavy rain, unknown lightning.

Thanks guys!
Jake

There was lightning south and east of Chico Monday night. Last evening, when I left work, there was a nice, distinctive, long smoke trail coming into Butte County with the source looking like it was up towards Transfer Point or the Highway 32/36 T. Hard to tell from the valley but it was quite a ways up there.

Its a control burn. Reach 43 asked Red Bluff (CDF) about it and Red Bluff responded that it was a control burn on the Lassen.

I went through there on Monday and saw nothing except for the prescribed fire signs. Came back through there yesterday and saw the column but heard nothing on the radio. saw no station activity anywhere so I figured it was a control thing.

Hey Tuscan, long time no hear. How's it going?
Were the prescribed fire signs on the Ponderosa? I think they're having
a controlled burn on Upper Middle Ridge in Tehama County pretty soon.
That will definitely be something seen from Red Bluff.

Topic: 11554 Message: 11554

While i was at work yesterday i heard part of a tone out by Grass Valley ECC on NEU-E. The dispatcher was talking about Oscar-1, Oscar-2 and Oscar-3, no idea what that means. He was also saying one dozar to be manned 24-7,along with 3 crews to be oncall at the conservation camp. Are they re-staffing? Any help would be great.
Thanks
Scott Biddle

Request numbers for "Overhead" personnel (usually supervisors). Oscar is the letter "O" in the international (and ICS) phonetic alphabet. Requests O1, O2, & O3.
Requests for Engines would be E1, E2, E3 (Echo). For Crews would be C1, C2, C3 (Charlie). And so on.

The Request numbers are associated with a Incident number.
Called-up resources need the Incident number and their Request Number for their time reporting documents, among other accounting uses.
Hope this helps.

I believe the resource's Order number includes the (10 digit) Incident number plus their Request number.
Something like CACNR12345 Req.C5

Besides the standard resource orders that have previously been mentioned CDF uses "Special Staffing Patterns" that are "ordered" up by Sacramento Headquarters, Region Headquarters (CNR/CSR), or the local unit (ie: TGU, SHU, NEU, etc) and usually dictate when everyone's days off are frozen, reserve engines are staffed, overhead (BC's, DC's, etc) are frozen on, or other than normal staffing events are authorized or required.

These usually occur during periods of frequent fire activity or during red flag fire conditions and similar special events.

11562. CA-AEU-Skunk Incident

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-24 22:37:35 UTC
From: Keith
Topic: 11562 Message: 11562

Fire started around 1430 hours. Located on Salmon Falls rd, north of Salmon Falls Bridge, just east of Folsom Lake. Initial arrival was 6-8 acres of heavy brush with rapid ROS.

At 1515 hrs., fire is approximately 60+ acres on both sides of Salmon Falls Rd. Flying three heavy air tankers, and 3 Type II copters. Heavy ground response including structure protection strike teams.

Command is CDF Command 1, tone 5. Tacticals are CDF Tac 9 and Tac 2. Fire is streaming at: http://home.comcast.net/~rrvilla/

Currently the fire has a south wind on it, but we are waiting for a wind shift tonight after 9pm. Red Flag conditions starting tonight thru Weds afternoon. Highly visible from Placer Co side of Folsom lake.

Fire being held at around 80 acres. Working hard at securing the line before the wind event that is predicted to start after 9pm this evening. Tomorrow could be interesting for the north part of the state.

Description taken from the 209 form:

Date: 9/24/06
Time: 0600
Incident name: Bassetts
County: Sierra
Lat: 39 37' 1"
Long: 120 36' 6"
Short location description:
Hiway 49 & Gold Lake Hwy, 4 mi NE of Sierra City

I would assume that the lat/long will give you the town of Bassetts,
since the fire started just up Gold Lake Rd from Bassetts.

Hope this is what you want.

Brian

11572. New Fire AEU

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-25 19:55:08 UTC
From: Dave
Topic: 11572 Message: 11572

A new fire breaking out on the AEU north of Placerville.

The "Mosquito" fire is in the community of Mosquito on
the north side of the south fork of the American River
north of Placerville.

First-in reports 2 1/2 acres with rapid rate of spread.
Heavy north winds blowing the fire in a SE direction.

One structure with immediate threat with others also
threatened.

151.190 CDF AEU
151.280 Air Attack
151.370 Tac 8
154.430 El Dorado Command

No virus found in this outgoing message.

11573. Mosquito Incident

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-26 03:29:56 UTC
From: Dave
Topic: 11573 Message: 11573

They picked up the fire at about 10 acres. Had USFS
tankers 07 and 23, plus CDF helos 205 and 404.

Been very busy in AEU and NEU today, several starts with
potential, but all picked up.

Tonight AEU had three structures that were under construction
all fully envolved when first unit arrived. Has spread
to the wildland. This was in the El Dorado Hills area.

11576. El Dorado incident today?

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-26 03:48:39 UTC
From: nitrobear@comcast.net
Topic: 11576 Message: 11576

I'm in El Dorado Hills tonight and the north wind was HOWLING here when I left the job site at 18:00 or so. Sirens all over the place around here. Logged into the El Dorado scanner but the volume was so low I could hardly hear it. (I had the same problem with the Ridge scanner tonight) My Laptop volume is up full so not sure how to get it to a listening level.
Any idea what was going on in El Dorado? There was an incident at Salmon Falls last night that I think they picked up. The one tonight was south of Hwy 50 and was a pretty large response from what I could hear of the sirens. Just curious I guess...

Thanks

' Jerry , If you heard it on 151.37 , you are

hearing a fire in Santa Cruz county , not San Mateo. Its on Old

San Jose road in the Santa Cruz mountains . I have not heard an

acreage estimate yet , but they did have structures threatened for

a time , both Copters 106 and 406 working the incident.

Strike team out of Siskiyou county dispatched. Unit Identifier 9262 Charlie.

Does anyone have any info on destination? They left out of Mount Shasta CA around 19:00 hrs this evening 10/25/06. Any information would be greatly appreciated.

11581. USFS loses three, pulls out?

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-26 20:53:22 UTC
From: David Coursey
Topic: 11572 Message: 11581

ABC News reports (an AP story, I think) that after losing three of its firefighters that the USFS pulled all its crews off the Esperanza fire. The story is headlined that 400 people are trapped by fire in an RV park. That does not paint the Forest Service in a terribly positive light, does it?

I know all our thoughts and prayers are with the families of the fallen firefighters and especially with the two critically injured firefighters.

My guess is that CDF and the local departments knocked this one down quickly yesterday. Driving home up US 50 I didn't see any smoke from the Mosquito area above Placerville. The only remnant was a slight odor of smoke near my Diamond Springs home late last night.

The fire is not listed on the CDF fire information web page.

The incident was being run by CDF with a USFS assist as the fire was near the forest boundary.
Once the tragedy was known only the USFS personell were pulled off but everybody else stayed put.

NEW INFORMATION.

According to my source with Northern CA Service Center, a Strike Team
is being sent down along with a fire manager to assist with the
incident. Also new info from the AP says a 4th firefighter has died and
the fifth is in critical condition with burns over 95% of his body.
the fire was deliberately set and there is a $100K reward for the
arsonist, who I believe also would now face murder charges. Flags at
FS stations as well as other fire agencies are at half staff. A moment
of rememberance and prayer for those who face the beast on our behalf...

God bless them.
They were apparently set up to defend a home when the fire blew up and over their engine which they had taken cover in according to two reports I have heard.
Looking at the reports on the media tonight, the fire behavior looks like HELL! If the USFS pulled their troops off the line, I wouldn't blame them at all and probably would support them based on the behavior I've seen footage of so far. It's 15 miles long whipped by the SA winds. 23,000+ acres as of now on Fox news Channel. 45 to 50 miles of perimeter, 10 structures lost, 4 firefighters killed.
They report 1,000+ troops on the incident.
I was on the I-5 today and saw three crew vans headed south. I was looking into the sun, couldn't see who it was but was CDF. Any Stike teams headed down there?
Fox has good coverage along with other cable news I'm sure.

Chris,
The 5th firefighter's prognosis is not good at all according to his doctor ina press conference this morning.
90% burns and lungs have been seered.
He's under heavy sedation.
This amounts to a death vigil by his family I'm afraid.

11600. NorCal Staffing order

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-10-28 03:43:53 UTC
From: Steve Jackson
Topic: 11600 Message: 11600

Anyone know why a staffing order is going into effect
tomorrow morning at 6 a.m. I heard go out in TGU, SHU
and BTU. Is there a Red Flag warning starting tomorrow
or is this because they might be sending units south?
The order stated all Sched A & B from FF1 to assistant
Chief will remain on duty.

tks,

Steve

With the end of the traditional fire season in most of CA, many CDF units have shifted to winter staffing, making it difficult to scramble resources for the fires in Southern California. A similar staffing order went into effect today in South Region (through Sunday unless extended), and I suspect that the North Region is following along.

I've heard a few xmissions on the travel net but it's simplex so depends on where you are. I did see a quick report on Fox News, can 't remember if it was Thursday or yesterday with the reporter on the scene talkiing about all the troops converging to get after the Espinoza. What caught my ear, was that he said "there were crews arriveing from far away California counties like Butte and they were coming to help fight the beast that had killed four of their kind. I always shutter when the media types start talking about fires, the people that fight them and the motivastions, blaw, blaw blaw. It never seems to come close to the truth.
Let's hope they kill that beast tonight and find the sorry P#$%$K that murdered the USFS ttoope I was one of those.

Sorry, I'm hurting a lot for them..

.

I heard something today on KFBK, 1530 in Sacramento that he had surgery to remove the burned skin, I know, it sounds awful!!!
The report said he was still critical.
I thought the report sort of felt like the doctors were trying to save him and the report from 90% to 60% burns on his body gave us some hope.
Keep him in your prayers I guess...

God Bless you man, God Bless you

From what I know, it was USFS Eng 57 (SBF) from the Alandale Station
near Idyllwild.

If anyone is interested, I have the official FS press release with names and bios of the firefighters. Most people who are in the business already know the details, but if you would like the info let me know and I will convert it to text and post it.
ALSO, I have a 12 minute video showing the MAAFS plane and a lead aircraft in action on what I believe is the fire Modoc this past summer. I would have to convert it from DVD to MPG and it would be an enormous file so I don't want to do it unless there is sufficent interest. The video was produced using public funds and is therefore distributable without copyright. It show some GREAT footage of the planes in action. Let me know.

11610. 5th firefighter

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-11-01 04:24:50 UTC
From: nitrobear@comcast.net
Topic: 11610 Message: 11610

Fox News just reported that the 5th member of the tanker 57 crew who was critically injured in the incident that took four others on his crew, has died tonight.
News also tonight said that the investigators are hot on the trail of the arsonists in the area. Wish them God speed. These animals need to be brought to justice ASAP!
I missed the whole name but the 5th was Carlos.

11612. Fire fighters are hero's every day

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-11-01 09:09:06 UTC
From: jodschamber
Topic: 11612 Message: 11612

My heart goes out to the family and friends of the five fire fighters, who died trying to protect homes in an arson fire with Santa Anna winds. Every day a fire fighter gets up and jumps into his gear some where to try to help others in the community. Many times they go do their jobs and turn around and may end up going out again on a call. Especially, in small cities or towns with only one or two paid employee's and the rest may be volunteers.

Unfortunately, just as there are fire fighters, there are also arsonists that do not seem to care about the damage they do to the land or the people. Recently, they caught an alleged arsonist in our city with GPS tracking, I hope the fire investigators will be able to continue to track arsonists and bring them to justice.

I wish I could comfort the families or friends of the fire fighters that have lost their lives, so that they will know in their hearts that many people care about their loved ones and they truly wish they could take away their pain and suffering. To extinguish the grief they will be feeling for quite some time.

11615. Northstate fireseason over Monday

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-11-04 19:46:22 UTC
From: Jake H
Topic: 11610 Message: 11615

Most (if not all) of the northstate is closing fireseason 2006 this coming Monday.

Thanks for another great season on the list. Had some new names this season contribute a lot of great information. It's not everyday 534 people can all coexist peacefully. I've always been glad to have the title List Facilitator instead of List Crazy-Moderator that some other area lists usually have to resort to. :)

As always, this list doesn't go away over the winter. Any major fire news affecting firefighting in northern CA is welcome along with discussions on previous season, posts on major structure fires, or crazy runaway control burns in Mt. Shasta in the middle of snow season, etc.

Jake,
I suppose our listmembers over in Mendocino and Humboldt Counties can keep us apprised of any major pot farm crop burns conducted by the state and federal gumints. ;-p
I hear the counties aren't enforcing too much in that regard.

Hey Jake,
The thanks should to you man for putting this thing together and letting it run with no politics to screw it up!
I've had a little experience as a SYSOP for a ham radio packet network and keeping the politics out of the "soup" can be a real struggle. Most of the lists that I've subscribed to have self destructed due to either over managing by well meaning moderators or politics from not so well meaning members.
This is the best list I've ever been associated with and from my end of the block, I would just say THANKS, nice job and keep it up!
I'm sorry as hell that we had to end the season with five guys dying in an arson fire. I just hope they have the right guy.

Thanks again Jake, nice job!

Let me echo those thoughts. Thanks once again Jake. Great job by you and everyone who participated by posting or just reading/listening along.

And while things are definitely looking up here in the north state, bear in mind that Southern California isn't out of the woods just yet. Tomorrow, Nov 6, marks the anniversary of L.A.'s worst firestorm ever, the Bel Air fire - http://urlcutter.com/BelAirFire And they have Red Flag warnings out for tomorrow in Los Angeles and Ventura Counties, and a Fire Weather watch in other areas.

George,
KluBats aren't mentioned on Google so we're pretty much screwed unless Don stops leaving us twisting in the wind wondering what it is.

As far as I'm concerned you're welcome to toad poke, cow tip, dwarf toss, or anything else your heart desires as long as it doesn't hurt anybody or animal...well, accept for obnoxious little yip yip dogs.

Pam,
This isn't a reply to you, but is the only way I have to address yall.
I work in Northern California for CDF. This is the best way for me to gather info on what is happening not only in my unit, but in the state. Jake, if you are the main man I thank you. Thanks to all the rest for helping to keep us informed

You're seeing smoke? Even better, I'm seeing heavy flames all the way from Red Bluff. It seems to be on the ridge just around Bully Choop, southeast of Shasta Bally. It has a strong south wind on it. Didn't see this until getting off work tonight, and just now settling down at home to monitor USFS stuff. With fireseason closed, and lots of rain on the horizon they may be squeezing in some control burns.

Lots of smoke around north Mendocino Forest as well. Not sure what drift smoke/fire this is from.

Ron,
I second and third your remarks. ;-p
I'm sure you probably already know this but for the rest of you who might not have heard it Region 5 lost two more firefighters the other day.

San Diego, CA - November 6, 2006...It is with great sadness that we confirm the two names of the Forest Service firefighters, from the Cleveland National Forest, who tragically lost their lives in a car accident, while off duty, on Saturday, November 4, 2006. The deceased are Francesco D'Amico and Daniel Duran. Adrian Rios, a passenger in the vehicle, suffered minor injuries and will be released from the hospital this week.

"I am saddened to hear of the loss of two brave and young firefighters who loved fighting fire and serving the American public. The Forest's thoughts and prayers are with the families during this particularly hard time," said Tina Terrell, Forest Supervisor for the Cleveland National Forest.

Francesco D'Amico, a Forestry Aid was a new employee to the Cleveland National Forest that was assigned to the Pine Hills Fire Station Engine Crew 33.

Daniel Duran, an Assistant Fire Engine Operator (AFEO), worked out of the Pine Hills Fire Station, Engine 33, and had worked for the Forest Service for four years.

The Forest Service employees were from the Pine Hills Fire Station, Engine Crew 33, on the Palomar Ranger District, near the town of Julian. No information is available at this time with regard to services for the firefighters.

Wonder if anyone knows about the fire Jake and Ron talked about? Was it a control burn? Seems a bit risky with so little rain so far. Weather guessers are saying some more light rain possible tonight late.

Burning through money: Plan for firefighting goes $8.9 million above Shasta County's budget

By Ryan Sabalow, Record Searchlight
November 7, 2006

A wide-ranging budget proposal from state firefighters would cost Shasta County an estimated additional $8.9 million in the next five years for things as varied as new radios, dispatching equipment and new fire companies.

That money would be spent in addition to the county's annual fire budget, which was approximately $5.57 million in 2005 and 2006.

Those figures and the loss of local autonomy worry at least one fire volunteer, who plans to complain to the Board of Supervisors in a letter today.

Jan Lopez, 64, who does administrative work for Igo-Ono Fire Station 50 and whose husband is a volunteer firefighter, said she grew worried after reviewing a draft of a budget proposal submitted to Shasta County supervisors last week by administrators of the Shasta County Fire Department.

Using the submitted data, Lopez estimates $6.2 million of the estimated $8.9 million will go to bolster resources for the California Department of Forestry and Fire Protection, the state agency with which the county contracts to protect its outlying areas.

Rather than contract with the state, Lopez said, the county should be spending its money on supplementing its local volunteer firefighters or creating independent county fire districts.

"Many California counties have divested themselves of fire-service responsibility for very good reasons:
CDF contracts cost a lot more because CDF personnel must be paid at state wage levels, while local paid personnel are paid on a much different scale," she said in an e-mail.

Lopez says her experience as a government consultant who specializes in special service districts like county fire departments gives her arguments credibility.

Emphasizing that the draft of the proposal is still in the early stages, Scott McDonald, a CDF assistant fire chief who administers Shasta County's fire department, said Lopez's claims are off base.

He said that all of the money in the proposal will stay local, even if the funds go to hire new CDF firefighters and buy equipment state firefighters will use.

"It would make for a stronger, more-efficient fire department," McDonald said.

Citing a growing population and employees and volunteers already stretched too thin to handle a rising numbers of calls, the five-year proposal lists numerous needs.

Volunteer staffing levels are about half of what's needed, according to the report. The county needs around 385 volunteers in addition to CDF crews.
In September, 182 volunteers were on duty, with an additional 16 volunteers "on probation" and unable to respond to an emergency, the report says. To remedy this shortage, the plan says the fire department needs $1.19 million a year to staff new companies in Centerville and Palo Cedro. Each would include it's own captain, two engineers and two firefighters.

Each company would be "Schedule A," meaning the station would be state-owned and staffed by state employees, though the engine would be owned by the county.

The plan also requests building another "Schedule A," fire station at a yet-to-be-determined location.
Also requested under the plan is $46,500 for portable radios, radio pagers, mobile radios and infrastructure repair.

The proposal lists other needs, including $450,000 for a backup dispatch system, dispatch consoles, 100 global positioning system vehicle locators, 10 mobile computer terminals and two radio repeaters.

More than $250,000 is needed for a dispatch captain and two dispatch clerks, the report says.
To help pay for the improvements, the proposal suggests charging a $25 dispatch fee for each emergency call.

Nearly $4.9 million is also needed for infrastructure improvements at several fire stations or to relocate them.

Other requests on the Shasta County Fire
Department's nearly 20-page wish list include $260,000 per year for a captain to train volunteers and a captain devoted to fire prevention, $65,000 for a fire marshal for fire safety inspections, and $2.2 million for fire engines, water tenders and rescue vehicles.

Lopez said the state is coming to the county looking to make up for state budget cuts.

The proposal says that compared with other counties, Shasta spends a smaller percentage of its annual budget on its fire departments. Shasta County allocated 1.44 percent of its 2005-2006 budget to firefighting, according to the draft budget proposal.

This compares with 2.86 percent in Tehama County, 3.78 percent in Butte County and 4.05 percent in Napa County, according to the report.

McDonald said the draft will go to each of the volunteer fire captains at its 23 stations around the county and be discussed by the Shasta County Fire Department Taskforce committee, made up of fire personnel.

He said he hopes to have a final draft completed for supervisor consideration by Jan. 1.

I have heard a lot of USFS troops today reporting in on control burns on the Lassen and Shasta Trinity.
Sounds like they are getting the burns done with no issues and from what I've heard at least, 15-35 acres of "piles" which sound like brush maybe?
Temps falling like a rock in NW Chico tonight down to 49 now and low 40's tonight. Time to light the wood stove finally.
Heard Butte county on an incident up near Yankee Hill/Hwy 70 this afternoon. Apparently a big rig.tanker over the edge. Full hazmatt response. I wasn't able to follow the traffic but did hear one of the initial response units report "just diesel" smell and looks like that was it.
Later, like about 2 hours or more, I heard the IC reporting the Medi-vac had just taken off with the driver to Enloe in Chico.
The technical rescue must have been pretty ugly as that is very steep country. Any details?

Thanks!

I looked up in the area today and figured it was south of Bully Choop
along the ridge. It was twilight when I first spotted it and the Bully
Choop peak was hidden in the smoke so I couldn't get an exact location.
Today there was absolutely nothing and the air was crystal clear. In
fact we had some veggie calls in TGU today. So must have been a control
burn on that ridge. I know we don't get much "fall" up here so they like
to get these burns in as fast as possible while the vegetation is still
burnable. Otherwise they're pressed against fire season when the grasses
are still wet but fire season started and they can't burn.

Don't know about the Hwy70 call. That does sound ugly, and
multi-discipline with the hazmat, traffic, medical, and tech rescue all
involved probably.

11647. Hwy 70 incident.

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-11-09 18:03:06 UTC
From: nitrobear@comcast.net
Topic: 11647 Message: 11647

I found an article in the Chico Enterprise Record this morning that talked about the incident with a big rig over the side. No details on the driver injuries although as mentioned, they flew him to Chico after they got him to the Jarbo Gap Helipad. Guess he was driving a cement tanker truck and it was empty from what the article indicates. You know, cement, the dry stuff they make concrete out of. ;-)

A glance off the highway saves a life
By HEATHER HACKING - Staff Writer
Article Launched:11/09/2006 12:00:00 AM PST

JARBO GAP -- Sometimes it can be just a look to the left or a look to the right that can save someone's life.
Wednesday afternoon David Wallace of Oroville was driving to work on Highway 70 in the Feather River Canyon. Wallace said he was about a mile west of a bridge that crosses the river, when he happened to see something shiny. For some reason, this made him curious, Wallace said. He figured it was something that had gone over the edge at some point that no one had gotten around to hauling out.
When he stopped his car and walked over to the embankment, he saw tire tracks that appeared fresh, then he saw the big-rig truck crashed about 100 feet down the embankment.
"Sure enough, I heard him yelling for help," he said. Wallace flagged down a car and as luck would have it, the man in the car had a two-way radio and was able to radio for rescue crews.
"I crawled down the hill and got up on the truck to find out that he was OK," Wallace said. "He was down on the floorboard with his head over on the passenger side."
Wallace said the man pushed from the inside and he pulled from the outside to get the door of the cab open.
There was a 14-inch log right through the middle of the windshield and out the top of thecab, he recalled.
The tree likely stopped the struck from sliding farther down the embankment, but nearly decapitated the man in the process.
Wallace said the man appeared to be in shock and repeated himself saying things like "please don't leave me," and "thank you God, praise Jesus."
The truck was used to haul dry cement and Wallace noted if it had been full, the truck could have slid farther. With the aid of CDF and search and rescue crews, it took about 90 minutes to haul the injured man to the road.
"I'm very thankful I decided to stop," Wallace said. "The best you can do is be there for other people. When you're having a tough time, they're here for you, too.

Hello Folks,

A few Amateur Radio operators are trying to make a detailed list of Amateur radio repeaters and scanner frequencies in Northwestern California. We want exact locations, coverage, links, power output, backup power. All this info would help us in our goal to have a usable list. We will also compile this information into a Google Earth file for usable very detailed maps.

If you know any frequency or details about a system, then we need you to update the database. You can go to http://WWW.KF6AAQ.COM and click on the large Icon for "Northwestern California Repeater Directory"

or

http://www.getphpbb.com/phpbb/index.php?mforum=nwcrd

Thank you!

Yes shasta county uses 154.430 to activate pagers and
quick calls in county stations... I believe it depends
on what kind of incident they are responding to if
they will use local net or county net as their command
frequency.

Question About Shasta County FD

Does Shasta County FD use 154.43 to activate the pagers carried by their volunteer firefighters? Or is this done on the CDF channel? Do Shasta County FD units use 154.43 as their primary comms channel or do they use CDF channels at 151 Mhz? Peter S

Shasta county is simulcast on both frequencies and operates on cdf local 151.160 and county net (used mainly for Trinity county repeaters) at 154.430 with a 3rd on 453.000.

hope this helps.

11660. RE: [NorCalFire] Question About Shasta County FD

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-11-14 16:43:19 UTC
From: Andrew Witham
Topic: 11654 Message: 11660

Dispatch for County and State equipment is combined and seamless. SHU (CDF Redding / Shasta County) are disptached simultaneously and automatically by the new CAD system.

When a request for service comes in, the nature of the call and the location automatically 'suggest' the correct dispatch stations and equipment. The dispatcher can then supplement equipment - for instance adding a water tender or jaws from a nearby station.

You will hear a pre-alert - three beeps for a dispatch, and then the tone-out. Different stations tone out on different repeaters (Bunchgrass, Southfork, Hoadley, Latour Butte, Hayfork Bally and Bully Choop),on both frequencies, so depending on the equipment request tone-out may be on CDF Local (151.160) and / or County F1 (154.430). Most operational comms are now carried out on Local. Until a major change a couple of years ago, it used to be that state engines used CDF Local and County engines used County. While dispatch was simulcast, this meant that a county engine on county would not hear the initial size up report given if a state engine was first on scene - just the acknowlegdement by dispatch, who would then need to rebroadcast the report simultaneously. Now almost everything is done on Local, unless there is a problem, when units at scene may switch to County for better communications. (This happened at one of the season's first wildland fires this year off Big Bend Rd when we could not get out on Local, but could on County).

As an example - if I am at home (Montgomery Creek) and #71 is paged out (off South Fork), my pager will activate and I will hear the voice dispatch. If I am at work (Burney), my pager will activate, but I will be unable to hear the voice dispatch. This is because the pager tones penetrate the squeltch level to activate the pager, but the voice does not. If the call requires Burney Ambulance, then I will get two tone activations (because Bunchgrass is also used), and I will hear the voice dispatch in Burney, as the Burney Ambulance dispatch uses a repeater on 'my side' of Hatchet.

Hope this helps

Drew

Yes shasta county uses 154.430 to activate pagers and
quick calls in county stations... I believe it depends
on what kind of incident they are responding to if
they will use local net or county net as their command
frequency.

Have you looked here: http://www.narcc.org

I don't think it provides quite the detailed info you're looking for, but then again, I don't think most repeater owners want the general public knowing their exact location of their systems.

It appears that your link to your project is not working.

Achtung gruppe!
Today, the Central Coast of California where I live received a three foot tidal run-up and Crescent City, CA, received a six foot run-up today causing minor damage.
The scientific community is in a quandry as to why California received more energy in the form of tidal anomalies than did Japan of which the Kurile Islands (epicenter of the causitive quake) used to be a part until the end of World War Two.

Pamela,
The reason Crescent City gets slammed worse from tsunamis than anywhere else on our coast is due to the shape of the seabottom just offshore of Crescent City which tends to amplify any tsunami waves that pass over it.

Crescent City 'surprised' by tsunami
- Peter Fimrite, Glen Martin and Marisa Lagos, Chronicle Staff Writers
Thursday, November 16, 2006

(11-16) 11:21 PST CRESCENT CITY -- Government officials said today that the Pacific Coast tsunami warning system worked exactly as it should Wednesday, when strong surges hit this small Northern California port city.

But harbor officials in Crescent City said this morning that they were caught by surprise by Wednesday's tsunami, even though the National Weather Service had had notified them of the possibility about two hours earlier.

"We were surprised," said Richard Young, harbormaster of the small Northern California fishing port's harbor. "I don't know if it's our fault or their fault but we need to get tied into the warning system better, we had that one warning in the morning but we didn't know about the warnings in the afternoon."

Troy Nicolini, warning coordination meteorologist for the National Oceanic and Atmospheric Administration and National Weather Service, said the government has to balance the need to prepare people with the consideration that the public will ignore their warnings if they are sent out too often. In June, his agency notified the entire West Coast of the possibility of a tsunami, following a earthquake off the coast of Eureka; that was a mistake, he said.

Overall, Nicolini said, officials believe the system worked well on Wednesday.

"The one think I wish we did differently was really stress how long this could last, but overall I think the notification went well," he said. "It's the cry wolf system; it's something we wrestle with all the time."

Locals aren't convinced.

Young said he received a warning at about 11 a.m. of the possibility of a tsunami around 11:40 a.m., when the National Weather Service reported a possible 3- to 5-foot surge resulting from an 8.1 magnitude quake near Japan.

Young said harbor officials went down and told people to tie up their boats, but nothing happened so they assumed the danger was over. Harbor facilities manager Paul McAndrews said he and Young were finishing lunch in the harbor office around 1 p.m. when they looked

outside and saw a sudden surge.

"We ran out and started securing boats, but the waves got bigger and started coming over docks so we got worried," said Young, who said a dozen or more boats broke lose during the surges.

"We were looking over at the end of the jetty," McAndrews added. "I thought it was bad when I saw the seals try to swim out, then they gave up and came back into harbor. It just started getting bigger and bigger and stronger and stronger."

The surges, which were a little larger than three feet at their peak, continued until about 7 p.m., Young said.

Nicolini said initial reports put the surges at between five to six feet, but they actually were smaller. The surges look larger, he explained, because all of the water is sucked out between surges.

This morning, most of the boats were secure but the harbor was still in a state of disarray, with debris floating in the water and one sail boat still sitting on top of a pier, where it was knocked on Wednesday. Big chunks of concrete were broken off portions of the dock, and barnacles were visible on the bottoms of pieces of pier that had been tossed upside down by the surges.

Young estimated the damage to the docks and boats at around $700,000.

Crescent City residents are particularly sensitive to tsunami threats. The town was struck by a 21-foot-high tsunami in 1964 that killed 11 people and destroyed most of the town center.

Bill Steven, a commander with the Del Norte County Sheriff's Department, said the surges came at a particularly inopportune time for the close-knit, isolated fishing community.

"Everybody was just getting warmed up for the Dungeness crab season," he said. "Unfortunately, this could really slow things down."

Steven, who was born the year after the killer waves hit the town in 1964, said his father often reminisced about the event.

"He was especially amazed by the tremendous field of debris it left," he said. "It's still a major topic of conversation in this town."

Residents also said Wednesday that the tsunami warning system failed to alert them to Wednesday's surges.

"We hear sirens all the time, but we didn't hear anything for this thing," said Don Thomsen, the manager of the Curly Redwood Lodge. Thomsen said there are three stages to a tsunami alert.

"First you have a warning, then a watch, and then it's get the hell out of town," he said.

Thomsen said he was not aware of Wednesday's tsunami until he heard about it from other townspeople.

"We're only three blocks from the harbor," he said. "We didn't know it was coming."

Wednesday's quake struck an area claimed by both Russia and Japan, but the waves near Japan did not swell higher than 23 inches. There were no immediate reports of casualties or damage.

Six hours later, tsunami waves up to nearly 4 feet caused by the quake crashed into Hawaii's shores, civil defense officials said. There was no serious damage.

The Associated Press contributed to this report.

11667. The same message on multiple Yahoo! Groups.

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-11-17 18:21:56 UTC
From: Jim Acker
Topic: 11667 Message: 11667

First off, let me say that this is not directed at any one person. I've probably done it too.

I'm gonna go out on a limb here: Since about 90% of us are all on the same Yahoo! groups, is there any reason to post the same message on every group?

It drives me nuts to get the same email or digest from 4 or 5 groups (or more!) that have the exact same message cut and pasted. What really makes me scratch my head is that we have the same friggin' thread going on by the same people on multiple groups.

We all get spam - and I'm not comparing this to spam, but we all get too dang much e-mail as it is. Do we really need to sort through another half dozen mails every day just because they are duplicates on several groups?

A lot of the people that post messages on this group are great folks with valuable input. I've learned something from most of them. Would it be too much to ask if we could keep the message threads limited to one group? Post messages on all the groups you want, it's a free country - but perhaps not the same message on every group.

Am I all by myself on this, or are there others who feel the same way? Maybe I just had too much coffee this morning, but I finally snapped.

By the way, I'm just posting this on one group. :)

Good point. When I start getting too many duplicate messages I take a look at my subscriptions to see which ones I might want to cancel or set to digest or no-mail. Otherwise I rely on my delete key.

I've found that if a topic doesn't resonate with the members of a particular list it will quickly die on the vine. End of problem. If it does generate replies, then it's up to me to decide how I want to control my inbox.

What gets to me more than duplicate posts is when people replying to a message don't trim the original down to only the most relevant parts. A group from the bay area seems to be rife with that, just look at their archives.

The other Mark.

Cross-posting to multiple-but-similar groups is often considered poor practice. Better to just pick the best group for the subject matter, and post away.

The problem is that not only do many or most subscribers receive multiple posts, but it is also difficult to hold a thread; either responses are crossposted as well, or they become disembodied, spread out over multiple groups.

Crossposting has its place, but should be used with care.

There is a short article in Wikipedia about crossposting:
http://en.wikipedia.org/wiki/Crossposting

Since it's slow, I'm not going to gripe about relevance :)...but I will say this:

When we had similar problems on other lists, we set some rules up with the other owner/moderators of the affected lists.
1. Pick your spot. Post the full post there.
2. If you have a website, slap a page together with the post on it.
3. THEN send short emails with the link to that page to the other groups who might be interested, rather than dunking everyone with long repeats. Short repeats are easy to delete or ignore without blowing one's top.

Just some suggestions...

PA

Okay all,
I've never been one to have any difficulty falling on my own sword when it was warranted and I'm doing so now.
I apologize to all for crossposting the tsunami stuff.
I did so for multiple reasons:

1) I felt it was extremely significant as this has not happened in quite some time along our coastline.

2) Things have been very quiet on all the lists of late.

3) I was unaware that so many folks were on all the groups.

4) I was unaware that crossposting would be such a nuisance for so many of you as when I see that in my own inbox I just delete without reading all reduncies which takes me all of a few seconds of my time.

5) I was unaware that crossposting was an act of poor "netiquette".

Lesson learned on all counts.
I won't be doing that again I assure you all.
I'm sorry for the inconvenience I created.

From: Jake H
Topic: 11672 Message: 11676

What's all this ruckus? We're supposed to be hibernating until next season. Please end this thread ASAP.

Most of us know crossposting pokes the bear. Some of us may have just learned that. :) Lets also remember, NorCalFire is for fire-related traffic in Northern California, on and OFF season. Lets keep it on topic. The rule of the topic is the name of the group. Is it NorCal and is it Fire? Nothing else.

In defense of some, I believe we did an incredible season with very minimal cross-posting.
Thank you and good night.
Jake

11681. Re: Question About Shasta County FD

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-11-18 20:59:17 UTC
From: hithel
Topic: 11654 Message: 11681

Based on the info supplied by fellow list members, my guess is that :

A. County pagers are on 154.43, and CDF pagers are on the 151 Mhz channel. (Does CDF actually have any pocket pagers? Maybe for Chiefs and special units?)

B. 'Station alerters / klaxons / base station radios' are probably on 154.43 for County owned stations, and maybe on 151Mhz for State owned station.

C. Mobile radios and portable radios are usually tuned to the 151 Mhz channel. This would be the "home" channel (the channel to use when 'inservice' and available to respond to an incident).

Does this seem pretty much correct?

OK, Peter, I've just *got* to ask...

With all the info you've dug up via Scan-L, Fireradio, and the various California yahoogroups, when are you gonna just move out here from the frost belt and become a RESIDENT expert? The venerable California *statewide* scanning gurus like Gene Hughes and Bob Kelty either have or will soon be retiring, with few if any people on the horizon to take their place.

Even Jake has only so much time on his hands, and has to focus on a Massachusetts-sized hunk of the Golden State.

Peter, I would say it is more accurate to state that all pagers and station alerts are tuned to CDF Local 151.160. County Net used to have a large crowd on it but the goal a few years ago was to get everybody (state/county/vollies) off it onto Local net, and use County Net as a tactical or county command channel. There might be a few holes in places that Local net doesn't cover and then as others have reported, they switch to County. That is fast becoming less the norm and more the odd.

11684. RE: [NorCalFire] Re: Question About Shasta County FD

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-11-19 01:30:59 UTC
From: Andrew Witham
Topic: 11654 Message: 11684

No. Not correct. No need to guess!

Pagers (currently a program is underway to replace all pagers with Motorola Minitor V's) are usually on 151.160. Various programming options are being tried at present, with Option D being 151.160 as the primary channel and 154.43 as the scanned secondary channel. (Option A 151.160 + vibrate alert, Option B 151.160 + tone & vibrate alert, Option C 151.160 + scan district / Tac, Option D as above - these options being selectable by the individual pager user). Since SHU has a new Captain responsible for comms who has no comms engineering experience, much of this is subject to experimentation at present).

CDF personnel do have pagers - one per equipment, and one for almost everyone else. Some specialists may have two pagers and a cellphone.

As I previously reported here, the split between Local (151.160) = CDF and County (154.43) = County ceased two fire seasons ago and is history.

Consequently station alerters and base / mobile radios will all use 'Local' as their main channel. There are standard programming channel layouts for 16ch and 210ch BK HT's and for Kenwood mobile radios now standard in vehicles. With the advent on non-crystalled radios, most mobile sets are scanning a number of channels while operational, coming back to Local for most command activities (unless a specific command channel has been allocated to a specific incident). I don't think any station still has tone activated klaxons - although Stn 16 (MacArthur) klaxon still 'tests' at noon every day.

Every incident is now assigned a tac channel on dispatch and units are to switch to that assigned tac on incident arrival to minimize radio traffic on Local. Additionally, traditionally Fire Districts will use their assigned district channel for admin / tac, county stations east of Hatchet will use County F3 and stations west of Hatchet will use County F2 for admin / tac use, although since the adoption of the requirement that a tac is assigned on every incident F2 & F3 have been used for this in the valley in preference to tac 9, 11, & 12, and sometimes this causes problems.

Next will be a further reduction in voice dispatch with the installation and adoption of MDTs throughout the county in the future.

Thanks to everyone for the info. If anyone else can report on any other counties in Northern California - which freqs are the pagers on? - County fire freq or CDF freq? I am guessing that most pagers are on the CDF channels - except for Trinity County - maybe Lake County and Placer County also? (For the Susanville area - I have no idea what freqs they are using these days).

Harry M - if I moved to California, I would have to learn how to drive on the other side of the country. :-)

I show them on that freq.
That is also the carrier of a cable channel, we had LOTS of leakage
around here when our cable company was using it.
Try moving your antenna/radio to see if you can find a spot that does
not pick up the interferance.
Your (siskiyou) CDF would be on 151.325
Forest service on 164.175
Med nets 1,3,4,5,6,7,8 should be active in Siskiyou.
155.175 may be Med dispatch.
Not sure if 460.55 is still used for Med.

Your problem with 151.250 is probably an external signal getting
into your scanner.

151.250 is used by many cable tv systems as a subcarrier and
if there is any leakage in their system it will generate a signal on
that frequency.

You might try moving your scanner around and might find a spot
where the external signal won't get into it.

The (old) info I have shows no PL tone for Lassen/Modoc's 151.25, so that would eliminate *that* possible solution for you. If the RFI isn't too strong, you could try entering the freq a little lower or higher and see if it helps: 151.245 or 151.255. Most scanners are wide enough that they'll still pick up the freq you want, and possibly keep the interference at bay.

Thanks Keith,
That was the problem. I should have thought of that first. The
155.175 in siskiyou county is Mt. Shasta Ambulance dispatch and the
Hospital freq is 463.150 on med #7.
Again thanks.

Caught some news this AM and it looked like the SA winds were finally laying down some. Reporters were whining that they were having trouble walking. The winds did look pretty incredible!
Still very nice up here in the north. Mid 60's. Nice!

11703. New hires allow Arcata FPD station to reopen

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-12-07 10:29:00 UTC
From: Harry Marnell
Topic: 11703 Message: 11703

Excerpts from http://urlcutter.com?30490 or http://www.arcataeye.com/index.php?module=Pagesetter&tid=2&topic=3&func=viewpub&pid=397&format=full

New hires restore Fire Dept. staffing, services

ARCATA/McKINLEYVILLE - Christmas will come a day early for McKinleyville residents anxiously awaiting the reopening of the McKinleyville Fire Station, which has been unmanned since April. The Arcata Fire Protection District plans to reopen the McKinleyville Station at 8 a.m. on Sunday, December 24, and staff it with a minimum of two paid firefighters around the clock, according to Fire Chief John McFarland.

Prior to April, the Mad River and McKinleyville stations were staffed with one firefighter each, but safety and efficiency concerns led to the consolidation of personnel at Mad River last spring, with McKinleyville essentially closed and relying on volunteer response....

The restaffing is a direct result of the AFPD's successful benefit assessment drive in July... After Dec. 24, both stations will be fully staffed with two full-time firefighters each, according to the AFPD. The department also has 60 volunteer firefighters currently on the roster, with room for 15 more. Applications for volunteer firefighting positions are available at the Arcata Main Station and should be returned before January...

Other changes are taking place following the influx of cash from the assessment. In October, McFarland, Capt. Russ Locatelli and Engineer Jesse Cummings traveled to Holden, La., to take part in a pre-construction inspection of the AFPD's three new engines, which are scheduled to be built and delivered by July 2007. Following their delivery, Engines 6 and 1, with a combined 51 years of service between them, will be retired.

(The unincorporated town of Washington is off Highway 20 between Nevada City & I-80)

Excerpted from http://www.theunion.com/apps/pbcs.dll/article?AID=200661216007

Washington's Emergency Equipment Vandalized

"Vandals broke into a vault on a mountaintop near the Town of Washington and stole a radio repeater, severely diminishing emergency communications for the entire town, public safety officials said Friday. It will take at least two weeks and $4,000 to replace the equipment. Meanwhile, sick people in the area may not get the emergency care they need.

"The thieves broke into the small, locked building using a forked crowbar sometime before Wednesday, Washington Fire Chief Mike Stewart said. They took the repeater, then broke into an adjacent Pacific Gas and Electric Co. rescue shed and stole sleeping bags, propane and food, Stewart said. The radio equipment is an integral part of the town's radio repeater system, providing communication between the Grass Valley CDF Command Center and Washington-area firefighters and volunteers. Without it, Stewart said, emergency personnel may not be alerted when someone in the remote area has a medical or fire emergency. "(Wednesday) night, there was an ill female, but four out of five volunteers didn't hear about it," Stewart said.

"Another repeater, stationed on Banner Mountain farther away, supplies a less reliable signal. The stolen repeater provided the majority of emergency communications."

Not sure what "repeater" it is... they do have a base & mobiles on 154.13, WNWY660. Perhaps a 153.965 or 151.325 machine?

Harry,
I bet it was a tweaker or two who needed something they could trade for some more crank.
Caning should be a mandatory sentence for convicted tweakers.
You'll never see potheads go to the trouble of breaking into a communications vault and stealing that sort of stuff, well, unless there are snacks stored there. ;-p

11707. Help in Mentoring a High School Student

Yahoo group: norcalfire (2005 — 2016)
Date: 2006-12-17 02:45:24 UTC
From: supercub_2001
Topic: 11707 Message: 11707

Greetings,

I have the good fortune of mentoring a high school student in Sonora, CA. We will be building a short-wave radio but in the meantime, as part of his senior project he wants to write a thesis on the advancement of radio technology as it relates to fire fighting in California.

Would some of you learned members of this board please send suggestions and/or links so he can give a great presentation?

Thanks in advance as we try to get another young man interested in both radio and fire safety.

Rex

The one in Glenn County is staged at Willows Fire. Unless someone has an
Engine break down then it is used to back fill that spot.

Greetings all-

I am interested in find the scanner frequencies for the Mt. Shasta Ski Resort?

Also the frequencies for the ski patrol in the Mt. Shasta area?

If anyone could help, I would greatly appreciate it.

Thanks, and Merry Chrismas to all.

HI Patrick,
From an old list that I have I show:
461.5750 Mt Shasta Ski Park
461.4375 Mt Shasta Ski Park (Main)

154.04 Mt Shasta Fire

This same list also shows:
154.515 Ski School
but didn't say where!!!
Since it was a Siskiyou County list, I am assuming Mt Shasta.

Regards,
Minor

thanks minor,

these should help.

just a correction on the Mt. Shasta fire freq. , all of siskiyou county
is on CDF Local Net 151.325 and repeats on 172.925 just for info.

again thanks and happy holidays.

Stuck at work - can't get details. Large law enforcement response to what sounds like Ponderosa Way in eastern Tehama County. Butte/Chico units responding. CDF has multiple east county units and division chiefs reporting to a staging location.

Mention of "23 passengers"

bus crash, plane crash, drill? If it's a drill, it's pretty late in the day for one, and I usually have pre-knowledge of county disaster drills.

151.370 CDF Local
154.740 Sheriff
154.025 Sheriff Ch2

CHP H16 at scene, maintaining a wide orbit. Staging for CDF is Cessna at Explorer, which is an intersection in Ponderosa Sky Ranch. CHP H16 also heard mentioning the entrance to the sky ranch and directions to the airport (landing strip).

All this on norcalscan.org live scanner.
Off work in a few minutes and will be able to glean more info shortly.

Barricaded suicide subject. Situation over, subject found 11-44.
That explains large law response, no CHP CAD, and not a large medical response as would be for plane/bus crash. Not sure what the "23 passengers" was on. Local ambulances were still around in Red Bluff and Corning so that was confusing, with a large law response, moderate fire response and minimal medical response.

You can now return to your regular programming.

Mike,

As of Saturday morning the link does not appear to be up.

I am puzzled why you have Shasta SO and Redding Fire - it would seem more logical to have Shasta SO and SHU local OR RPD and Redding Fire so that one link will let a listener follow the fire/medical/LE of either the city or the county, but LE in the county and fire in the city on one link seems odd IMHO?

I've had the scanner on all night and day today. I did notice aout 3 people listing or attempting to listen to it. The freq that area in there are just ones that i thought of. Im just testing it right now. If it works then i will put a better scanner on it. But if u have something that u want to listen to give me a freq and i will put it in there. I can have two scanners on there one on left peaker and one on the right speaker.

Subject: [EDIS-RX] EDIS Down

You have probably noticed the lack of EDIS Bulletins particularly the weather. EDIS has been down since the 10th of Jan for unknown reasons. We are trying to get either the legacy EDIS working again or use this unexpected & unwelcomed opportunity to transition over to the new EDIS CAP server. We hope to have this vital service restored today. Will keep you posted on events.

11732. Re: [NorCalFire] San Luis Obispo fire

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-01-16 18:47:13 UTC
From: kimnoyes@charter.net
Topic: 11731 Message: 11732

*Kim's Notes: there was also a 40 acre near Creston, CA, yesterday afternoon that diverted aircraft off the Diablo Fire for a time.
There was also a 2 acres grass fire near the Apple Farm in SLO day before yesterday.
There's discussion around here of restarting fire season to some degree as we are bone dry down here and offshore wind events have been the norm all through the Fall/Winter thus far with no significant rainfall on the horizon.

FIRE NEAR DIABLO AT RARE PLACE, RARE TIME

By David Sneed
dsneed@thetribunenews.com

Firefighters hope to have a brush fire burning several hundred acres near the Diablo Canyon nuclear power plant contained by Wednesday, if the wind cooperates.

More than 200 firefighters spent Monday battling the fire — an unusually large one for this time of winter.

The fire began Sunday afternoon when a mobile home a mile and a half north of the plant and its transmission lines caught fire and the flames spread to the adjacent brush. Gusting winds pushed the blaze across hundreds of acres of chaparral and bishop pine forest Monday, said Laura Brown, spokeswoman for CDF/County Fire.

As of late Monday, the fire was reported to have burned 300 to 400 acres.

CDF officials said the Diablo Fire is one of the bigger ones in the county recently, bigger than most of the fires that took place during the normal fire season.

The mobile home where the fire started was used by caretakers when the property was a ranch, before it was purchased by Pacific Gas and Electric Co. to be used as a buffer zone around the plant. The cause of the trailer fire is still under investigation.

The fire was 50 percent contained as of Monday afternoon. Full containment is expected Wednesday.

The nuclear plant continued to operate at full power during Monday. However, operators were ready to begin shutting the plant down if the fire gets too close to the plant’s power transmission lines, plant spokesman Jeff Lewis said.

While the plant itself is not in any danger from the flames, smoke from the fire could cause the transmission lines to short-circuit. Heavy smoke can cause sparks to jump between the lines or from the power line to the ground, Lewis said.

The fire has burned almost entirely on PG&E land, but a small section in the southeast corner of Montaña de Oro State Park was also blackened. As a safety precaution, rangers closed hiking trails in the southern part of the park. The road to the southern part of the park was closed at the trailhead for the popular Bluff Trail, supervising Ranger Ray Smith said.

Firefighters have had to deal with steep terrain and shifting winds as they battle the blaze. They also have to worry about something local firefighters rarely have to think about — hypothermia. Temperatures around Diablo Canyon have gotten down into the low 40s during the night and about 50 degrees during the day.

"This is unusual but not unheard of," Brown said. "It makes for some unusual firefighting conditions."

The combination of very dry winter conditions, low humidity and plenty of fuel to burn allowed the fire to spread quickly in spite of the cold temperatures. Much of the area had not burned in 70 or 80 years, and many of the pine trees were dead.

"Any dead pine tree burns very hot and very fast," Brown said.

11733. New CDF Name

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-01-21 04:43:11 UTC
From: Dave
Topic: 11733 Message: 11733

CDF is implamenting its new "CAL FIRE" name effective 1-19-07:
...

1. All new Nomex will be silk screened with the CAL FIRE moniker developed by the committee.
2. All new mobile equipment (e.g. fire engines, bulldozers, emergency crew transports, aircraft, and other vehicles) typically used to meet our fire protection/emergency response and state fire marshal missions will have the CAL FIRE moniker and appropriate striping applied.

3. Use of the CAL FIRE name is appropriate for answering the phone and shall be started immediately - e.g. "CAL FIRE, Alder Point Station." Specific phone answering policies should be addressed by Unit Chiefs at the Unit level for Schedule A contracts to address the customer service needs.

4. CAL FIRE shall be used in the signature block of individual emails. The exact CAL FIRE moniker developed by the committee is available off the Intranet to be copied.

5. Use of the CAL FIRE moniker on new facilities (e.g. fire stations, conservation camps, air attack bases, helitack bases, operational unit headquarters) and/or new signs that are typically used to meet our fire protection/emergency response and state fire marshal missions will be used. Use of "California Department of Forestry and Fire Protection" is still appropriate for facilities such as state forests, nurseries, and others as approved by the director. The committee will be developing a statewide standard to be used for any signs being replaced or upgraded.

It is important to remember that specific designs and methods to implement the CAL FIRE moniker will be developed by the committee; and the units, regions and other functions within CDF are not to implement this moniker until the design and methods have been developed and released. It is also very important to honor the directive of AB1423 not to destroy or alter existing signs, logos, or patches.

Ruben Grijalva, Director

Department of Forestry and Fire Protection

Although I'm not nor ever have been an employee of the CDF, I have always liked "CDF". When I hear that name I think of the coolest state fire department in the entire nation or perhaps even the world.
Cal-Fire is perhaps an upgrade in name as the dumb old "California Division of Mines and Geology" was relatively recently changed to "California Geological Survey" which is much more apropos and cool-sounding.
However, something inside of me feels sad about this change at CDF and I'm not sure I'm nearly as keen on that as I am the DMG changing to CGS.

Hi Kim et Al,
Kim, you hit the nail on the head as usual. What in the heck was wrong with CDF and, just curious, what is this change costing the state? (not to become political mind you) I have to wonder how many fire fighters or new fire apparatus could have been put on the front line instead of handing this to all of the "silk screen" companies?
Nothing against silk screen companies mind you but this stuff drives me crazy sometimes!
Sorry, I'll go back into hibrenatian...bear out.

Although I'm not nor ever have been an employee of the CDF, I have always liked "CDF". When I hear that name I think of the coolest state fire department in the entire nation or perhaps even the world.
Cal-Fire is perhaps an upgrade in name as the dumb old "California Division of Mines and Geology" was relatively recently changed to "California Geological Survey" which is much more apropos and cool-sounding.
However, something inside of me feels sad about this change at CDF and I'm not sure I'm nearly as keen on that as I am the DMG changing to CGS.

No equipment or uniform or insignia will be changed as a DIRECT result of the name change. Anything that NEEDS to be changed will, ie If a uniform is unwearable, at that point it will have the new insignia. But it's not like all the staff now gets new uniforms, new badges, etc.

At 06:32 PM 1/30/2007, you wrote:

Relax, guys, it's not costing *anything.* As was discussed several months ago, and was again posted recently down south:

From: "Radio Lady" <RadioLady@...>
Sent: Monday, January 22, 2007 16:58
Subject: Re: [SoCalFire] Re: New CDF Name

> More than half of the text of the new law (Public Resources Code
> §701.6) is to ensure that they don't spend money on replacing
> things that don't need replacing. In its entirety,

"701.6. (a) Notwithstanding any other provision of law, on and after January 1, 2007, the Department of Forestry and Fire Protection may be referred to, where appropriate and as determined by the director, as CAL-FIRE.
" (b) No existing supplies, forms, insignias, signs, or logos shall be destroyed or changed as a result of the authorization to use CAL-FIRE where appropriate to refer to the department, and they shall continue to be used until exhausted or unserviceable."

And the agency's name is *not* being changed. Only its logo/moniker. It remains the Department of Forestry and Fire Protection.

Harry

>> Kim, you hit the nail on the head as usual. What in the heck was
>> wrong with CDF...

Apparently CDF Firefighters wanted it changed and spearheaded the measure. Looking at the legislative history of AB1423, it says:

"ARGUMENTS IN SUPPORT : According to the author's office and the sponsor, CDF Firefighters, 95 percent of the resources of CDF are used for fire prevention or suppression. The remaining five percent includes the resource management and timber harvesting regulatory work of CDF.

"The author states that CDF is the largest fire department in the state and that "the name of the department should reflect their work."
http://leginfo.public.ca.gov/pub/05-06/bill/asm/ab_1401-1450/ab_1423_cfa_20060803_115404_sen_floor.html

Initially CDF itself had problems with the original proposal to rename the agency "CAL-FIRE." - (1/9/2006, Assembly).

For a while the bill would have changed the name to "California Department of Fire and Forestry" and allowed it to be referred to as "CALFIRE" (no hyphen) - (5/2/2006, Senate).

The final version kept the existing name but permitted it to be referred to as "CAL-FIRE" on official signs, logos, etc.

Well a name change could mean alot like a change from
a resource agency budget that is gutted as needed for
anything the politicians can dream up without a second
look to that of a public safety budget that will
hardly get touched and i think it better describes an
all risk firefighting agency that does about as much
in the way of the fire service as the closest
department to its size the LA county fire department
which was also renamed from a forestry agency.

*...WET WEATHER TO RETURN TO NORTHERN CALIFORNIA LATER THIS WEEK..

THE PERSISTENT DRY WEATHER PATTERN OVER NORTHERN CALIFORNIA IS
EXPECTED TO END LATER THIS WEEK. A POWERFUL PACIFIC JET STREAM
WILL FINALLY PUNCH THROUGH THE UNUSUALLY STRONG HIGH PRESSURE
RIDGE THAT HAS KEPT THE AREA DRY FOR SO LONG. THE JET STREAM WILL
TAP INTO A DEEP SUBTROPICAL MOISTURE PLUME AND AIM IT RIGHT AT
CALIFORNIA...BEGINNING WEDNESDAY...AND PERSISTING INTO THE WEEKEND.

SEVERAL INCHES OF LIQUID PRECIPITATION AND SIGNIFICANT SNOWFALL
ARE EXPECTED...ESPECIALLY FROM THURSDAY INTO THE WEEKEND...OVER
NORTHERN CALIFORNIA. THE UPCOMING WET WEATHER COULD MAKE A
SIGNIFICANT RECOVERY IN THE PRECIPITATION DEFICIT OVER NORTHERN
CALIFORNIA...AND TURN THIS MONTH INTO A...FABULOUS FEBRUARY.*

Hey Kim,
I've lived here most of my life now and I don't remember a winter this dry. In California it "ain't over until it's over" of course and we have pulled out a pretty good year several times in March as I recall. (AKA the "March Miracle")
They are calling for some significant rain and snow this week and into the weekend which should help. The water experts, after the snow survey last week are saying we will be ok with a dry winter, no, they didn't qualify that much.
Last year about this time, the green grass was growing like crazy up in the Chico area. Right now it is barely green on them thar hills. Bring on the rain!

And now they're using CAL FIRE (without the hyphen).
"The name CAL FIRE is spelled out in two words with all capital letters. There is no hyphen or any other punctuation mark between the words."
http://tinyurl.com/37dkk9
http://www.fire.ca.gov/

Yes, the idea relates to hopefully improving public relations. That is, aiming to share the public prestige of "America's Heroes" the "Firemen", rather than being thought of as mere managers of the natural resources of California.

It started with changing the department name from the "Department of Forestry" to the "Department of Forestry and Fire Protection" (but then they determined to keep using "CDF" for name recognition, instead of a lesser known "CDFFP").

Same goes for the dark dark blue uniforms CAL FIRE now wears, a PR move so the employees will be viewed in the same glorious light in the public's eye as a city Fire Department. A few view it as a step _downward_ from State Resources Managers to City Firemen, from CDF to CAL FIRE, and are disappointed the dark blue uniforms increase heat stress on a hot day, but they were outvoted by those preferring to be considered heroes. There's more money in it!

The CAL FIRE Mission:
"CAL FIRE" protects the people of California from fires, responds to emergencies, and protects and enhances forest, range, and watershed values providing social, economic, and environmental benefits to rural and urban citizens.

*Cap, *
Thanks for the additional explanation.
I fully understand the reasons for the change, but I'm still not excited about them.
*With our society unhealthily hell-bent on changing things as often as possible, often just for the sake of change itself, I've become a curmudgeon (although still a young man) to unnecessary change. *
What's in a name?
To me the CDF is what it is regardless of what they call themselves and what color uniform they wear.
*Perhaps the old name and uniform gave the wrong impression to regular "sheeple" but I'm not a regular "sheeple" and I don't care how regular "sheeple" think, anyway. *
I don't think too many people think the USFS fire service is not a fire department or perhaps I'm wrong and they wear green.
*Also, being I'm a curmudgeon about change I also hold tradition in high esteem and to me the CDF is the CDF and you know what? I'm going to keep referring to it as such. *
I always felt "CDF Fire" was more than good enough to convey the "non-forestry" nature of the CDF.
*These are just my opinions of course and I'm not saying any other opinion is wrong but this is just how I feel it. *

Kim,
Excellent thoughts. I am in complete agreement...it will always be CDF to me too!
In every single other western state fire service, CDF is a legendary name, service and example of excellence pretty much known world wide!
Thanks Kim....

From: "Kim Noyes" <kimnoyes@...>
*Cap, *
Thanks for the additional explanation.
I fully understand the reasons for the change, but I'm still not excited about them.
*With our society unhealthily hell-bent on changing things as often as possible, often just for the sake of change itself, I've become a curmudgeon (although still a young man) to unnecessary change. *
What's in a name?
To me the CDF is what it is regardless of what they call themselves and what color uniform they wear.
*Perhaps the old name and uniform gave the wrong impression to regular "sheeple" but I'm not a regular "sheeple" and I don't care how regular "sheeple" think, anyway. *
I don't think too many people think the USFS fire service is not a fire department or perhaps I'm wrong and they wear green.
*Also, being I'm a curmudgeon about change I also hold tradition in high esteem and to me the CDF is the CDF and you know what? I'm going to keep referring to it as such. *
I always felt "CDF Fire" was more than good enough to convey the "non-forestry" nature of the CDF.
*These are just my opinions of course and I'm not saying any other opinion is wrong but this is just how I feel it. *

Actually Kim, they're "Forestry Technicians" unless you're a politician referring to them at a funeral, and then they're firefighters.

John,
You mean forest technicians with pulaskis, shovels, chainsaws, helmets, steel-tipped boots, goggles, gloves, baked potato bags and Nomex everything riding Type 3 engines equiped with small-bore hoses? ;-p
Forest "technicianing" sounds awful exciting to me! ;-)

Hi,

Unless you have worked in the field you wouldnt know
the stigmatism that goes along with having any part of
forestry in your name... Although it may seem to you
that follow the fire circuit, it is often a thankless
meaningless job rolling into medical aids and having
people ask why your their to count trees or if their
is an injured tree... being called parked rangers or
sheriffs, being treated as a second class citizen,
although their is no way for the Forest Service to
climb out of their hole which they are forestry
technicians which do thinning and trail cleaning
projects when not assigned to fires, CDF on the other
hand i dont know how many times i be out in the
wonderfully ignorant public and had to try to explain
i'm not part of the forest service and I'm a well
trained firefighter just as with any municipal
department, and not just some ditch digger or tree
counter..

I agree with Pamela. The name "CDF" has special meaning for me too. When my father joined CDF in 1987, he was very proud to have done so and he had a habit of pointing out CDF fire trucks to the whole family every time he saw one rolling down the street by saying "CDF!" It then became a family thing and every time one of us saw any CDF equipment, we would yell out "CDF!" Sad to see it go.

In CDF Fire, we used to explain the difference between CDF and USFS as,
"We're ForesTREE, they're Forest SERVICE."
And of course both agencies have had nicknames (we won't mention).

Fire suppression related activities (including medical aid and hazmat) are
one aspect of CAL FIRE's mission of protecting and enhancing forest,
range, and watershed values providing social, economic, and environmental
benefits to rural and urban citizens. Fire is a part of earth's natural
cycles we humans foolishly try so hard to combat or ignore.

There's more to "protecting and enhancing" than putting out fires.

Uh uh. Suffice it to say (for both agencies) they were usually derogatory, sometimes profane, and not at all conducive toward today's vital objective of interoperability (under ICS and NIMS), especially in our "post 9/11" world.

And this is a "family" forum! <grin>

11776. Fire-Dex to sponsor NASCAR #18

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-02-10 19:54:30 UTC
From: AA6DX - Mark
Topic: 11776 Message: 11776

MEDINA, Ohio -- Officials at Joe Gibbs Racing announced Saturday that Fire-Dex will be an associate sponsor on the No. 18 Chevrolet driven by J.J. Yeley for the entire 2007 Nextel Cup Series schedule.

Fire-Dex, a leading manufacturer of protective firefighting clothing and emergency response apparel, will be featured on the "B-post" of Yeley's car, which is the area between the side windows. The company is entering its second year of involvement with a Nextel Cup team.

"I've always had tremendous respect for firefighters, EMTs and everyone in the emergency response profession, so to bring a partner on board like Fire-Dex who works hard each and every day to protect those professionals is quite an honor," said Yeley. "There are so many firefighters and EMTs that are big NASCAR fans, and I'm hoping to have some new fans rooting for me this season."

In addition to the B-post decal, the Fire-Dex shield will appear on Yeley's driver uniform, the No. 18 team transporter and the No. 18 team pit box. Fire-Dex will also use Yeley's No. 18 Chevrolet at its booth during two major fire industry trade shows, including the FDIC (Fire Department Instructors Conference) in mid-April and the IAFC (International Association of Fire Chiefs) conference in late August.

"We couldn't be more excited to partner up with a premier racing organization like Joe Gibbs Racing and align ourselves with such a long-standing team as the No. 18," said Steve Bonamer, national sales and marketing manager for Fire-Dex. "Much of the same technology that goes into protecting firefighters and emergency response professionals goes into protecting NASCAR drivers, so to have Fire-Dex as an associate sponsor of the No. 18 car, you can bet that many in the industry will be pulling for J.J. this season."

Actually, I find it rather fascinating.
There are plenty of threads on here and on all Yahoogroups I'm on that I could give a rat's ass about but I simply ignore them.
Yahoogroups are like individual parties: some folks are the life of the party and some are party poopers and some conversations are of interest to oneself and some are not and one simply involves oneself in those convos that are of interest and ignores those that are not by taking Don's advice.

11780. Australian fires

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-02-11 20:00:56 UTC
From: Helitack
Topic: 11780 Message: 11780

not to change the subject but thought this to be of interest, since Australia's fire season is flipped from ours. Seems that they have had a rash of fires in South Wales and other parts.

here is a link in case your interested.

http://www.rfs.nsw.gov.au/dsp_content.cfm?CAT_ID=684

and if you want to convert Hectures to Acres, try this

http://www.easysurf.cc/cnver5.htm#acr12

and a map of all their fires

http://www.aus-emaps.com/hotspots.php

11781. Re: [NorCalFire] Australian fires

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-02-12 03:04:59 UTC
From: Brian Verhalen
Topic: 11780 Message: 11781

When I was touring the Bassetts fire last Sept with one of the safety personnel, we met up with a fire fighter (I believe he was an officer/organizer, don't remember) from Australia here on an exchange of info tour.
While talking to him, we asked if what he was seeing was anything like back home & he commented that they do not put anything like the amount of equipment/personnel on a fire like we do here. They do not even have that type of resources. At the time we were talking to him there were over 1000 personnel on scene at Bassetts.
But he also said that they do not have the same issues of people/density etc issues we have here. A lot of their fires are out in the outback where the fire can burn for some time & probably no one would even see it.
Having been to Aus & seen what he was talking about makes sense. The only fire on the list that probably would get some extra attention would be the one W of Sydney. You have to remember that the population of Aus (a country that is very close in size to the 48 states) has a population that just breaks 20 mil, not even what we have in Calif, & most of that (about 70%) lives on the E coast side of the country.

11782. Info for siskiyou co. california

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-02-19 04:21:21 UTC
From: Patrick
Topic: 11782 Message: 11782

I know this is not fire related but it is interesting if your in the siskiyou county area. 187 pc (Murder) in Yreka Ca just occurred about an hour ago. Suspect vehicle is currently under the easy st bridge and Sherrif SRT is deploying to see if the suspect is in the vehicle. Traffic along I-5 north and south bound at south yreka and north yreka are stopped of diverted while this is going on.

155.310 Siskiyou Co. Sherrif

42.400 Siskiyou CHP Base

42.160 Siskiyou CHP Mobile

156.415 Yreka Police Dept.

8:45 pm

Just an update on my earlier post. SRT is on scene. Still unsure
of the suspect being in the vehicle. Sherrif, CHP, and YPD all
requesting an air ship out of redding for lighting and survalance
purposes. They have supsect name and discription but are not
putting it out over the air.

9:05 PM

Further update:

CHP is reporting that the suspect in the van is 11-44 (deceased).
He had been sitting under the bridge for a while and most likely
shot himself.

this should be my final post on this subject.

Mr Young,

No PL tone is required to monitor Redding FD. The only reason you should need the PL tone is if you are authorized to transmit on their frequency, in which case you should obtain the necessary PL tone from your authorized source.

It is my recollection that this list has a policy of not distributing PL tones.

There may some occasions. E.g., I "need" to use the output tones to scan Eureka PD's freq 3 and one of the local fire freqs at home. I get RFI, possibly from my computer or one of its accessories, on both 156.03 and 154.07, and the only way I can keep them in my scanning sequence is by using the CTCSS. Otherwise my scanners and my 2m rig all lock up on them.

> It is my recollection that this list has a policy of not distributing
> PL tones.

You may be right, but I don't recall that on *this* list. I know that some lists specifically don't want *input* freqs and tones, for obvious reasons, and I don't include either on my freq pages any more.

From: Jake H
Topic: 9656 Message: 11799

Receive PL is still 91.5 for RFD.

Transmit tones are not allowed on this list. Sometimes TX and RX tones are the same. It's fine publishing those tones as long as they're labeled RX and not TX.

And what the heck happened to YYI? I'm not going to remember your initials, I loved hearing YYI on the 45 (or calling it). Call my cell next time you're up here since I can't be on the 45 at work.

Well thanks, I see the reason for the PL. The reason I asked is I live in the Bay Area and there Santa Cruz Fire is on 154.325. I don't listen to them that much and lock them out. When I'm in the Redding area I forget sometimes to unlock them and miss the action. I had the same problem with Sacramento Metro Fire. They are on 154.190 and so is Berkeley Fire. Once again the same. I lock out Berkeley but when I'm in SAC I didn't unlock it. Using the PL is a lot simpler than having to Lock and Un-Lock freqs.

By the way found the PL

Trestle over the American River floodplain has almost completely collapsed and is still burning furiously.
City and Metro are trying to save the rail bridge over the river itself.
Bigger rail story than fire. Trestle is just above the Elvas "Y", and the UP mains to Southern Cal and the Bay Area are both cut off from one of the biggest and busiest yards in the country.
Expect the entire U.S. Rail network to feel this one.

Thanks, guys ...

I posted a story on my railroad blog several hours ago at http://eldoradowestern.blogspot.com/2007/03/union-pacific-trestle-fire-burns-near.html.

I didn't say it in my original post, but I was looking for anyone who caught IC radio traffic.

From: Jake H
Topic: 11801 Message: 11808

Looks like my wife and I will be let off at Roseville instead of Sac on an April Amtrak trip home over the Rockies. I've seen plenty of fires but watching the KCRA.com video had my jaw dropped the whole time. Just the sheer power, persistence and consequence of it. I don't just see firetrucks and flames and smoke, I see hundreds of phone calls being made throughout UPRR and people getting woken up. Old dusty operation binders labeled "bridge fire SOP" being pulled off of bookcases etc. Rebuilding over the floodplain is one thing but if the trestle over the river catches fire UPRR will definitely be hurting for a while. KCRA showed some small river fireboats and portable river pumps putting streams on the bridge, with the flames looking like 20-30ft from the start of the river span. KCRA got a cameraman on the bridge over the river at one point - interesting point of view of the fire. They're concerned for fiber optic conduits under the bridge too. Better use the ATM while you can. :)

UP Road 161.310 for the valley sub north of Sac is a lot more active tonight at 11pm. Last train usually runs through around 10 and I've got a train running through now at 11.

Thanks for the coverage guys. Too bad we don't have live scanner traffic (that I know of at least.)

Too far away to hear the dispatch but not too far away to see the smoke. I was on my way home from the station and saw the plume from just south of Hamilton City. Thats approx 100 miles if you drive it. As the crow flies, maybe a little closer.

Still active fire at 0630 this morning and still concern for the power lines that stretch across the rail line and Business 80.
The bridge over the American River is intact, but a UP maintenance-of-way crew had to cut the rails at the North end to prevent the rail buckling from causing structural damage.

Red Bluff in northern California - population 13,000 - 6 FT + reserves - 1 station - ambulance from local hospital - turnout times were not accurately recorded apparently

Are there any county fire station locations on those maps?

The 13 maps shows a pretty small area local to Red Bluff, and it looks like "Antelope" Station 1 would be the only non-city station within the boundaries of the wider-area map(s). IIRC there are county/CDF stations outside the maps' area on all sides.

Not quite sure what your point is below. However for the county locations, Harry is right. CDF Antelope and Tehama County Station 1 (same location, Schedule A) is right near the very east tip of the city limits, outside the city. There is a fast-response volunteer county station #14 Dibble Creek just north and west off of the map, and a slower response volunteer county station #4 east of the map. 14 can typically staff an engine and water tender in time to be 3rd in on a city call after city and station 1 empty out.

All dispatched by CDF.

Jake H wrote:
> Not quite sure what your point is below.

I couldn't quite figure it out either, Jake, but I think he's pointing out what the Matrix report already states: that two of the response-time components for which the City of Red Bluff has targets (one minute each for call processing and for "turnout") could not be verified by Matrix, since those components are not captured by the County/CDF CAD system.

Since Tehama County's CAD-generated numbers track only driving time, Matrix added one minute to the drive times for reflex (or turnout), but did not quantify call-processing time. However on page 28 of the report it says that RBFD's overall response time target is met for 92% of their calls (including calls outside the city limits to which they are dispatched), while their own target is 90% of calls. RBFD, of course, has no control over call-processing time.

The report didn't even address other response-time components, which were beyond the scope of their study anyway (such as free burn, permitted burn, notification, setup, vertical response, combat, and overhaul), but from this Matrix report and Red Bluff's Standards of Coverage assessment, it appears that those elements over which RBFD has control are all being met.

Looks like a non-issue to me.

hm

Us lucky folks here in Mendocino County just got our hands on a brand new comm trailer. Just rolled in today from back east. Plan is to have all the bases covered, VHF low and high band, UHF, 800mhz and a cell booster. We will even have a CHP extender unit in our trailer so when we have to play with the CHP guys they will be able to extend off our trailer. I'll get pics and post them up when we get stuff installed. This thing is going to be a pimp in the comm unit world.

11826. RE: [NorCalFire] Lightning Strikes in the Sierra's

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-04-07 03:15:32 UTC
From: Butte County Public Safety Scanner
Topic: 11812 Message: 11826

Any word as to the nature of the lightening? Dry, wet? How are the fuels where the lightening is hitting?

Thomas Miller

Butte County Public Safety Scanner

gId=11814/stime=1174121396/nc1=4438965/nc2=2/nc3=3> Looks like the sierra's is starting to get some good cumm builds with some lightning associated (http://www.strikest
<http://www.strikestarus.com/index.aspx?id=20> arus.com/index.aspx?id=20). Curious if
anyone has the Tahoe FS freq's

From: Scott Biddle
Topic: 11812 Message: 11827

I was in the Lake Tahoe Basin today and there was lighting, but rain was falling. On the other side of the sierras (Reno) we got our first big fire of the year, 80 acres went up. The incident was called Galena, and it was ripping for a while. Sierrafront.net has all the info you'll ned on it.
As for frequencies
Tahoe NF
168.7750 Forest Net
168.1750 Fire Net
Lake Tahoe Basin Mgmt Unit
172.3750 Basin Net
Toiyabe NF
169.8750 Forest Net
CDF NEU-E

11828. Tracy radio link

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-04-07 06:01:45 UTC
From: David Coursey
Topic: 11828 Message: 11828

Hi:

I am in the process of setting up an audio feed from a scanner here in my home office in Tracy, San Joaquin County. What would people like to hear? The test feed is on tracyscanner.com.

David

From: Nick Caldwell
Topic: 11860 Message: 11860

Vehicle fire into the vegetation, Hwy 70 near Cole Canyon Road. Moderate rate of spread, structures threatened. B2116 is IC, reporting 1-2 acres in olive orchard and into sheds, continues to burn to the east under strong winds (20mph+ gusts). Requesting 2 additional engines. C205 unavailable all week, other aircraft on long delay. Requesting to continue an air attack and a copter at least.

Dispatch - 151.400

Contained at 2-3 acres, canceling aircraft. For my ears, this was one
of the first aircraft dispatches of the season for Butte, it must be
getting around to that time again...

Pamela,
Goto the the Truckee CHP CAD and read about the fire near the freeway.

This and a few more insignificant paragraphs at
http://www.sierrasun.com/article/20070521/NEWS/70521003

"A quick-moving wildfire on the north side of Interstate 80 near the
stateline is being attacked by multiple agencies. As of 1:45 p.m.,
I-80 was partially closed westbound at the stateline as firefighters
from the U.S. Forest Service, CalFire, Truckee Fire and crews from
Reno began initial attack on a 20 acre blaze that is moving up hill
into timber in Sierra County."

Temp there at 2:00 pm was reported to be 68?

Per Truckee CAD, as of about 20-25 minutes ago, there will br 50 engines and
5-7 aircraft on the fire in the next hour or two.

Amador-El Dorado Unit has finally been wholly placed in the North. Their new Unit designator is 2700. Keeping in line with the Northern numbering scheme. Particular equipment designators have not changed, so 4532 is now 2732 etc.

That's a bummer!
I've been seeing and hearing the 4500 designator for the past almost 20 years that I've been going up that way and here's another change.
As you can see I hate change.
Perhaps I hold on too much to tradition and routine but it is conforting in an age of change for change's sake.

Topic: 11892 Message: 11896

This fire continues to grow, it has jumped Skyway (a 4-lane road) and is spreading out of the canyon blowing South. The IC has asked for evacuations for the entire canyon and the ridgeline. Chico PD is assisting with evacs on the ridge line and reported being Code-4 but fire on both sides of the road.

Many more engines, dozers, and crews requested. There are currently two tankers and one helo on the fire. 100 structures directly threatened. Skyway Rd. is closed in both directions for the last hour.

Tuesday 6pm - 15% humidity outside - 20mph gusts

Large smoke in the wind drifting from the north heading south along the
western side of the valley. Can't see the source yet but will be able to
in 10 minutes on my way somewhere. Anything happening up north?

171.575 Shasta Trinity Forest
151.160 Shasta Trinity CDF

Could even be as far as Klamath at the speed of this wind.

Actually apparatus numbers and assignments will
changed based on battallion...
Battallion 1 will have 2761,2771,2781
Battallion 2 will have 2762,2772,2782
Battallion 3 will have 2753,2763,2773
Battallion 4 will have 2774,2784,2794
there will be changes to utilities also to match
corresponding battallions..

Taken from wildlandfire.com Hotlist:

Originally published 03:57 p.m., May 22, 2007
Updated 03:57 p.m., May 22, 2007
Firefighters today are battling a reported 40-acre forest fire that's burning in the Shasta-Trinity National Forest near the McCloud arm of Lake Shasta, a U.S. Forest Service spokesman said.

The fire is about seven miles northeast of the McCloud Bridge Campground near White Rock Mountain, said spokesman Mike Odle.

Smoke from the Bolli Fire might be visible from Interstate 5 and along Lake Shasta, but Odle said lake users and lake area residents should not yet be alarmed.

There are about 60 Forest Service personnel fighting the fire, including 18 smokejumpers, three engines, two hand crews, a helicopter and a water tender, he said.

The fire is the 31st in the Shasta-Trinity National Forest since Jan. 18, he added.

Containment is expected sometime Wednesday, Odle said. The cause of the fire is under investigation, he said.

From: nitrobear@comcast.net
Topic: 11904 Message: 11904

Pamela is right on top of this one, good show! I'm listening to 151.385 MHz which is the tactical for the Honey incident I think and there is LOTS of traffic there!
They are reporting lots of spots south of the Skyway now at 17:30 which should make the commute up the hill a real mess. Several spots reported 5+ acres with lots of wind on them. Should make for some significant runs across that plateau. Yikes! Welcome to fire season 2007! ;-(
Dispatch on 151.400
Tactical on 151.385
Air tactical on ???????

Well, at least if it burns now, it won't burn later..??

Guess the diversion of traffic has the 99/Neal intersection screwed up; one accident there already per CHP CAD.

Thanks for the good word, but won't be hearing much for a bit; I just volunteered to help evacuate animals if needed and have to go empty the truck.

From: nitrobear@comcast.net
Topic: 11908 Message: 11908

They are pumping more air assets on this incident. I heard one of Captains say it was "130 Acres +". They are chasing spots on the south side of the Skyway and some dozers are now showing up from Tehama and Shasta I think.
Sounds like this will be an all nighter. Good news is that the fuel on that plateau is pretty grassy. This will give the troops a good shake down for the fire season maybe. :)

One question here...the Chico paper said that the North Valley animal rescue/disaster group had been activated and was staging; the CHP CAD stated no provisions made for animal evacuation.

Anyone know what the deal really was? Because if the rescue group *was* standing by, CHP certainly should have known.....

Thanks!

Well Pam, you should listen to the horse's mouth (no pun intended). NVADG is narrowband simplex on 155.2725. You can bet if activated, they would coordinate over that freq. NVADG also has access to mutual aid freqs in their radios such as white fire, clemars, and med channels such as 155.220 etc.

Nitro, I understand air attack was on 151.310 for this one. 122.925 was also given over the air to Copter 101 who was enroute to an incident, but I don't know if that was for Honey Run, one of the fires up here in Tehama, or for the McCloud fire (thanks sh for the report!)

I have put norcalscan.org live scanner on a rough fire season mode. No more cops at least (finally). I'll fine tune it over this 4.5 day weekend (along with FireCenter 2007 and this list) to gear up for this season.

From: Jake H
Topic: 11913 Message: 11913

I'll update our welcome messages to new members to emphasize this, but new members are automatically placed on moderated status until they are proven to be breathing human beings interested in fire radio of northern california. Too many spammers etc. get through without this.

That means everybody who's new this season, joined over the winter etc. Your posts have to be cleared by a moderator before they show up. You may notice your posts are delayed and show up a few hours later. Give us patience as we go through and update the newly proven members.

This includes those of us who have been here for 3 years but just changed their email and joined the group under a new email. Bear with us.
Jake and the Norcalfire moderator team

Pamela,

They were requested and were apparently staging initially at Search & Rescue Headquarters and then supposedly moved to Skyway and Honey Run. But a rep from NVADG was requested to respond to the ICP (Incident Command Post) and they never showed up. I'll be contacting the NVADG reps tomorrow to find out what really happened.

Insofar as CHP knowing and others, fires like this challenge inter-agency communications and things like this can be lost in the mix.

On a side note, I spent several hours at the ICP as part of the Sheriff's Office. I had time to take a number of pictures which I'll put in a public spot tomorrow and send out a link...

11921. Butte Veg - Neal IC

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-05-23 17:30:48 UTC
From: Nick Caldwell
Topic: 11921 Message: 11921

Vegetation on Neal Road, power lines down. Initial report as 1 acre spreading with a 3-5mph wind. IC requesting Neal Road closed. Skyway is still down to one lane from the fire yesterday, so getting in/out of the upper ridge just got very difficult. With the winds a lot less than yesterday and all the resources diverted from the now-calm Honey fire, hopefully they can catch this one before it gets a run, the Field Observer reports slow to moderate spread, but it is making a run towards the canyon. They have two copters on scene and hooking up the buckets, hoping to catch the fire before it gets into the drainage.

Dispatch - 151.400
Tac 11 - 141.445

Fire is contained, most resources committed for 3-4 hours. No word on
final size, but thankfully the wind has died down today. Neal Road
will be closed for at least another hour.

Pamela,

I'd try it again...maybe check your browser settings. I checked and permissions are marked public and I've had other people in the general public already look at the album...

Are there any good links to listen to the audio up there. I am in Kansas so it makes it kinda hard to listen way out there. Used to work for CDF out in that neck of the woods years ago. :-)

Thanks - 14:48 PST or 16:48CDT

Thanks Nick and Michael for sharing your interesting pics.
It's one thing to read posts about a fire or listen to the firefight on the scanner or scanner feed but like saying goes: a picture speaks a thousand words.

11930. Fwd: 15 of the Oakland hills fire control goats shot dead

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-05-23 23:20:31 UTC
From: Krissa Klein
Topic: 11930 Message: 11930

15 goats, used for fire control in Oakland hills, shot dead

Henry K. Lee, Chronicle Staff Writer <hlee@...>
Tuesday, May 22, 2007

*(05-22) 20:17 PDT *-- Someone armed with a small-caliber gun shot and killed 15 goats early Tuesday that were part of a herd hired to graze on fire-hazardous underbrush and weeds in the Oakland hills, police said.

At about 12:30 a.m., residents reported hearing shots fired above Greenly Drive west of Interstate 580. Police didn't find anything, but at 8 a.m., a jogger flagged down an animal control officer, saying there were dead goats in a portable corral in the hills of the King Estates Recreation Area, said Oakland police Sgt. Dave Cronin of the Oakland Animal Shelter.

Twelve of the 15 dead goats were found in a corner of the pen. The other three had apparently been dragged out of the enclosed area by wild animals -- coyotes perhaps -- and partially eaten, Cronin said.

A veterinarian plans necropsies on some of the goats today, after which police could confirm what kind of weapon was used, police said.

From the end of the rainy season until September, hundreds of goats are brought to the East Bay hills from the Carquinez Strait to Castro Valley to munch on vegetation and overgrown weeds to increase fire safety. The goats are hired from private herders.

In May 2002, two men shot and killed a goat in the same area. In the past, goats have been shot by pellet guns and mauled by dogs, authorities said.

"It just looks like for some reason, someone shot them," Cronin said Tuesday. "It's disturbing behavior for a lot of reasons. This behavior is often times indicative of much more violent behavior to come."

"When people don't receive the same kind of level of satisfaction from this they gravitate to something more disturbing."

"It's senseless violence against totally defenseless victims," Leroy Moyer, 69, president and founder of Voices for Pets, a Walnut Creek animal advocacy group, said Tuesday.

Moyer pledged $3,000 for information leading to the arrest and conviction of the assailant, and Friends of Oakland Animal Services is offering a $500 reward. Anyone with information is asked to call Oakland Animal Services at (510) 535-5640 or Voices for Pets at (925) 685-5388 .

Here is the 2PM report for the Honey incedent in BTU. I drove up there today to have a look. Skyway was one lane both directions and lots of engines prowling the road. Copters were doing drops directed by ground troops who had to "flash" the copter for orientation. They were dipping from Butte creek.
The fire blew over the rim right at a bunch of high end homes from what I saw! YEOW, that was exciting I bet!!!!! I think Mike had some great images posted that sort of showed the "pink" on a couple of homes which was evident on my drive by. Amazing that nothiing was lost up there...
Good show !!! We have the best of the best in BTU IMHO! Nice work!
Exciting way to start the season!

Bolli Wildland Fire

INCIDENT UPDATED: 2007-05-24 01:07:49 ET
Summary

The Forest Service is currently engaging a fire seven miles northeast of McCloud Bridge Campground near White Rock Mtn. The Bolli Fire is currently 815 acres in size and is 5% contained. 18 smokejumpers, 10 hand crews, three engines, two helicopters, one water tender and air attack are on the fire. The fire does not threaten any structures and recreation along Shasta Lake is not affected. The area is very inaccessible and in the middle of nowhere. For more information contact the Shasta-Trinity National Forest Public Affairs Office at (530) 226-2500.
Basic Information Incident Type Wildland Fire Cause Under Investigation Date of Origin 05/22/2007 at 0725 hrs. Location 27 miles northeast of Redding CA Incident Commander Boyer Current Situation Total Personnel 232 Size 815 acres Percent Contained 5% Fuels Involved

Timber and logging slash
Fire Behavior

Today's fire perimeter movement has moderated.
Significant Events

Driving time to access the fire is approximately 2 hours from the incident base camp. Fire area is very remote with poor accessibility.
Outlook Planned Actions

Swartzlander's Type 2 Incident Management Team is assuming command at 6pm on May 23 2007.
Projected Movement

During the next 12 hours starting from May 23 at 6pm: Fire is moving southeast into Chatterdown Creek. Diurnal winds will likely continue to push the fire south down the drainage.

During the next 24 hours starting from May 23 at 6pm: Potential exists for fire to continue south down Chatterdown Creek.
Growth Potential

High
Terrain Difficulty

Extreme
Remarks

Equipment and Crews: 10 crews, 2 helicopters, 3 engines, 1 dozer, 2 water tenders.

Weather Current Wind Conditions 1 mph NW Current Temperature 78
degrees Current
Humidity 18 %

Don't know anything about it but sounds like there's a small startup in the Centerville Rd. area of Butte Creek Canyon... This came off of CHP's web page.

Doubt it'll do much. Not much in the way of winds.

Mike

Incident: 0813 Type: Fire Location: CENTERVILLE RD AT VORHEIS LN Zoom Map: 5782 1J

From: Kim Noyes
Topic: 11934 Message: 11947

Bolli Wildland Fire

INCIDENT UPDATED: 2007-05-25 10:26:47 ET
Summary

A Type 2 Interagency Team is currently managing a fire seven miles northeast of McCloud Bridge Campground near White Rock Mtn. The Bolli Fire is currently 730 acres in size and is 70% contained. 17 hand crews, 25 engines,three helicopters, nine water tenders and five dozers are on this incident. The fire does not threaten any structures or recreation along Shasta Lake is not affected. However, Hirz Bay boat ramp is currently closed to the public due to the use of Hirz Bay campground for the Incident Base Camp. The fire area is very inaccessible. For more information contact the Shasta-Trinity National Forest Public Affairs Office at (530) 226-2500.
Basic Information Incident Type Wildland Fire Benefits & Objectives

Personnel and public safety. Protection of natural resources. The incident management team is focusing their efforts on maintaining the current fire perimeter.
Cause Under Investigation Date of Origin 05/22/2007 at 0725 hrs.
Location 27 miles northeast of Redding CA Incident Commander
Swartzlander Current
Situation Total Personnel 582 Size 730 acres Percent Contained
70% Estimated
Containment Date 05/27/2007 at 1800 hrs. Fuels Involved

Timber and logging slash
Fire Behavior

Fire area is very remote with poor accessibility. An old logging road was opened today on the west side of the fire, improving access. Last nights fire perimeter movement was minimal, with rollout being the primary reason for fire spread.
Significant Events

Hirz Bay Campground has a temporary closure in place which may affect the Memorial Day Holiday acivities. Driving time to access the fire is approximately 2 hours from the incident base camp. Fire area is very remote with poor accessibility.
Outlook Planned Actions

Swartzlander's Type 2 Incident Management Team is assumed command at 6pm on May 23 2007. Today, crews will continue to construct fireline along southeast flank of the fire.
Projected Movement

Given the current constraints the chosen managment strategy will likely succeed.
Growth Potential

Medium
Terrain Difficulty

Extreme
Remarks

17 Handcrews, 3 Helicopters, 25 engines, 5 dozer, 9 water tenders and 53 overhead resources.
Weather Current Wind Conditions 3 mph SW Current Temperature 57 degrees Current
Humidity 35 %

Per CAD out of Stockton, this thing's got a command post and staging area so
it seems it's not too small and not over yet.

There is no fire in AEU.
They have determined this is drift smoke from the fire in Calaveras County.

How far outside of San Andreas?
In the Leonard burn area from 2001 or up the hill from that further east or just north or south of the Leonard in newer fuels?

11989. Rules and Posting Guidelines

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-05-26 07:04:28 UTC
From: Jake H
Topic: 9374 Message: 11989

Alrighty. I think we all got off to a fast start this season and we haven't had time to remember the rules and guidelines set for NorCalFire. These rules allow this list to operate smoothly, with the least complaints and problems. They will be sent monthly to the list. A lot of the rules are common sense rules we have all hopefully learned as mature adults. There are others that pertain directly to NorCalFire, and do not vary much from the other fire and scanning radio Yahoogroups of California.

Here are the recent additions/clarifications to those rules and guidelines:

1. Acronyms are allowed. Too many people on this list are in the profession that utilizes these acronyms daily. They are not expected to stop using them when posting to the list. Instead, we are expected to learn what it takes to enjoy the fire radio hobby. Anything less would be downright lazy of us. There is a link now at the bottom of EVERY post that will allow you to find any resource needed to understand fire radio.

2. No one-liners, no one-acres, no thank-yous, no welcomes,
All four of these add useless noise to the list. Please refrain from posting these. Thank You's are implied on this list. We all thank YOU for contributing your information. If you feel like a direct thank-you is needed, send it directly to that person offlist. If you think they should have recognizance on the list for their contributions, ask a moderator. And if a Thank-You slips out on the list, don't send a You're Welcome! back. And don't send a thank you to the you're welcome. And don't send an I'm Sorry to the list when you realize you sent a you're welcome to a thank you.

3. Sphere of Influence.
This is a pet peeve of mine. So the fire is 200 miles from you? Don't worry about it. We don't need to know if your second cousin's best friend's sister lives 10 miles away and you want every little detail about the fire. The person who posted about the fire will post more info as they see fit. If you know of immediate family in the area, you may ask the poster privately, using their direct email. Don't use the list please. You will be moderated if this is abused.

Choose your home and stay put. If you live in Fresno and have a keen interest in Butte County fires, then move to Butte County. Do not live vicariously through the list and ask every little detail about incidents in Butte County. Etc. Etc. Etc.

Thank you.
Jake

Okay folks, let's breathe a little bit. The season is just beginning.

If an incident is still in the initial attack phase, can we please restrain ourselves from a sending a dozen posts with no intel? Once strike teams start rolling to an incident and intel is available, go for it.

And Pamela was right on with her request about putting the essential info in the Subject line.

Example follows;

"BUTTE: Vegetation, Chico area, Honey IC"

COUNTY: Type, area, IC Name

Plus freqs in the body if you have them.

Stay Safe!!!

Gary N6MZX

Just to close the loop on this one, I heard the copter say it was a "smoldering burn pile" when he finally found it. I think they cancelled all resources but one engine to have a talk with the landowner.
Scary area down there that hasn't burned in years. Sorry I missed this thread earlier...

I would do the same for the CenCalFire and SoCalFire websites, and I'd make a couple of phone calls and get that username and password deauthorized.

Nelson Road cross of Galen Lane and Mill St.
McKnight Ranch, large warehouse about 1/4 involved at initial sit report; heavy black smoke apparent from a distance. Oxygen and acetylene tanks are in the building. Initial all-clear has been done.

Augmenting response with two truck companies.

Nothing further unless it becomes dramatically expanded to wildland or other structures.

That's it - prescribed burn off of Red Bank Road. Kind of surprising since that's a lot closer than I thought.

Most likely on one the following freqs if interested (I've heard nothing on TGU all morning):
151.175
151.190
151.445
151.460
154.280

Jake

12013. File - NCFposting.txt

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-01 11:13:52 UTC
From: norcalfire@yahoogroups.com
Topic: 12013 Message: 12013

How and what to post on NorCalFire.

1. Northern California Fire Radio

Any and all questions regarding how to monitor fire radio are welcome on NorCalFire. This may include how certain agencies work, their frequencies, methods of operation, and any other info to better our listening hobby. This list is also used for incident information for fires in Northern California.

2. Common Sense:

We know it's a fire. We know it's a new fire. So don't post New Fire or New Start in the subject line. By the 2nd message about the fire, it isn't new anymore. We'll see a new fire started by seeing a post with a new subject line. This is a pet peeve of mine, and many others. Expect it enforced.

3. Subject Lines:

Get at least the following: County or Jurisdiction, general location, incident name.
Example subject lines that please everybody include:
Butte - Honey Run Canyon
SHF Bolli Incident
Timber Fire, Lassen USFS Turner Mtn
Calavaras - Alpine Lake fire?

4. No one-liners, or one-acres, or thank-yous, or you're-welcomes.

This goes for the "play-by-play" posters. Please combine the information that you've gathered into a larger post. If you're posting sooner than every 15-30 minutes about a fire, you're posting too much. Wait for a size-up of the fire before posting. If it sounds like a large incident with lots of radio monitoring potential, then post it.

No Strike Team deployments, unless they're going to a Northern California fire that isn't posted on the list yet.

Don't send thank you's (or if one gets through, don't send you're welcomes back") to the list. If a large fire got covered nicely on the list, and it is quiet on the list, and you were directly affected by the posts regarding that fire, you may thank the list or the particular people. If this is abused, you will be asked to stop. This just adds to an already busy list.

5. Replying

Read all messages before replying. You might be replying to a question that got answered ten times already. Also use one message to reply to all items for any particular topic.\

6. Acronyms
Learn them. Do not complain about them. Too many people on the list use these acronyms in

their daily lives. They do not need to stop when posting to this list. It is expected of you to learn these acronyms if you want to enjoy fire radio of any degree. Acronyms are readily available on the Internet. There is a link to acronyms etc. at the bottom of every post. Use it.
http://fire.norcalscan.org/glossary.html

12014. File - NCFrules.txt

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-01 11:13:52 UTC
From: norcalfire@yahoogroups.com
Topic: 12014 Message: 12014

Thanks for joining NorCalFire! If we all follow these rules, the list will run nice and smooth. If you don't follow these rules, refer to rule #6

1. No whining or complaining.

There is zero tolerance for whining and complaining on NorCalFire. You will be moderated fast and if you continue, you will be removed from the list. There is no room on the list for your personal problems. That is what direct email is for. If you have a problem with someone on the group, try emailing norcalfire-owner@yahoogroups.com for help.

Do not whine about acronyms. Learn them or look them up. Print them and put them next to your screen. Too many people on these lists use these acronyms in their daily lives and will not bow down to your lack of appreciating the hobby. If you want to enjoy fire radio, learn how to listen to fire radio. We will NOT hold your hand.

http://fire.norcalscan.org/glossary.html

2. Keep it on topic.

Northern California Fire Radio. If it doesn't involve THREE of those FOUR words, do NOT post your message. We are not here to learn about what radios you have to sell, or how to turn on your scanner.

3. No one-liners, or one-acres, or thank-yous, or you're-welcomes.

This goes for the "play-by-play" posters. Please combine the information that you've gathered into a larger post. If you're posting sooner than every 15-30 minutes about a fire, you're posting too much. Wait for a size-up of the fire before posting. If it sounds like a large incident with lots of radio monitoring potential, then post it.

No Strike Team deployments, unless they're going to a Northern California fire that isn't posted on the list yet.

Don't send thank you's (or if one gets through, don't send you're welcomes back") to the list. If a large fire got covered nicely on the list, and it is quiet on the list, and you were directly affected by the posts regarding that fire, you may thank the list or the particular people. If this is abused, you will be asked to stop. This just adds to an already busy list.

4. Sphere of Influence.
So the fire is 200 miles from you? Don't worry about it. We don't need to know if your second cousin's best friend's sister lives 10 miles away and you want every little detail about the fire. The person who posted about the fire will post more info as they see fit. If you know of immediate family in the area, you may ask the poster privately, using their direct email. Don't use the list please. You will be moderated if this is abused.

Choose your home and stay put. If you live in Fresno and have a keen interest in Butte County fires, then move to Butte County. Do not live vicariously through the list and ask

every little detail about incidents in Butte County. Etc. Etc. Etc.

5. Replying

Read all messages before replying. You might be replying to a question that got answered ten times already. Also use one message to reply to all items for any particular topic.

6. Moderation

New members are automatically placed on moderation. This is mainly to stop the spam that has become pervasive on the system. It's also so that we (the moderators) know that you're okay, and not some kind of wierdo. You'll come off moderation when we feel that it's okay to turn you loose to the list.

Once off your initial moderation, you generally have to screw up really bad to be put back on moderation. One of the things that we will not tolerate is incivility. We are all adults here, and those of you between 13 and 18 should have enough maturity to act like an adult. We can disagree without being disagreeable. If you've been placed on moderation, you'll be taken off when the moderators think you can be trusted again. If you keep being put in moderation, we may ask that you leave so our time is not wasted in holding your hand and babysitting you.

7. Have fun!

This list is for getting the information about fires in NorCal out, so we all know what's going on. The news media isn't very much help in getting the specifics out, and you can listen to the incidents as they unfold.

If you have any questions, complaints, or suggestions, email them to norcalfire-owner@yahoogroups.com and we will try to get to them as soon as possible.

Jake, List Owner

Everyone:

I have put one of my radios on the Internet. It is tuned to San Joaquin County Fire Command 1/Red (154.130). Once I can do a reinstallation, I will add a better antenna and set the radio to something more interesting, such as CDF SCU.

Access the scanner at www.tracyscanner.com.

Check the www.wildlandfire.com Hotlist. Fire near ahoney Lake yesterday went to 500+ acres, 20% contained. The ST also may be enroute for coverage as they are expecting more lightning activity this afternoon.

Also, another fire down in Mono County near Colesville...150 acres from yesterday.....

1149 HRS.

Seen several engines from Carson City and Sparks, NV heading south on Hwy 395 heading toward the fire. Also Hwy 395 closed at the Holbrook junction area just north of Topaz Lake.

6/5/2007 @ 3:00 p.m.

Mark Struble, Fire Information Officer (Sierra Front ECC)

High winds of 40+mph on Tuesday, June 5 have thrown embers over the fire lines around the Larson fire. It is currently estimated to be at 600-700 acres and has jumped U.S. Highway 395.

CHP has closed U.S. Highway 395 to through traffic between Holbrook Junction (NV State Route 208) and CA State Route 182 in Bridgeport.

The fire is an immediate threat to approximately 50 homes, with another 150 various structures in the area. Neighborhoods between Larson Lane to Cunningham Lane in Walker, California, have been evacuated. An evacuation center has been set up at Walker Community Center (next to the town park). No structures have been reported lost at this time. The fire did burn over some equipment at a temporary firefighter camp behind Coleville High School, including a refrigerated storage unit and several Porta-Potties.

A Type I Incident Management Team is in the process of being ordered. Fourteen fire engines, seven handcrews, three watertenders, and one dozer are on-scene Airtankers and helicopters are temporarily grounded due to high winds along the Sierra Front.

An Incident Command Post is being set up at 1574 Larson Lane in Walker.

Man, we had a lot of lightening around Chico yesterday but quite a bit of rain also. I have been pinned with other issues all day and didn't even turn on my scanner. There had to be some sleeper/starts unless all the fireworks were just down here in the flats.
Maybe the rain was the difference? We had 3/8" here in NW Chico and several stikes right over head! YEOW! Our cats were scrambeling for cover! :-)

Hi Louie,

There's not really a Northern Calif site equivalent to Tracy's, but
try these, each of which has a different focus:
http://www.scancal.org/index.html (includes Lake County as of 2004,
still fairly accurate it appears)
http://www.norcalscan.org/ - great links, especially for fire season
http://www.geocities.com/peterconrad/scan/ Includes Lake County,
http://www.middletownca.com/SCANFREQ.htm " " "
http://www.askgriff.com/ukiahscan.htm - Mendocino County (to the west)
http://harrymarnell.com/humbfreq.htm - Humboldt County (to the north)
and
http://www.radioreference.com/modules.php?name=RR&ctid=199 has a few
frequencies.

Fortunately for us, these mostly rural areas haven't changed their
frequencies much in the last decade.

From: Mike Daly
Topic: 12039 Message: 12039

Ive have a BC780 using Proscan software and im testing the new version. IT has point to point scanner control. You have to go download the free software from there site. You will have the ability to have full control of the scanner and u can input freq change channels and all that good stuff. I need to see if the software works and they say it does. there software can be found http://www.proscan.org .

As of 6pm-ish here's what's happening

Dye IC - located on Ishi Rd south of Hogsback Rd. Seems to be just east of the major powerlines running north-south. Powerline Rd should be the west side of the fire.

TGU Local 151.370
Tac 3 151.175
Tac 1 151.145
CDF Air ground 151.220
CDF Air Tactics 5 151.295

Air Attack 240
Tanker 74, another S2 tanker, copters 205, 506, 102 are at scene

2 spots from the main burn. One of the spots going into the Antelope Creek draw. Main fire is/was 60 acres. Fixed-wing were grounded after some drops but they were asked back now. Smoke is pretty active.

At least 4-5 dozers and 5+ crews. Meals requested for 210.

All traffic (except Tac 1 - sorry) is on norcalscan.org live scanner

Thanks for the initial reports to the list!
Jake

7:40ish
I don't think there are any Plumas on here. Lassen has a few resources on it from their west side but most of the fire is in SRA.

Air Attack has bumped it up now to 90-ish acres. Major problem and focus are the spot fires. Multiple spots all over the fire. Worried that the winds will shift in the canyons in the next hour.

Fire is about half mile west of powerlines. They are trying to hold it from going down the drainage into the powerlines. Fire still has a moderate growth potential with lots of open line left.

Air attack 210 will relieve 240 around 8pm. Tankers are released for the night. Copters 205, 506 and 102 still working fire. I think 506 is returning to their tender at Redding Air Attack for the night.

From: Jake H
Topic: 12057 Message: 12060

Not sure of the incident name, but a large fire northwest of Orland is working. I came home to my wife watching the news and seeing the EDIS ticker bar across the bottom explaining the 25-30 acre fire with structures threated.

Road DD, Road 7 area.

Glenn County Fire is 154.400
State Responsible Area (CDF coverage) in Glenn county starts west of the major transmission lines. I don't think this fire goes that far. That makes it a Local [government] Responsible Area. Possibly using white fire freqs etc.

Copters are still working on the Dye incident, CDF Tac 3 151.175

8515 Silverbridge Rd, Palo Cedro, Shasta County

Full high level response, 8 engines, 3 water tenders, 2 dozers, 2 crews, air attack, 2 tankers, 1 copter. Silver I/C is BC2411. Redding BC3 has responded to scene to assist.

Initially reported as 5 acres, rapid spread, maily grass and some mixed fuels. I/C requested 6 addnl engines & 2 addl crews.

Several requests from Redding for a size up have gone unanswered.

I/C requested CHP to close Silverbridge Rd at Hwy 44.

SCSO is asking if there will be any evacuations - unknown at this time.

East side equipment being moved down towards the valley - new addnl response being paged now for 2 more water tenders WT73 & WT46.

Little further info: walk in report of bridge on fire, perhaps railroad bridge. All train traffic has been stopped.

17:17
...waiting for a report...
(for those who are unfamiliar with the area, it's Jarbo Gap/Concow area...thanks, copter for needing an orientation LOL)

PNF Battalion reporting smoke visible, seems to be on the side of the river away from the tracks...old abandoned rail bridge, copter required, inaccessible to personnel. Powerlines above bridge; exposure to the uphill side.

From what I heard on the Cal Fire local tone 4 they were doing smoke checks along the ocean, the smoke was a hand crew from Alder Conservation Camp burning slash they had cut. No uncontroled fire. As we are Cal Fire region 1 on the coast from Santa Rosa north. Region 2 is the valley east of us Shasta, Redding etc. Beyond that I don't know the regions and have been looking for a map of the regions.To find where this copter was from.I heard our copter 102 released fron an incident in region 2 several days ago.

The question is, has anyone seen a Cal Fire Vehicle with a number on the bumper that started with 5, where was it from?
Thanks,
Joe Lacey

12075. Fire in Del Porto Cnyn. SCU?

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-20 00:54:20 UTC
From: firecop6284
Topic: 12075 Message: 12075

BEU just sent a dozer to Del Porto Cyn. in east SCU 9 miles up from I5.
I was on a fire last year in the same area. Anyone have any info?
This should be running on SCU local. Not able to get any online feeds.

AIR ATTACK 500 is over the area and reports they are unable to find anything in Del Puerto Canyon. This area burns perennially, but sounds like there is nothing burning at this time.

The Region 5 you are referring to is different than the "Regions" that split the state CalFire agency up. Just like California splits the state into 4 regions to organize its CalFire agency, USFS splits the US into different regions, and there are multiple forests in each region. As Don Root stated, the USFS region that covers our sphere of influence is Region 5. A 3 digit copter starting with 5 will most likely be a federal USFS copter out of a forest in region 5.

A 3-digit copter starting with 1-4 will be from a CalFire region 1-4.

As stated in Bob Bergs post. 5 units are CALFIRE HQ, ACADEMY, and this year NORTH and SOUTH Region personnel . Also we have AA-500 and AA-505 which are spare OV-10 Air Attack Ships, AA-501 and AA-502 which are training ships (Cessena 337 push pull aircraft). Also we have Copters 901 and 902 which are spare 205+++ helicopters. Copter 106 is in for maintance so you must have heard 901 or 902. We don't use the R letter anymore.

CDF SCU has dispatched COPTER 106 about 12 times in the past few days
from Alma. Are you sure she's still down for maintenance? Maybe they
call her 106 when it's really not?

5500 is the Academy near me in Ione. 55XX chief officer vehicles are a common sight around here, and the academy officers frequently provide D and BC coverage for AEU officers on vacation, special assignments, and major incident command team assignments.
As for engines with 55XX on the bumpers, those units spend most of their time on the academy grounds, except in the spring, when they rumble through Amador County with big STUDENT DRIVER signs on them.

By the way, they claim CDF's new name is supposed to be two words, all upper case (capital letters), and no hyphen in between. So, "CAL FIRE" instead of "CalFire". Might take us all some time to learn it that way, eh? Whew!
Best Wishes, Cap

That¹s what it says on the new Nomex, but it isn¹t in keeping with the CalTRANS example. I¹d vote for CalFIRE over CAL FIRE, which looks funny to my eye, but whatever....

1/4 mile NE of Markleeville, CA. 1.5 miles SW of Indian Creek Campground (BLM) off Airport Road. Started this morning 0300 hrs. Currently 100+ acres with 30% contained. Burning in Mixed Pinon-Juniper, Sagebrush & Grass.

CA SR 89 is currently closed between the intersection of CA SR 88 at Woodfords and through the Markleeville area & Monitor Pass to the intersection with U.S. 395 near Topaz Lake.

Indian Creek Campground is under a voluntary evacuation. Two structures are threatened at this time.

Temporary Flight Restrictions (TFR) are in place for a five mile radius and 10,000 feet above the incident. The Alpine County Airport is being used as a helibase and is closed to general aviation. A Type III team has been ordered.

Hand Crews:6 Engines:10 Watertenders:1 Dozers:1 Airtankers:3 Helicopters:2

Major concern is the weather. Area is under Red Flag conditions. Fire Weather Forecast for Incident: Sunny & becoming windy; max temperature 86, min. humidity 8%, SW winds increasing to 15-20 mph with gusts to 35 mph after 12:00 p.m. through midnight.

Fire is at 300 acres, evacuations have been lifted. 6 crews, 23 engines, 3 dozers, 5 water tenders, 3 helicopters, 5 air tankers (know of two still at Chester for the evening, 3 helicopters, and one air attack. 8 out buildings, 10-12 vehicles, and one boat was reported as lost. no homes destroyed and one injury. Under invesitgation but the SIFC news release had a big write up about fire works on federal lands and about increasing fire danger.

All this info was a news release that I got at 1800 hours. I work for Chester fire and was once a forest service employee. If i find out more I will add it to the replies. How is that fire in Butte Creek? Busy day all around here. I heard about a fire on the Plumas near Clipper Mills, Bieber, and a few on TGU and SHU as well.

This sounds an awful lot like the "Plateau" fire near Reno. Last I heard that fire was also at 300 acres, 5 tankers and 2 helos.

Update on the Pine Fire as of 1800 hours From SIFC Dispatch
Fire is at about 300 acres. Resources include 6 handcrews, 23
engines, 3 dozers, 5 water tenders, 3 helicopters, 5 airtankers (only
tanker 88 and 89 are at Chester for the evening and tanker 21
diverted to the Butte Creek Fire about 4 or 5pm), and 1 air attack.
No homes lost, but did lose 8 outbuildings, 10-12 vehicles, 1 boat
and there was one injury. Fire in under investigation but there was a
paragraph about the rising fire danger and use of fire works on
federal lands. Evacuations have been lifted and that the Evac Center
that was set up was not needed.

The fire is getting worse by the second up there. At least one structure confirmed to be fully involved from ash/embers dropping and mandatory evacuations are in effect for Mount Raineer, Pyramid, and Mule Deer areas off of North Upper Truckee as the fire is on a hillside below Echo Peak.

12128. RE: [NorCalFire] Angora Incident - South Lake Tahoe

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-24 23:09:14 UTC
From: Butte County Public Safety Scanner
Topic: 12125 Message: 12128

The entire North Upper Truckee area is under evacuation as a 250-acre fire is growing rapidly. Structures are either on fire, threatened and evacuations are underway. Evacuations are also taking place in the Saw Mill Pond area, where the fire appears to be heading.

People who have been evacuated are told that they can go to the South Lake Tahoe Recreation Center on Rufus Allen.

Reporter Susan Wood says that she saw at least two homes on fire and "more structures are going up (in flames.)" It appears that three fires are simultaneously underway. Two of the fires appear to have been spawned by the initial fire, which started at around 2 p.m.

The main fire is located between Highway 50 at Echo Peak and North Upper Truckee and is headed toward Highway 89, Wood reported. People have been driving frantically out of the area and others are running on foot. A motorcycle rider was seen getting off his bike and putting out a fire on a bank, Wood reported.

One man screamed "I've put three fires out already," Wood reports.

Outside agencies have been called in for help as the fire is moving fast and is being whipped by high winds. California Highway Patrol officers are leading the evacuations.

A structure is reported fully engulfed in fire at 716 Lake Tahoe Boulevard, and it is believed that ash from the fire may have caused it, according to police dispatch reports.

At last report the fire was at least five to 10 acre-fire and growing near Mount Raineer and North Upper Truckee in the Echo Summit area, according to Camino Interagency Command Center. A Tahoe Daily Tribune photographer reports the fire is growing, with plumes of smoke growing hundreds of feet in the air.

Firefighters have been asked to stage at Seneca and North Upper Truckee. Firefighters from throughout the basin are responding to the fire. At least three air tankers are fighting the growing fire.

Tahoe Mountain and Lake Tahoe Boulevard traffic has been ordered stop by authorities.

A homeowner, Jim Furguson, who lives on Coyote Ridge, sprinted down North Upper Truckeee toward the "Y" saying, "there's not much you can."

Witness Amanda Fehd, a Meyers resident, said the fire was very small and it grew within five minutes.

" It's growing. There are humongous billows....It is terrifying to everyone to see this," she said.

1) Jake - just home from 7000' - so you were 'high' again this weekend?

2) SHU just broadcast an information message that SHU is expect "high demand" for resources for the Angora incident - so it looks as though some Shasta people who missed out on the trip to Susanville last night might get a week in Tahoe instead!

El Dorado County Sheriff's Office has told the Camino Fire agency that so far 12 homes or structures have been destroyed. Lake Tahoe Boulevard traffic has been ordered stop by authorities. Authorities are alerting residents of Gardner Mountain to be prepared for evacuation.

At last report the fire was at least 350 acres and growing in the Echo Peak area, according to Camino Interagency Command Center. A Tahoe Daily Tribune photographer reports the fire is growing, with plumes of smoke growing hundreds of feet in the air. The fire can be seen from Carson Valley.

Firefighters have been asked to stage at the airport but have been moving as the fire has grown near them. Firefighters from throughout the basin are responding to the fire. At least three air tankers are fighting the growing fire.

Traffic controls were in effect on Highway 50 in Meyers to make way for the large volume of vehicles leaving North Upper Truckee Road.

12141. ANGORA INCIDENT

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-24 23:57:45 UTC
From: Dave
Topic: 12141 Message: 12141

Fixed wing aircraft are having great difficulty due to extreme turbulance in the fire area. Typical of the east Sierra when the wind is blowing out of the west.

Tankers 88 & 89 out of Grass Valley both requested aircraft inspection of their aircraft when they landed for refill. Were getting +3gs an -2gs. Wanted to check for loose rivets and screws and skin buckling. Sounds like a rough ride!

Aircraft are also using Minden and Stead AABs. Tankers 10 & 21 also on the fire plus several SEATS and helicopters.

At least 50 homes have reportedly been destroyed as the Angora fire continues to burn out of control, moving in a northeast direction toward the city limits of Lake Tahoe, according to the Camino Interagency Command Center.

No injuries have been reported. The burned homes are in the Mule Deer Road, Mount Raineer, Clear View and Lake Tahoe Boulevard areas. The fire is now about 500 acres and growing, said public information officer Jackie Faike.

Topic: 12149 Message: 12149

http://www.sierrafront.net/news%20releases.htm
(http://www.sierrafront.net/news%20releases.htm)

New Initial Attack Incidents:
June 24 at approximately 1pm: The Mae Anne Fire is a new fire burning in the northwest area of Reno. Federal firefighting resources are assisting. The fire is under the jurisdiction of the Reno Fire Department, please call the Reno Central phone number for details. At 3:15pm another fire off of Mayberry was reported near the Mae Anne Fire, also under the Reno jurisdiction.
June 24 at approximately 3pm: The Angora Fire is burning in the Lake Tahoe Basin Management Unit in the North Upper Truckee area near the Tahoe Paradise Subdivision, south Lake Tahoe. Some of the air tankers working the Angora Fire are operating out of the retardant base at the Minden Interagency Fire Center. A large plume from this fire is visible from the Sierra Front and affecting air quality in the area. This incident is being managed by the Camino Interagency Command Center, for fire information contact 530-647-5220.
*** June 24 at 4:30pm: Fires in the area have produced large volumes of smoke that is affecting the communities of the Sierra Front. Fine particulates in the air may create unhealthful conditions for area residents, particularly the elderly, very young, and those who suffer from respiratory ailments. Affected people should avoid outside activities if possible and seek medical attention for breathing difficulties. This evening and tonight smoke is likely to settle into low areas and may affect visibility along area roadways. Drivers are urged to exercise caution and use headlights when traveling in smoke impacted areas. Also, the ambient smoke will make the detection of new fire starts more difficult so please continue to comply with the fire restrictions that have been in place since June 1. ***

12152. RE: [NorCalFire] Angora fire update

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-25 02:05:19 UTC
From: Butte County Public Safety Scanner
Topic: 12150 Message: 12152

At least 50 homes have reportedly been destroyed and 500 are threatened as the Angora fire continues to burn out of control, moving in a northeast direction toward the city limits of South Lake Tahoe, according to the Camino Interagency Command Center.

No injuries have been reported. The burned homes are in the Mule Deer Road, Mount Raineer, Clear View and Lake Tahoe Boulevard areas. The fire is 500 acres and growing, said public information officer Jackie Faike.

Kit Bailey, the agency's fire chief for Lake Tahoe, said high winds were hampering fire crews in their battle against the fast-moving blaze, according to the Associated Press.

The blaze in the upper Angora Creek drainage about five miles south of Lake Tahoe prompted evacuations of the Angora Lakes Resort and hundreds of homes in the North Upper Truckee Road area of Meyers, located next to South Lake Tahoe, authorities report.

"I can't stay on the phone. We just got a notice to evacuate," said Gloria Hildinger of the Angora Lakes Resort. "The smoke is getting pretty thick. It's probably two miles away and we're hoping it won't reach here."
Flames were being fanned by winds of up to 25 mph, and the National Weather Service was calling for gusts of up to 35 mph on Sunday evening.
"They're definitely having problems with the winds up there," said Linda Curran of the Camino Interagency Dispatch Center in California. "The fire has a rapid rate of spread because of the winds."
At least five air tankers and two helicopters were assisting more than 400 firefighters on the ground.
The fire, believed to be caused by human activity, was reported at 2:14 p.m. Sunday on U.S. Forest Service land..
Its huge smoke plume can be seen for miles around the Reno-Tahoe area.

Local Govt. Strlike Teams:
San Andreas has been toning local govt duty officers for the past hour with instructions to contact the Command Center, so Calaveras should have structure protection units rolling tonight.
El Dorado County has already sent a bunch of resources - so many that Engine 3 just notified Camino it is in service. Probably would have been sooner, but they had to round up the draft horses and fire up the steam boiler :-)

Easiest way to remember which victor for first day of fire, victor will always is the reload base's victor.

Each base is pre-assigned a victor that is always there's.

North and South Ops almost always issue's a new victor and air tactics to the fire for the second day on.

So look for changes before the aircraft take off in the morning tomorrow.

12161. RE: [NorCalFire] Re: Angora Incident - Frequencies

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-25 04:11:22 UTC
From: Butte County Public Safety Scanner
Topic: 12153 Message: 12161

A state of emergency has been issued for El Dorado County as at least at least 52 homes have reportedly been destroyed and 500 are threatened. As of 8:30 p.m. the Angora fire continues to burn out of control, moving in a northerly direction toward South Lake Tahoe, according to the U.S. Forest Service and the Camino Interagency Command Center.

County Supervisor Norma Santiago, who represents the Tahoe District 5, said El Dorado County has issued a proclamation of emergency which is the first step toward getting a proclamation from the governor. A state proclamation would get in motion state funding for cleanup from the disaster.

Homes Destroyed: 59

As of 9:10 p.m. firefighters are concerned about South Tahoe High School. Apparently flames are seen near the school, and firefighters are dousing hot spots in the trees around the school, according to witnesses.

As of the Resource Status (Prepared 06/24/2007 18:33) for Plumas,
the only items showing going to Angora are:

Doz 1
Eng 22

but there were some crews etc at the Calpine incident yesterday &
today so they may be going to Tahoe tomorrow, since that is winding down.
I was in Truckee today & on my way home through Sierraville there
were several crew trucks either driving south on 89 or at the
Sierraville Forest station. I would imagine that they are getting
them set to go to Tahoe also. 2 of the crew trucks parked there were
from Klamath NF.

As of the updated 209 (2300 hrs): Fire is 1800 acres @% contained. Current threat is to over 500 homes. Within the next 12 hours, a high school and an additional 500 structures. Wind driven crown fire with spotting up to 3/4 mile ahead. Burning in heavy timber with large dead and down component. Large amount of snags in area. 165 structures lost plus an additional 75 out building.

Just looked at the National Sit Report on the Angora Fire. It is at 1800 acres 0% contained, 240 structures, and they are being optimistic about the date on containment being the 28th of June. Yeah wished that I was there too this is my first summer not in wildland and it is killing me. My only chance is a local gov strike team and it doesn't look as if that is going to happen.

Hey So is there any way we can get a look at all of the units
involved?
I was on the inci web thing but they dident have a page about the
fire last night around midnight...
I checked Cal Fire but they only told the county...

1800 acres 0% contained, 240 structures, and they are being
optimistic about the date on containment being the 28th of June. Yeah
wished that I was there too this is my first summer not in wildland
and it is killing me. My only chance is a local gov strike team and
it doesn't look as if that is going to happen.

12177. Re: Angora Incident - Frequencies

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-25 18:09:42 UTC
From: Jake H
Topic: 12153 Message: 12177

Some more freqs came up between Helco and Air Attack over the Eldoscan live scanner.

132.125 and 122.925
One of those freqs is a Sacramento air common freq that the Helco is monitoring for news media copters arriving up from Sac for live footage (fun to listen to the media copters interact with Helco or Air Attack)

The other freq was mentioned only as one that is good to monitor. 123.175 is still the active Helicopter victor net for the fire. It is also the contact freq mentioned in the Temporary Flight Restriction for the area.

Jake

Mark, Jake, and all,

The TeamSpeak server is actually rebroadcasting the ElDoScanner feed. Both are quiet right now because the air show has remained grounded due to visibility (which seems to be getting better). 2 helos on station @ Placerville, several more at SLT airport. AA is on the ground also, not quite sure where he ended up.

They're all ready to pounce on it; I think I even heard a rumor that T910 was in Sacto earlier this AM.

I searched far and wide and couldn't find a stream that was any closer unfortunately.

Summary

A Public Meeting is scheduled for Monday June 25, 8:00 p.m. at the South Lake Tahoe Middle School at 2940 Lake Tahoe Blvd.

Currently the Angora Fire is being managed by a Type 2 Incident Management Team. A Type 1 Incident Management Team is scheduled to assume management of the Angora Fire effective 0600 hrs., Tuesday June 26.

Current Fire Behavior has moderated due to favorable weather conditions. Winds are light and temperatures are moderate. Fire activity has decreased. Crews are working on protective lines around subdivisions and mopping up. Helicopters are working the fire today.

Basic Information Incident Type Wildland Fire Cause Under Investigation Date of Origin 06/24/2007 at 1410 hrs. Location West of South Lake Tahoe Incident Commander Kent Swartzlander Current Situation Total Personnel 1,295
Size 2,500
acres Percent Contained 40% Estimated Containment Date 07/01/2007 at hrs. Fuels
Involved

Heavy timber with large dead and down component. Large amount of snags in the fire area.
Fire Behavior

Fire moderated by inversion today with creeping and roll outs.
Significant Events

Voluntary evacuations remain in place for much of the affected fire area.
Outlook Planned Actions

Continue with perimeter control lines, mop up and secure affected subdivisions. Work with the public and communities of South lake Tahoe.
Projected Movement

Projected incident movement/spread during next operational period:

12 hours: Minimal
Growth Potential

High
Terrain Difficulty

High
Containment Target

It is likely that suppression strategies will succeed.
Remarks

Nevada Governor, Jim Gibbons visited the incident today. Rich Hawkins Type 1 IMT will assume command tomorrow, 0600 hrs. The ICP is located at Heavenly Ski Park and is in
Weather Current Wind Conditions 5 mph N Current Temperature 70 degrees Current
Humidity 20

Just in case you guys hadn't heard, the super tanker, the DC-10 suffered some severe damage to the wing or flap today while working the White Fire. Was escorted back to Victorville by two lead planes.....

Where was the White fire? SoCal? We may need that BA tanker. Flaps or wing almost doesn't make sense unless it hit something.
Any details?

Thanks,
Nitrobear

12202. Re: [NorCalFire] Fire in LNU

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-26 04:59:12 UTC
From: Mike Meadows
Topic: 12193 Message: 12202

NB, as the lead planes took off to escort tanker 910 back home, overheard other aircraft in the area of the fire talking about "do you see it". From that I have to assume the plane had a piece of flap or wing fall off while making a drop. I also heard "severe" damage. I'm really worried that the FAA may deem the aircraft and aircraft like it unsuitable for this kind of work. I hope not, we do need this aircraft. Hoping it was just a fluke but you can be sure this plane won't fly for awhile.....Mike

Roger that . The White Fire is in Kern County and is now close to 10,000 acres...This plane drops from altitude so it didn't hit anything unless it was a bird. Perhaps something just came loose.

From: brian hermo
Topic: 12193 Message: 12204

If it is damaged it doesn't have to hit something to recieve damage to it. The amount flow that it dumps is enough to cause damage alone and the flex on the wings. I have heard of other tankers when they do drops that the force is a lot to the aircraft. it will be interesting to hear what it was though.

OK guys, this is confidential so can't tell you all but it appears that tanker 910 encountered severe turbulance over Bison Peak going in for a drop and hit the tops of some trees. The pilot was able to apply power and pull out of it......more to follow tomorrow if anyone is interested...Mike

Yeow!
Tks for the info Mike. Isn't 910 the P3? I would bet the FAA will ground them until they are sure of what happened.
We sure need every one of those birds...
Thanks-

Nitrobear

12209. Re: [NorCalFire] Fire in LNU - DC-10 "incident"

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-26 15:44:11 UTC
From: Harry Marnell
Topic: 12209 Message: 12209

nitrobear@... wrote:
> Yeow!
> Tks for the info Mike. Isn't 910 the P3?

Nope, it's the DC-10. From the CDF news release yesterday afternoon, at
http://www.fire.ca.gov/newsreleases_content/downloads/2007archive/DC10_Release.pdf

DC-10 Air Tanker Makes Emergency Landing
Flight crew lands aircraft safely in Victorville.

Sacramento ? At approximately 5:20 p.m. pacific daylight time while operating on the White Fire in Kern County, the DC-10, Tanker 910, encountered severe turbulence that caused the aircraft to descend and strike the top of several trees. The flight crew was able to apply power and fly out of the turbulence and safely return to their base at Victorville. The aircraft was operating in the area of Bison peak which is south of Tehachapi. There were no injuries to the flight crew or anyone on the ground. The incident is currently under investigation. The investigation will include a complete structural review of the aircraft. It will remain on the ground until the investigation is concluded. A CAL FIRE incident investigation team will be in Victorville tomorrow morning."

And excerpted from the FAA's preliminary data report this morning:
http://www.faa.gov/data_statistics/accident_incident/preliminary_data/media/A_0626_N.txt

IDENTIFICATION
Regis#: 450AX
Make/Model: DC10
Description: DC-10 (KC-10 Extender, KDC-10)
Event Type: Incident
Highest Injury: None
Mid Air: N
Missing: N
Damage: Minor

LOCATION
City: TEHACHAPI State: CA Country: US

DESCRIPTION: AIRCRAFT REPORTED STRUCTURAL DAMAGE TO THE LEFT WING, OTHER CIRCUMSTANCES ARE UNKNOWN

See
http://www.vvdailypress.com/news/fire_1583___article.html/tanker_plane.html

From: Butte County Public Safety Scanner
Topic: 12193 Message: 12211

No, 910 is the DC-10.

Yeow!
Tks for the info Mike. Isn't 910 the P3? I would bet the FAA will ground them until they are sure of what happened.
We sure need every one of those birds...
Thanks-

Nitrobear

Subject: Re: [NorCalFire] Fire in LNU

NB, as the lead planes took off to escort tanker 910 back home, overheard other aircraft in the area of the fire talking about "do you see it". From that I have to assume the plane had a piece of flap or wing fall off while making a drop. I also heard "severe" damage.
I'm really worried that the FAA may deem the aircraft and aircraft like it unsuitable for this kind of work. I hope not, we do need this aircraft.
Hoping it was just a fluke but you can be sure this plane won't fly for awhile.....Mike

nitrobear@comcast. <mailto:nitrobear%40comcast.net> net wrote: Where was the White fire? SoCal? We may need that BA tanker. Flaps or wing almost doesn't make sense unless it hit something.
Any details?

Thanks,

12212. RE: [NorCalFire] Fire in LNU

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-26 16:29:18 UTC
From: Mike Meadows
Topic: 12193 Message: 12212

this is what I have so far.....

At approximately 5:20 p.m. pacific daylight time while operating on the White Fire in Kern County, the DC-10, Tanker 910, encountered severe turbulence that caused the aircraft to descend and strike the top of several trees. The flight crew was able to apply power and fly out of the turbulence and safely return to their base at Victorville. The aircraft was operating in the area of Bison peak which is south of Tehachapi. There were no injuries to the flight crew or anyone on the ground. The incident is currently under investigation. The investigation will include a complete structural review of the aircraft. It will remain on the ground until the investigation is concluded. A CAL FIRE incident investigation team will be in Victorville tomorrow morning.

Yeow!
Tks for the info Mike. Isn't 910 the P3? I would bet the FAA will ground
them until they are sure of what happened.
We sure need every one of those birds...
Thanks-

Nitrobear

Subject: Re: [NorCalFire] Fire in LNU

NB, as the lead planes took off to escort tanker 910 back home, overheard
other aircraft in the area of the fire talking about "do you see it". From

that I have to assume the plane had a piece of flap or wing fall off while making a drop. I also heard "severe" damage.
I'm really worried that the FAA may deem the aircraft and aircraft like it unsuitable for this kind of work. I hope not, we do need this aircraft.
Hoping it was just a fluke but you can be sure this plane won't fly for awhile.....Mike

nitrobear@comcast. <mailto:nitrobear%40comcast.net> net wrote: Where was the White fire? SoCal? We may need that BA tanker. Flaps or wing almost doesn't make sense unless it hit something.
Any details?

Thanks,
Nitrobear

Subject: Re: [NorCalFire] Fire in LNU

Just in case you guys hadn't heard, the super tanker, the DC-10 suffered some severe damage to the wing or flap today while working the White Fire. Was escorted back to Victorville by two lead planes.....

From: sandrserve1
Topic: 12213 Message: 12213

For those of you interested in compiling a list of USFS Air Tactics freqs, here is the one being used up in Tahoe, yesterday and today.

171.1375 Narrowband

Also using a victor of 123.175 (CDF North Ops Airbases), helos have been using 122.925. Jake and others already chimed in with these.

AA this morning (1135) saying he can't see anything. Maybe another morning of poor visibility. The winds are starting to pick up a bit here in the west end of the county, so maybe later it'll blow some of the smoke outta the way.

12214. CAL FIRE DC-10 Air Tanker Makes Emergency Landing

CAL FIRE DC-10 Air Tanker Makes Emergency Landing
Flight crew lands aircraft safely in Victorville
By: California Department of Forestry and Fire Protection
Published: Jun 25, 2007 at 21:30
Email this article

Printer friendly page

At approximately 5:20 p.m. pacific daylight time while operating on the White Fire in Kern County, the DC-10, Tanker 910, encountered severe turbulence that caused the aircraft to descend and strike the top of several trees. The flight crew was able to apply power and fly out of the turbulence and safely return to their base at Victorville.

The aircraft was operating in the area of Bison peak which is south of Tehachapi. There were no injuries to the flight crew or anyone on the ground. The incident is currently under investigation.

The investigation will include a complete structural review of the aircraft. It will remain on the ground until the investigation is concluded. A CAL FIRE incident investigation team will be in Victorville tomorrow morning.

No, it's not good news at all.
Sac area radio reporting the fire has jumped containment lines and is
running towards structures.

12224. Angora Fire Jumps Fire Line; More Evacuations Ordered

Angora fire jumps fire line; more evacuations ordered By Ryan Lillis and Dorothy Korber - Bee Staff Writers
Published 12:00 am PDT Tuesday, June 26, 2007

SOUTH LAKE TAHOE - In a fast breaking development shortly before 3 p.m., the Angora fire jumped its northern perimeter as the wind picked up and a massive plume of smoke filled the sky. Residents of Tallac village were being evacuated, fire officials said.

Just an hour before, at a press briefing, fire officials were confidently predicting that the fire would be contained by Sunday.

As of 6 a.m. Tuesday, the cost of fighting the Angora fire reached $1.5 million and is expected to mount to $30 million before it's finished, officials said during the press briefing Tuesday afternoon.

So far, there has been just one minor injury in the conflagration that began Sunday and has burned 2,730 acres, destroying 200 homes and 75 other structures in its path.

The cause of the fire remains under investigation, though it is believed to be of human origin since there were no lightning strikes in the area Sunday afternoon.

With controlled burns, authorities expect the final total to be in the ballpark of 3,000 acres burned - as long as firefighters can hold the line now that winds have picked up.

Capt. Chuck Dickson, a spokesman for the multi-agency firefighting effort, said fire crews are working hard to create "defensible spaces" around homes that have not been damaged. They are removing pine needles and trimming trees, in case the wind really picks up and the smoldering fire reignites.

"We want to get people back in as soon as we can," Dickson said. He advised people to call an information phone line set up to provide residents with re-entry information: (530) 621-5866.

An army of 1,700 firefighters is on the scene.

He said there is cautious optimism that the four-square-mile fire will be fully contained by Sunday - which is especially good news for owners of 800 structures still under threat.

The weather situation is the bad news.

The National Weather Service is calling for increasing wind and critically low humidity through the rest of the week. Temperatures are remaining blessedly low, with highs in the mid-70s.

"We have a weather system coming toward the coast - no rain or lightning, but it will bring an increase in wind," said meteorologist Mike Smith. "Currently, for the Angora fire area, we're expecting southwest winds during the day Wednesday from 10-20 miles per hour, with gusts up to 30- and 40-mile per hour gusts on the ridge tops."

He said the gusty winds are expected to become more widespread and slightly stronger Thursday and Friday.

On Sunday, when the Angora fire started and spread, gusts hit 30 miles an hour.

Tahoe Blaze Jumps Fireline *More Evacuations Under Way, Officials Say*

POSTED: 5:59 am PDT June 26, 2007
UPDATED: 4:11 pm PDT June 26, 2007

*MEYERS, Calif. -- *A fresh plume of black smoke billowed over Lake Tahoe Tuesday and a new round of evacuations began as firefighters suffered a setback in their efforts to tame a raging wildfire that had already destroyed some 200 homes near the scenic alpine lake.

Firefighters were working to protect the Tallac Village development outside South Lake Tahoe when the blaze jumped their fireline, prompting the evacuation of the entire subdivision. It was unclear how many homes were subject to the order.

Winds picked up at about 2:30 p.m., with gusts nearing 20 mph.

At about 4 p.m., officials called for the evacuation of the nearby Tahoe Keys Resort on the shore of Lake Tahoe.

"It's a fairly populated area," said Tim Evans, a spokesman for the U.S. Forest Service. "That certainly is not good news for our firefighting efforts here."

Authorities said the danger to homes had diminished overnight as dying winds gave firefighters a badly needed leg up on the inferno. But it was still burning throughout the day along rugged, uninhabited slopes and authorities cautioned that strong winds forecast to arrive in the area could fan the flames. A gusty breeze began to kick up Tuesday afternoon.

"We were concerned about the wind coming up in this area," Evans said. "It's windy up here. It's very dry here. When you have wind and dry fuel you get columns like what we see now."

The flare-up is about three miles from where the fire started Sunday near the south end of Lake Tahoe. By Tuesday afternoon, the blaze had consumed more than 2,700 acres and was about 40 percent contained, fire officials said. Only one minor injury has been reported.

Investigators have isolated the fire's point of origin, near the popular Seneca Pond recreation area, and they were close to identifying its cause, U.S. Forest Service spokeswoman Beth Brady said.

"We have clues to the cause that make us pretty confident that we know what happened," she said.

Authorities have said they believe the fire was caused by human activity, but there was no indication it was set intentionally.

"Human cause doesn't necessarily mean arson," Brady said.

At the source, investigators covered in soot cordoned off an area with yellow police tape and crouched at the base of a rock collecting dirt samples. The forest here was so dry, Brady said, that a discarded cigarette butt or match easily could have ignited the fire. The area also was dotted with the remnants of illegal campfires, she said.

Many homeowners got their first look Tuesday at the destruction wrought by the still-raging wildfire, with some discovering scenes of total devastation and others counting their blessings over smoke-filled homes blanketed with ash.

In the most heavily damaged neighborhoods, firefighters were still mopping up smoldering debris around houses where pockets of live flame lingered. Smoke hung thick over charred piles of rubble that were once homes to nurses, firefighters, policemen and teachers.

"I didn't save hardly anything in the house," said retired firefighter John Hartzell, whose home of 20 years was incinerated by the wildfire. Along with his wife, adult son and a daughter, he sorted through the charred rubble in search of any mementos that might have survived.

"I got out with the clothes on my back, my fire coat and my helmet," he said.

Elsewhere, an opulent contemporary log home stood nearly untouched, even though all the sod in the yard had burned.

"It picks and chooses," said Lynn Cisl, whose home along the edge of the most damaged area also survived. "It's sort of like a disease. It's devastating."

Nevada Gov. Jim Gibbons, who toured the area Monday, said fire officials estimated the cost of fighting the blaze at $35 million to $50 million, and the overall damage at more than $100 million. But with outdoor recreation dominating the region's economy and Lake Tahoe's famed clarity sure to be diminished by fallen ash and embers, the overall economic impact was expected to be much greater, authorities said.

Concerned about looting, dozens of sheriff's deputies and California Highway Patrol officers roamed the burned neighborhoods of Meyers, a few miles south of the lake, ensuring that only those who lived in the area were allowed in.

Cars lined up at an elaborate checkpoint where their windows were marked with white shoe polish to designate the street number of the home where it was headed.

"It was eerie and awkward. You could see the expressions on everyone's face," said Lindsey Douglass, 22, after she made her way through the line of more than 30 waiting cars.

Beyond the checkpoint, neatly manicured driveways led to metal garage doors still standing like gates to nowhere amid the skeletons of burned-out homes.

Hartzell's sister-in-law, Ruth Orozco, a nurse, also lost her home but was able to escape with her two dogs and one cat.

"I can't believe it's all gone," she said, breaking into tears.

Of about a dozen homes on his street, Neal Cohn's was one of just two that was spared from the flames. He attributed its survival to the fact that he regularly removed fallen pine needles from his property, a practice that is banned and subject to fines by the regional planning agency, which says their removal exposes bare soil and causes erosion, a prime culprit in Lake Tahoe's declining clarity.

"You can see the fire line behind my house where the pine needles stopped," he said, "and the neighbors didn't do it."

Others who lost their homes or sustained serious damage were told that concerns about downed power lines and other hazards would delay their return until later this week.

Residents who were spared a total loss said they felt fortunate under the circumstances.

"We still have a home," said Kim Garon, 42, who evacuated when she saw the blaze approaching her house Sunday and came back to find it filled with the thick smell of smoke but having escaped the fire's random hopscotch. "We're doing great."

Key Information:

Disaster Assistance Center:

Victims of the fire can go to a disaster assistance center in South Lake Tahoe. The center, which is open from 10 a.m. to 7 p.m., is located at Lake Tahoe Community College at 1 College Drive. It will be open for the next two weeks.

Community Meeting:

A meeting for anyone who lost anything in the fire will take place at 7 p.m. Thursday at Lake Tahoe Community College.

Food And Clothing:

The American Red Cross is offering clothing and food at the El Dorado County Jail, located at 1051 Al Tahoe Blvd., and is accepting donations there as well.

Status Reports:

The American Red Cross is offering homeowners updated status reports on their homes in the areas destroyed by fire. Homeowners may also call 530-543-2694 for status on their homes.

Where Some Serious Damage Occurred

Homes Destroyed:

Forest Mountain Drive in South Lake Tahoe
Granite Mountain Circle in South Lake Tahoe
Iron Mountain Circle in South Lake Tahoe
Lake Tahoe Boulevard in South Lake Tahoe
Lookout Point Circle in South Lake Tahoe
Mountain Pass Lane in South Lake Tahoe
Cliff Road in South Lake Tahoe
Cone Road in South Lake Tahoe

Some Homes Destroyed Or Damaged:

Aberdeen Circle in South Lake Tahoe
Angora Creek Drive in South Lake Tahoe
Boulder Mountain Drive in South Lake Tahoe
Brush Road in South Lake Tahoe
Cayuga Street in South Lake Tahoe
Clear View Drive in South Lake Tahoe
Mount Rainier Drive in South Lake Tahoe
Snow Mountain Drive in South Lake Tahoe

Some Streets Where Homes Are OK:

Uplands Way in South Lake Tahoe
Glenmore Way in South Lake Tahoe
Highland Drive in South Lake Tahoe

For a list of homes destroyed in the fire, go to
www.co.el-dorado.ca.us/sheriff/fire_damage.pdf.

Road Closures:

The California Department of Transportation announced the following road closures in the area near the fire:

- Highway 50 is shut down to through traffic between Sly Park and the California-Nevada state line, but locals are being allowed through. Mormon Emigrant Trail is open between Highway 50 and Highway 88.
- Highway 89 is closed between Picketts Junction and Bliss State Park.

For more road information, go to www.dot.ca.gov/cgi-bin/roads.cgi.

Lodging For Evacuees

The following hotels are offering rooms at no charge to evacuated residents:

From: Pamela Alley
Topic: 12234 Message: 12234

Didn't catch the IC or tac, sorry...

Modified response. Pike County lookout can see moderate to rapid build on the column as it comes up over the ridgeline.

Slight south wind on it, moderate build at 1640 hrs. Small amt grey in the white smoke now.

LaPorte IC

per AirTac; 2 acres with structure threat at base and side of the fire; moderate spread in light fuels.
1636 hrs

The tac is Tac 12....

Additional engines were requested a few minutes ago, and there's a water tender all-call.

Nothing more unless changes dramatically.

Five firefighters were in a burn-over and had to deploy shelters and are now at Barton Memorial Hospital being treated for smoke inhalation. That hospital is itself facing evacuation now.

A KCRA-TV report had the wind almost still so that is not surprising.
Tomorrow will sure be no barrel of giggles given the weather forecast.

Hey my home town...
It is not in the Alpine county but El dorado county near hiway 89 and 50.
The fire jumped the containment lines about 3 pm today. The incident
comand is located at Heavenly Valley Ski area and the resource area for
residents is located at the Junior College.
Try looking at www.inciweb.gov. They are pretty current.. Although the
guys at KBHR are pretty up on it. :)

I saw a USFS fire boss interviewed talking about this event. He said that the five FFers had a meadow nearby to which they deployed their shelters. I didn't get the whole trail but he said someone went to the meadow after the blow over passed and "knocked on the tent doors and led them out of the meadow". He was a little tounge in cheek about it..big, strapping dude with a been there, done that sort of attitude. He was a great interview and claimed to have come up through the ranks and was from SOCAL and had seen lots of action. A meadow is a nice thing to have close by if things turn wrong...

Five firefighters were in a burn-over and had to deploy shelters and are now
at Barton Memorial Hospital being treated for smoke inhalation. That
hospital is itself facing evacuation now.

Well it was a very nice press confrence,
i just couldent imagian being in that shelter for 25 minutes, twhile
you are hearing all the crikle and crakle around you, and having all
the heat, Wow, i guess i get to expierence it next year...

From: Andrew Witham
Topic: 12220 Message: 12251

With the issue of the new style shelters this year, a key part of the training was "remain in the shelter until advised safe to come out". We were made to stay inside for 15 minutes in training - and told it could be 45 minutes in "real life".

12254. CAL FIRE incident info now on RSS

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-27 18:24:05 UTC
From: Harry Marnell
Topic: 12254 Message: 12254

The CAL FIRE (CDF) incident information is available in RSS format,
which can be seen all in one place on a "RSS Reader" such as
http://www.google.com/reader/view/

Very handy, as you don't have to bring up all the individual websites,
it will fetch them for you.

You get a display like this, which you can click on to get the
details:
http://harrymarnell.com/CAL_FIRE_RSS.jpg

Groups that have "open" message archives (where you don't have to be a
member to view them) such as SoCalFire but *not* NorCalFire or
CenCalFire at the moment, and all of LAFD's news and message services,
can be added to your RSS page by simply clicking on the orange icon
that appears in the left corner of the Address bar:
http://harrymarnell.com/RSSicon.jpg

Inciweb seems to be down this morning, so I don't know if they are
available in RSS or not

See CAL FIRE's RSS info page for the quick/easy instructions at
http://cdfdata.fire.ca.gov/incidents/incidents_rss

Harry

12255. Re: CAL FIRE incident info now on RSS

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-27 18:35:32 UTC
From: Harry Marnell
Topic: 12254 Message: 12255

D'uh, that would be the RIGHT corner of the address bar, wouldn't it.
Many other sites, such as news headlines, are available on RSS, and
the ones you "subscribe" to all show up on one page, sorted just about
however you choose, depending on the Reader you use.

Harry

Embarrassing myself by ID'ing as Harry Marnell, I wrote:

12256. BuTel "Easy Stream" anyone?

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-27 20:33:44 UTC
From: David Coursey
Topic: 12256 Message: 12256

The Dutch firm, BuTel, offers a product called ³Easy Stream² for streaming scanner audio without using any of the existing server services (you host it yourself). The benefit is the free client displays a channel description text whenever audio is received, so the user knows what s/he is hearing. Anyone have thoughts/experience with this? (http://www.butel.nl/)

73,

David

I see Inciweb is back up.
I am wondering why there has not been an update to the perimeter map they are showing for Angora.
Both Inciweb & CDF (whoops, Cal Fire) are still showing maps issued at 1 PM Mon.
Anyone know of any other maps for Angora?

Sure hope they can hold the line at hiway 89 on this one with the winds that are coming this afternoon & for the next 3 days.

Thanks, good map for "public consumption" as you put it, but it does
show quite a bit of the area & where things are.

12265. RE: [NorCalFire] BuTel "Easy Stream" anyone?

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-28 07:27:06 UTC
From: Butte County Public Safety Scanner
Topic: 12256 Message: 12265

Well, I have to wonder why anyone would pay for something they can get for free. Both WME and ShoutCast are completely free on the server side. On the client side, WME uses a client that is installed on every Windows machine and ShoutCast uses a client (iTunes) that is on every Macintosh. WMP can also listen to ShoutCast streams so you have most of the listeners covered. With both WME and SC, all you need is an alpha tag generator (also free) and you have alpha tags. All without the user having to download a client and you don□t have to pay for anything unless you use a professional hosting service for the distribution side.

Anyone?

Subject: [NorCalFire] BuTel "Easy Stream" anyone?

The Dutch firm, BuTel, offers a product called ³Easy Stream² for streaming scanner audio without using any of the existing server services (you host it yourself). The benefit is the free client displays a channel description text whenever audio is received, so the user knows what s/he is hearing. Anyone have thoughts/experience with this? (http://www.butel. <http://www.butel.nl/> nl/)

73,

David

Will these display an alpha tag for the channel every time the scanner stops on a frequency? I think the benefit here is the user knows what channel they are listening to whenever the scanner stops on a frequency.

The short answer is yes. There are a few different ways to bring scanner channel info to your listeners.

However, this is probably not the proper forum for this discussion. You may want to log onto radioreference.com. They have a forum there titled, "Streaming Scanners and Radio Online".

12269. Angora 0700 update

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-06-28 16:41:03 UTC
From: nitrobear@comcast.net
Topic: 12269 Message: 12269

Here are the latest data on the Angora fire. Looks like they are holding their own with the small army of troops that are on scene now.
Political firestorm brewing in the media with the rules about who says what you can clear on your property. This will be interesting and will impact the entire Sierra I bet.

Angora Fire
Angora Fire Incident Information:
Last Updated: June 28, 2007 7:00 am
Date/Time Started: June 24, 2007 2:10 pm
Administrative Unit:Lake Tahoe Basin Management Unit
County:El Dorado County
Location:West of South Lake Tahoe
Acres Burned: 3,100 acres; Full containment expected on July 3, 2007.
Containment55% contained - 3,100 acres
West of South Lake Tahoe.
Control:Full control expected on July 3, 2007 at 6:00 pm
Structures Destroyed:229 residence and 75 commercial structures have been destroyed
26 residence have been damaged
Threatened: 800 homes, 275 commercial properties and 180 outbuildings.
Evacuations: Mandatory evacuations remains in effect for portions of South Lake Tahoe.
Injuries: 3
Cause: Under Investigation
Cooperating Agencies: All fire agencies within the Tahoe Basin, USFS, CAL FIRE, CHP, South Lake Tahoe Police Department, El Dorado County Sheriffs Office, Red Cross, Civil Air Patrol.
Total Fire Personnel: 2,174 (587 CAL FIRE)
Fire crews: 35 (22 CAL FIRE)
Engines: 164 (31 CAL FIRE)
Helicopters: 21 (1 CAL FIRE)
Dozers: 4 (1 CAL FIRE)
Water tenders: 15
Costs to date: $5.7 million
Major Incident Command Team: Unified Command
Conditions: The fire is burning in heavy timber and rugged terrain.
A wind event is expected to develop over the next couple of days potentially bringing gusts to 30-40 mph. A Red Flag Alert will be in effect for the next operational period due to the wind and extreme fuel moistures.
A road closure for Highway 89 at the Highway 50 junction is expected to take effect at 10:00 am this morning. Utility services remain interrupted throughout the majority of the communities impacted by the fire.
Phone Numbers (530) 543-2694 (Angora Fire Information)

Not sure what is wrong, but the link you provided, "wildfire" is not
coming up, all I get is:

The webpage cannot be found

HTTP 404

Most likely causes:

* There might be a typing error in the address.
* If you clicked on a link, it may be out of date.
I presume you did copy/paste so I am wondering if there is more to
the link than showed up.

At 07:58 AM 6/28/2007 -0700, you wrote:

That might have been a temporary URL, as it's no longer working for me either. It's identical to the pdf map to which I posted the link http://harrymarnell.com/Angora-0628.pdf

but in portable network graphics format.

You can go into http://geomac.usgs.gov/ >> Wildfire Mapping >> Jump to Wildfire >> ANGORA, CA and drill down to it. As of now (1140 PDT) it hasn't been updated since earlier this morning

Every Angora Fire map available on the net here, at CAL FIRE NEWS
<http://calfire.blogspot.com> including the ICP maps, those .PDF maps
are huge files that may of been the problem?
This map
<http://calfire.blogspot.com/2007/06/inciweb-062607-2200hrs-angora-fire.\
html> released by InciWeb is the first high resoloution working
perimeter map I have ever seen them release, I think it's news on it
own merit, Can they trust the public with real Intel and Info?.

For those of us getting off work in Tehama and Shasta, this is the fire that is putting a LOT of smoke in the Red Bluff, Cottonwood, Anderson and Redding area. Nice, sweet grass-smelling veggie smoke. I perked up real fast leaving the office today wondering if kids had set the creek ablaze next to my office.

These winds aren't friendly for grass fires in rolling hills.

Summary

*Note: Lake Tahoe Basin Management Unit entered into Fire Restrictions on
June 24. Campfires, including charcoal bbqs, are prohibited except in
Developed Recreation Sites.*

- The County Sheriff has established an Evacuation Re-Entry hot line
with information at (530) 573-7966

- For current evacuation and re-entry information visit "
http://cityofslt.us"

- For preliminary list of lost or damaged structures visit "
http://www.edso.org"

Basic Information Incident Type Wildland Fire Cause Under
Investigation Date
of Origin 06/24/2007 at 1410 hrs. Location West of South Lake Tahoe Incident
Commander Rich Hawkins Current Situation Total Personnel 2,174 Size 3,100
acres Percent Contained 55% Estimated Containment Date 07/03/2007 at
hrs. Fuels
Involved

Heavy Timber with large dead and down component
Fire Behavior

Light fire activity observed in all Divisions.
Significant Events

Good progress was made during the last operational period with mop-up
extending 200-300 feet in depth. Crews continued to patrol the fire line and
monitor any safety risks. Evacuations remained in effect in portions of the
South Lake Tahoe community.
Outlook Planned Actions

Continue perimeter control operations to threatened communities. Line
improvement, mop-up and patrol will continue on all Divisions. Damage
assessment Teams will continue field assessments. Utility Crews will

continue to restore critical utility infrastructure.
Projected Movement

Projected incident movement/spread during next operational period:

12 hours: No forward spread is expected

24 hours: Spread possible due to high winds.

48 hours: Spread possible due to high winds.

72 hours: Spread possible due to high winds.
Growth Potential

High
Terrain Difficulty

High
Containment Target

07/03/07
Remarks

Increase to structures destroyed due to the Damage Assessment Teams developing a more accurate assessment. Structure loss estimated in the amount of $141,000,000. On going assessment will continue in the field. The Angora Fire remains in Unified Command.
Weather Current Wind Conditions 15-20 mph S Current Temperature 76 degrees Current Humidity 18-19 %

A lot of activity in the North State.

SHU has two veg fires going, the Creek Incident has already
request 3 additional AT's and 1 copter. The Knoll indicent
appears to be over at about 4 acres and 2 outbuildings.

BTU also has a couple of incidents ongoing so resources
are beginning to get thin.

From: Pamela Alley
Topic: 12293 Message: 12298

It's about 4+ from Tahoe back to Redding depending on which way they go.

The Stony Oak blvd incident was actually behind a Swedes Flat residence; appx quarter acre with shaky containment by locals (yay locals, the wind is just a-hellin' up there); all but 2 engines cancelled.

The Cana incident, I believe, is the one which was reported by the railroad tracks and is apparently extinguished.

Stump IC is down in Southside Oroville, which burns on an annual basis (rolling eyes). Welcome to summer!

Date: 2007-07-01 07:49:10 UTC
From: Kim Noyes
Topic: 12318 Message: 12318

Officials: Tahoe fire caused by campfire Wildfire 80% contained; all evacuation orders to be lifted. BY STAFF REPORT |SOUTH LAKE TAHOE, Calif. | June 30, 2007

With winds continuing to moderate, firefighters brought the wildfire burning near South Lake Tahoe to 80 percent containment Friday night. Officials also announced the cause of the fire was an illegal campfire.

The fire was held steady after burning 3,100 acres since it erupted Sunday afternoon. The blaze has destroyed 254 homes in the popular resort area.

Full containment was still predicted for Tuesday, one day before the Fourth of July holiday and a planned massive fireworks display in the community that typically attracts 100,000 visitors.

Forest Service officials said they did not know who was responsible for setting the campfire. They said it was not believed to have been set to spark the wildfire.

With firefighters continuing to make progress on the fire lines, some residents were allowed to return to their burned out neighborhoods. All evacuation orders were to be lifted at 8 a.m. Saturday, the El Dorado County Sheriff's Office announced. About 3,500 residents were forced to evacuate during the past six days.

More than 2,100 firefighters had battled the blaze. Three injuries were reported.

Several local churches and at least one faith-based organization - Baptist Men's Ministries for the California convention - have announced plans to help the community recover. Local businesses and individuals also were planning to assist residents affected by the fire.

12319. File - NCFposting.txt

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-01 10:50:55 UTC
From: norcalfire@yahoogroups.com
Topic: 12013 Message: 12319

How and what to post on NorCalFire.

1. Northern California Fire Radio

Any and all questions regarding how to monitor fire radio are welcome on NorCalFire. This may include how certain agencies work, their frequencies, methods of operation, and any other info to better our listening hobby. This list is also used for incident information for fires in Northern California.

2. Common Sense:

We know it's a fire. We know it's a new fire. So don't post New Fire or New Start in the subject line. By the 2nd message about the fire, it isn't new anymore. We'll see a new fire started by seeing a post with a new subject line. This is a pet peeve of mine, and many others. Expect it enforced.

3. Subject Lines:

Get at least the following: County or Jurisdiction, general location, incident name.
Example subject lines that please everybody include:
Butte - Honey Run Canyon
SHF Bolli Incident
Timber Fire, Lassen USFS Turner Mtn
Calavaras - Alpine Lake fire?

4. No one-liners, or one-acres, or thank-yous, or you're-welcomes.

This goes for the "play-by-play" posters. Please combine the information that you've gathered into a larger post. If you're posting sooner than every 15-30 minutes about a fire, you're posting too much. Wait for a size-up of the fire before posting. If it sounds like a large incident with lots of radio monitoring potential, then post it.

No Strike Team deployments, unless they're going to a Northern California fire that isn't posted on the list yet.

Don't send thank you's (or if one gets through, don't send you're welcomes back") to the list. If a large fire got covered nicely on the list, and it is quiet on the list, and you were directly affected by the posts regarding that fire, you may thank the list or the particular people. If this is abused, you will be asked to stop. This just adds to an already busy list.

5. Replying

Read all messages before replying. You might be replying to a question that got answered ten times already. Also use one message to reply to all items for any particular topic.\

6. Acronyms
Learn them. Do not complain about them. Too many people on the list use these acronyms in

their daily lives. They do not need to stop when posting to this list. It is expected of you to learn these acronyms if you want to enjoy fire radio of any degree. Acronyms are readily available on the Internet. There is a link to acronyms etc. at the bottom of every post. Use it.
http://fire.norcalscan.org/glossary.html

12320. File - NCFrules.txt

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-01 10:50:55 UTC
From: norcalfire@yahoogroups.com
Topic: 12014 Message: 12320

Thanks for joining NorCalFire! If we all follow these rules, the list will run nice and smooth. If you don't follow these rules, refer to rule #6

1. No whining or complaining.

There is zero tolerance for whining and complaining on NorCalFire. You will be moderated fast and if you continue, you will be removed from the list. There is no room on the list for your personal problems. That is what direct email is for. If you have a problem with someone on the group, try emailing norcalfire-owner@yahoogroups.com for help.

Do not whine about acronyms. Learn them or look them up. Print them and put them next to your screen. Too many people on these lists use these acronyms in their daily lives and will not bow down to your lack of appreciating the hobby. If you want to enjoy fire radio, learn how to listen to fire radio. We will NOT hold your hand.

http://fire.norcalscan.org/glossary.html

2. Keep it on topic.

Northern California Fire Radio. If it doesn't involve THREE of those FOUR words, do NOT post your message. We are not here to learn about what radios you have to sell, or how to turn on your scanner.

3. No one-liners, or one-acres, or thank-yous, or you're-welcomes.

This goes for the "play-by-play" posters. Please combine the information that you've gathered into a larger post. If you're posting sooner than every 15-30 minutes about a fire, you're posting too much. Wait for a size-up of the fire before posting. If it sounds like a large incident with lots of radio monitoring potential, then post it.

No Strike Team deployments, unless they're going to a Northern California fire that isn't posted on the list yet.

Don't send thank you's (or if one gets through, don't send you're welcomes back") to the list. If a large fire got covered nicely on the list, and it is quiet on the list, and you were directly affected by the posts regarding that fire, you may thank the list or the particular people. If this is abused, you will be asked to stop. This just adds to an already busy list.

4. Sphere of Influence.
So the fire is 200 miles from you? Don't worry about it. We don't need to know if your second cousin's best friend's sister lives 10 miles away and you want every little detail about the fire. The person who posted about the fire will post more info as they see fit. If you know of immediate family in the area, you may ask the poster privately, using their direct email. Don't use the list please. You will be moderated if this is abused.

Choose your home and stay put. If you live in Fresno and have a keen interest in Butte County fires, then move to Butte County. Do not live vicariously through the list and ask

every little detail about incidents in Butte County. Etc. Etc. Etc.

5. Replying

Read all messages before replying. You might be replying to a question that got answered ten times already. Also use one message to reply to all items for any particular topic.

6. Moderation

New members are automatically placed on moderation. This is mainly to stop the spam that has become pervasive on the system. It's also so that we (the moderators) know that you're okay, and not some kind of wierdo. You'll come off moderation when we feel that it's okay to turn you loose to the list.

Once off your initial moderation, you generally have to screw up really bad to be put back on moderation. One of the things that we will not tolerate is incivility. We are all adults here, and those of you between 13 and 18 should have enough maturity to act like an adult. We can disagree without being disagreeable. If you've been placed on moderation, you'll be taken off when the moderators think you can be trusted again. If you keep being put in moderation, we may ask that you leave so our time is not wasted in holding your hand and babysitting you.

7. Have fun!

This list is for getting the information about fires in NorCal out, so we all know what's going on. The news media isn't very much help in getting the specifics out, and you can listen to the incidents as they unfold.

If you have any questions, complaints, or suggestions, email them to norcalfire-owner@yahoogroups.com and we will try to get to them as soon as possible.

Jake, List Owner

12321. TGU fires

Yahoo group: norcalfire (2005 — 2016)

From: Steve Jackson
Topic: 12321 Message: 12321

Early start to the day, two fires already. One south of Red Bluff
and one in Manton. Both are being picked up pretty easily.

Of Note: ST9233C has been trying to depart TGU since yesterday,
but everytime they form up to leave there is a fire. Maybe they
will make it out today and return to NEU.

Getting reports from CHP CAD and other boards about a working fire near Placerville/Coloma in area of Hwy 49 and Hwy 193.

No size ups, but one report from another board says large column showing and numerous reports to CHP CAD from all sorts of address in the area.

Others may know more.

Yeah, so far no actual CHP units ASSIGNED, hence no incident that remains, but, if you do a quick search on "fire" you ll see lots of calls show up and then go away as people call 911 and get the CHP dispatch center via their cell phones.

1733 HRS

12333. Bayne Incident - El Dorado County. 1845

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-02 01:48:26 UTC
From: George.Cusack@alldata.com
Topic: 12333 Message: 12333

This is the incident near Coloma. The fire is between Bayne and Mt. Murphy Roads. Radio traffic indicates that Cal Fire is getting a handle on it.
I have heard a few engines reporting in to Camino that they have been released. Air Attack has released the Grass Valley tankers, after other tankers were diverted by North Ops.
Staging just reported they are shutting down.
No further.

Date: 2007-07-02 03:49:21 UTC
From: Kevin
Topic: 12335 Message: 12335

Yesterday about noon a Union Pacific train jump the tracks in the Feather River Canyon near Storrie. 22 car over the side nearly crushing seveal homes. A few of the cars were tankers with peanut oil seveal were leaking. Two of the tanker cars had denatured alcohal. One leaked it entire load about 30,000 gals, of denatured alcohal. I was down ther on stand by until 11:30 this morning for the Quincy Fire Department. Its a mess up there rail traffic will be down for a while.

12336. SHU- Structure into vegetation

12338. RE: [NorCalFire] SHU- Structure into vegetation Marx Incident

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-02 23:14:18 UTC
From: Andrew Witham
Topic: 12336 Message: 12338

I just left the scene. This was an outbuilding with spread to the vegetation contained at just under an acre. Quick containment prevented this from being a significantly different fire, as it was down slope in the trees that run north of Burney all the way to Hwy 89 and beyond. There was a 20mph warm west wind on the fire. The fire was also close to HT power lines. As I left, Copter 205 was released to return to Bieber, and a new column went up as overhaul started on the building, which was on the ground. The tanker, which was not used but just held in orbit, has also been released back to Redding. Sheriff's officers gave a 'heads up' to all nearby residences but there were no evacuations. For those that know Burney, this was located between the two mills on Hwy299e just west of the town.

I'll try and post a couple of shots when I can get them uploaded somewhere.

Later Saturday evening when a second check of the cars it was discovered that underneath the alcohal car there was a huge gap in it they had to dig a hole to find it because the hole it made when it was leaking collasped on it self. Plant life were it ran down the hill is dying off quickly. A well was also discover and they are worried that it is now comtamitnated.

12344. New Incident - CUMMINGS INCIDENT (SCU)

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-03 22:33:18 UTC
From: Craig Rose
Topic: 12344 Message: 12344

This has been cooking for some time. Approximately 20 acres with spotting and multiple structures threatened near the community of Crockett in Contra Costa County. Location is Interstate 80 and the Cummings Skyway. Fire is bounded by Highway 4 on the east and southeast. My initial information came in at 2:37 pm and there was just a resource request from CAL FIRE Battalion 1616 for the following:

> TWO ADDITIONAL OVERHEAD
> ONE TYPE II HELO W/CREW
> TWO ADDITIONAL CREWS
> TWO ADDITIONAL DOZERS
> FIVE ADDITIONAL ENGINES

MONITIOR

CDF TAC 2 - 151.160
CDF SCU - 151.445

It always happens to me. Break my own rule of posting something 30 seconds after a previous post and it turns out to be nothing. Strike teams and task forces are canceled, tankers are canceled with one on load-hold at Chico.

Thanks PA for the catch. Glad you can hear something out of your "hole" down there...you need a better antenna.

12348. Update: BUTTE: Heritage IC

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-04 22:52:34 UTC
From: Pamela Alley
Topic: 12348 Message: 12348

Ten acres, moderate to rapid rate of spread, multiple structure threat in wildland urban interface.

Requesting additional 5 engines and crew strike team, information officer and law enforcement for potential evacuations.

Area threatened: The Oaks, near Kelly Ridge and Olive Highway.

Riverview is also under threat.

Wish I could go shoot pictures!!

Releasing tankers and training platform as of 1450. One structure fully involved, another partial.

I think they were freaking pretty hard about Kelly Ridge and the Oaks and all that 'lovely' new construction with all that gorgeous, golden, tinder-dry grass! Not too far from the dam and so forth, either. It was moving really quickly there at first, no question about it..uphill, if memory and Google Maps serve me correctly.

I guess one of the drops ripped a large branch out of a tree onto civilians but all are OK except the tree, of course.

Ah well...ten acres or so less to catch on fire tonight with all the fireworks, right?

I need a TALLER antenna but they require all kinds of stuff for that....I'm just proud this one is still up, actually...

12350. Inciweb.org info now on RSS

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-04 23:06:23 UTC
From: Harry Marnell
Topic: 12350 Message: 12350

Federal inciweb.org info is also now available as RSS feeds you can personalize:

* Inciweb CA Incidents: http://inciweb.org/state/5/
* CA Fire Releases/Articles http://www.inciweb.org/feeds/rss/articles/s/5/
* GoogleEarth Map files http://www.inciweb.org/feeds/maps/s/5/ - VERY cool - includes POIs, boundaries, etc. Requires free Google Earth http://earth.google.com

Of the Calif fire yahoogroups, only SoCalFire and SoCalFire-discussion are public and thus available in RSS. And LAFD's Alert, News, and Blog sites.

Harry

I don't know where they got '10 acres' from. We flew over it last night on patrol and it was barely an acre or two at most that we saw. One house burned to the ground, the others slightly singed.

Mike

Anybody over in the Mendocino Unit verify if Mendocino's local net is still 151.385? For the past three weeks I am getting response checkbacks and all sorts of normal "local-net" type traffic on 151.445 over here in Tehama and it is very annoying (being a common tactical for the north valley here). That is Command 8 for Mendo, Humboldt, Del Norte and I'm wondering if they changed a procedure where response checkbacks etc. are on the command repeater instead of local net. I didn't think they could use these Command Nets unless it was "really" needed because it wipes out its use as a tactical frequency for quite an area.

And I'd be very interested to learn what mountain peak that repeater is working from to happily cover Mendocino unit and come blasting into TGU.

151.445 is SCU local net. It may be atmospheric bounce. That's when the atmosphere has the right conditions to carry radio waves much farther than normal. Not sure if this is it but it might be?????

Getting reports from other boards that the Plumas Forest got some good lightning activity this afternoon. Rumors of about 10 fires, but the largest apparently is the Wheeler incident. No exact location so far but somewhere near Susanvill and reported as 400-500 acres.

Bunch of resources ordered and BTU apparently supplying a Type 3 Strike team.

All I know right now.

Probably "ducting" which usually occurs when it's hotterthanhell in the valley. Envision a pipe, one end is cooler and the other is hotter and the signals just flow through the pipe. It is a pretty common event in the valley and can even hop valley's. I've heard LA here on the 2 meter amateur band when it's really hot. Not predictable of course, that what make it fun. ;-)

Don't know which of the several fires that are going on there this
was from, but got a lat/long for one of them.
It is E of Taylorsville in what looks like remote area looking on Google Earth.
N 40 09.202 W 120 40.181
Janesville is just E of this location

From: Jake H
Topic: 12361 Message: 12374

Let me rephrase my observations. I'm wondering why I'm hearing Howard Forest, the ECC for Mendocino Unit, talking to 11xx units on 151.445 with response checkbacks, cancellations, and every other type of "local net" traffic other than the actual tone outs. Not at all like any other CDF unit I've listened to. Seeing how 151.445 is Command 8, which is the Command designated for Mendocino, Humboldt and Del Norte counties, I'm simply confused. Everything I understand/stood about CDF radio says they shouldn't be there.

Cahto Peak in Mendo is most likely where I am hearing Command 8 from. I have heard Mendocino local net on Cahto Peak numerous times, as well as Command 1.

Jake

nitrobear@... wrote:
> Probably "ducting" which usually occurs when it's hotterthanhell in the valley. Envision a pipe, one end is cooler and the other is hotter and the signals just flow through the pipe. It is a pretty common event in the valley and can even hop valley's. I've heard LA here on the 2 meter amateur band when it's really hot. Not predictable of course, that what make it fun. ;-)

Yes 151.385 is Howard Forest.

You ask about Command 8 (151.445)... Most likely, it's not MEU traffic you're getting. Command 8, is also known as Tac 11, and is better known for serving the CDF Santa Clara Unit (SCU - MORGAN HILL), so if you're getting "response checkbacks" most likely you're hearing SCU Tone 1 or Tone 3 traffic. Tone 1 (Mt. Diablo) is for mainly Contra Costa County, and Tone 3 (Forgot where the repeater is) is for Western Stanislaus and Western San Joaquin Counties. I know that you're hearing them because I've been up that way and have been able to listen to my home local.

FYI, TGU can be heard here. I hear morning reports and and certain dispatches, so when you refer to atmospheric bounce, I believe ya.

Topic: 12361 Message: 12376

TGU tone 1 is from Turner Mtn, 6900ft on the east side so it is very readable down to Stockton and Bay area. Vice versa, all night last night for 4th of July CZU was irritating the heck out of TGU's repeaters (same freq). SCU units aren't 11xx and their ECC isn't Howard Forest, and 151.385 isn't 15kc from .445 so I know my radios aren't picking up a wider transmission, it's just a mystery that's bugging me now.

You can hear it on my live scanner. When you hear Howard Forest and 11xx units, the scanner is on 151.445. :)

As for ducting, I am suddenly hearing Taylorsville Fire for the first time on 155.085, which is Crew Net for Tehama. :)

That would be the Davis IC.

Also heard reference to Irish Heat IC at 40 09.087 120 39.783...
With Eng 24 manning.

Comms aren't real good from either of these IC's into
the PNF repeaters on 170.550. Am coping traffic
about getting the dozer onto the lowboy to get into place.

Will update more in morning as they start to work these fires.

You are not alone, Jake. SHU Local is a frequent visitor to my living room in Amador when I monitor Tac 2.

If you own an old BC760, you can program it to lock out an output tone on a given repeater frequency. You'll hear everything on that frequency except transmissions with that particular subaudible.

Maybe the newer Bearcats have the same feature?

Looking on the National Sit Report that there is the Antelope Complex which is at about 1250 acres and no containment at this time and mandatory evacuations are in effect. I was off yesterday but the fires are up by Antelope Lake and it had a good fire up there last year as well as in 2001. A lot of Snags in the burned areas. There is Red Flag Warnings in the area for dry lightning and high temperatures. Over here in Chester it is mostly cloudy and the clouds look like they will be building here shortly. It looks like it will be a very busy weekend for everyone up here if the weather reports are correct.

Sick sense of humor? Visit Yahoo! TV's Comedy with an Edge to see what's on, when.

A slight update from the National Sit Report. North Ops page says the Antelope Complex up to 3000 acres now, and there are two other working fires of 50 acres and 25 acres respectively with up to another 15 fires, not all of them staffed at present.

As of 0630 AM.

John

12383. Mulitple fires on the Plumas

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-06 17:20:43 UTC
From: Todd
Topic: 12383 Message: 12383

Haven't had much time to monitor these, but as was reported
last night by a couple of others, there are currently several
fires going on the Plumas. I'm guessing due to lightening
strikes from yesterday - with more thunderstorms predicted
for today.

Current names being used:

Wheeler fire
Long fire
Davis fire
Meadow fire
Creak fire
Slope (?) fire
Babcock fire
Irish Heat fire

And another reported here about an hour ago with no-name assigned yet:
40 09.087 120 39.783

Babcock might have joined with the Wheeler. Irish and Davis fire
reported as holding to "status quo", and no winds reported.

Units heard enroute:

Strike Team 9120C CDF enroute from Janesville grade area.
Strike Team 9220G and 9242G staging in Genesee area.

Quincy currently handling Comms/Control with plans to move
to the Antelope Complex here shortly.

Antelope Air Attack currently awaiting for Air Tankers out
of Chester.

Heard several other units/designators mentioned, but just getting
into this fire monitoring stuff. It's a whole different ballgame!

Won't post any follow-ups unless something else urgent breaks.

Playing with a new Icom IC-PRC2500 that I've recently picked up,
so will be searching for new freqs to report.

If you guys aren't familiar with the Antelope Lake area in Plumas
county, this is some rough terrain. Not much out there.
Going to be another hot one today, too! Ouch!

PNF 170.550 MHZ
PNF Air Tac 170.000 MHZ

PCSO 156.090 MHZ
PCFD 155.085 MHZ

Pam, CALFIRE has a policy of 4 air tankers per fire. A 5th or 6th would require Region Duty Chief approval. You normally have to be the only fire in the region to get more than 5.

SB fire has only 3 CALFIRE air tankers assigned. Using some federal heavies to supplement the S2T'S. Shortage will be helitankers, which many are the SB fire.

Due to several of CALFIRE's air tankers being worked on this morning because of various ailments, both regions will be strict on how many aircraft will be on each fire in the coming days.

Federal agencies do not have this policy; it is strictly a CALFIRE thing.

Let the dance begin. Copter 205 is enroute LMU, this is the second time today. There are several cells in the north state one large one near Tomhead lookout on the Tehema/Trinity border. Some cells in LMU. Others south of Susanville and maybe Plumas.

Tomhead lookout is now reporting a fire near the tower. SHU toning out for it, might just be a tree fire.

Oh I don't doubt what you say there about MEU's repeaters Marty, but when I travel up into Tehama or even Shasta County, I do pick up SCU traffic on 151.445. I've even picked them up from Placerville. So it would leave me to suspect that it's SCU Tone 1 and/or Tone 3 that's being heard. Not that it's coming through the MEU repeaters, but TONE 1 and 3 might be doing atmospheric bouncing. I know that at times I can pick up TGU here in San Jose.

Another thought is that most incidents here in SCU are being moved to Command 1 or Command 2, thus reducing traffic on local net. Perhaps MEU is doing the same for their unit, moving incidents to Command 8, to help reduce traffic on Howard Forest Local Net.

BLM has one but it is only for Federal and state resources. It is very accurate and they don't offer to the public for that reason. Would be terrible if an arsonist gets a hold of it

From: Jeff Allen
Topic: 12404 Message: 12404

Looks like it may get ugly on the Inyo. There are two major fires in this lightning caused complex. Campgrounds in Big Pine and Independance are evacuated. 7000+ acres . Havent heard anything as far as resource requests. I spoke with a buddy who is a CDF crew Captain in Owens Valley. He said there is going to be a structure threat soon. Does anyone have more info? Also trying to find an INF stream for a scanner. Have had zero luck so far.

Luggage? GPS? Comic books?

Troy if you had a Password for the BLM site you can call them at the following:

Wildland Fire Management Information
User Support

If you have questions or comments about the Bureau of Land Management (BLM) Wildland Fire Management Information web site, please contact the Help Desk at the National Interagency Fire Center (NIFC).

Contact:

NIFC Help Desk

Hours:

Monday through Friday, 7:30am to 4:30pm Mountain Time

Phone:

(208) 387-5734

Fax:

(208) 387-5746

E-mail:

NIFC_Help_Desk@...

During times of peak fire activity, if there is a problem with the WFMI Lightning or Weather module that cannot wait until the next business day, contact the phone number above for after-hours support. Passwords will not be reset outside of help desk business hours.

You will have to wait till Monday, but if you are authorized to use it, they are happy to reset it for you.

My scanner quit working a couple of days ago and I haven't had time to get a new one. I live near Grass Valley AAB and today there is MASSIVE air traffic in and out. Thier turnaround time isn't very long, either, so they're dropping somewhere near here. Can't see anything in the sky from my place, and I don't want to bother dispatch to ask where the fire is as they're obviously up to thier a**es already.

Any help here? What's going on out there? AAAGGGGHHH! Will duct tape fix a scanner?

TIA!

Power IC reports fire now 25 acres, has spotted across their dozer line, req additional copter - Copter 902 being dispatched (from Vina?).

BUF & HAT also responding.

Nothing further unless I send something further.

Harry

IC reports now 50-60 acres, light/moderate ROS "except when it hits heavy fuels.., keeps spotting across our lines;" Requesting 4th AT if possible.

This fire is in a red flag area beginning at 14:00 to 22:00
http://harrymarnell.com/sto.jpg

"SCATTERED THUNDERSTORMS ARE EXPECTED TO DEVELOP OVER THE BURNEY BASIN AND WESTERN LASSEN AND PLUMAS FOREST THIS AFTERNOON AND EVENING. INITIALLY...LITTLE TO NO PRECIPITATION IS EXPECTED FOR DRY LIGHTNING THE FIRST FEW HOURS. ALTHOUGH THE MOISTURE PLUME SHOULD MOVE UP NORTH INTO THE AREA THIS EVENING ALLOWING THE STORMS TO BECOME WET. ERRATIC AND GUSTY WINDS UP TO 50 MPH ARE POSSIBLE WITH THE THUNDERSTORMS. WET THUNDERSTORMS ARE EXPECTED OVER THE MOUNTAINS ON WEDNESDAY."

The 9-1-1 Center computer can automatically call out to phones in a specified area and alert them to an ongoing incident:

"Additionally, SHASCOM now has "reverse 9-1-1" capability which enables it to send messages to all telephones within a selected area. Reverse 9-1-1 is used to transmit evacuation orders; warnings of fire, smog or flood dangers; Amber alerts, etc."
http://www.reddingpoa.org/06_grandjury.pdf page 8

³Reverse 911² is a system that uses telco records of where telephone numbers are located to dial people in a specific geographic area and play a warning message when/if they answer their phone. In a system I know, the central office can handle 200-500 calls/minute, 40-60 percent go to voice mail. 20 percent are answered by humans who respond and another 20 percent seem to be answered by humans who don¹t respond (by pressing a Touch Tone button). The system doesn¹t call businesses, so its actual reach is considerably less than you might image. They are best used for non-urgent messages, like school closings for snow days, that can be delivered over a period of hours.

Reverse-911 is set up using a (usually) GIS like system whereby a dispatcher draws a circle or a box or an area around a set of streets or an entire region, records a message and then sets it off. The system looks up all the phone numbers found within the circle, square or area designated by the dispatcher, calls those numbers and plays the pre-recorded message. It's a good tool for notifying the public about disasters, or evacuations or other issues. The better reverse-911 systems will keep track of who answered and got the message, who didn't, how many busy signals, etc.

Mike

Current systems do that□I¹ve seen the reports. Reverse 911 seems like such a great idea, but doesn¹t work quite as well in practice, for a variety of reasons.

Air Attack reporting "40+ acres, dangerous rate of spread up hill, 2 structures threatened, potential for 500 acres."

Sounds like MEU (howard forest) is still primary on this but I imagine MNF forest will become primary, if not at least unified command. MNF is definitely awake now.

I've done ham radio field day from the top of Anthony Peak the past few years. Know the area well. I am very tempted to race up to Anthony tonight but if the fire is heading to the north, this would be suicide. When I get home tonight I'll post pictures of the area.

Hi John. That Hunter fire was a nasty one - I remember that one on the radio.

Just got home and flicked on KRCR, channel 7R in Redding and they have coverage of this incident with some still images. They are reporting that the spread was stopped at Glenburn road with the help of some dozer line and good hard effort.
KRCR is all over this but they have limited resources usually. They do have a reporter on scene in the area but, no copter! ;-(

Date: 2007-07-11 01:43:07 UTC
From: Jake H
Topic: 12451 Message: 12457

Currently the live scanner is programmed as follows:

TGU Local (priority 1)
BTU Local
Butte Support
SHU Local
MEU Local

SHF Forest
MNF Forest
LNF Forest ("Susanville", in lightning plan now)

Calfire Tacs 1, 3, 4, 11, 12

Command 1 (priority 3 for Power IC, scratchy)
Command 2
Command 8 (priority 2 for Pass IC in MEU)
Command 10 ("Bieber Command" for lightning plan)

All air tactics

A few other oddballs

I was swamped today and had little time to listen to the scanners around here but they seemed pretty busy in the background. Seemed like a lot of stuff woke up down around Dobbins, and Rackerby that had lots of assets scrambling.
I talked to an associate this morning from Reno and he said Reno was fogged in with smoke with a bunch of lightening caused fires. He was out in Yerrington when we talked and was pretty happy to be out of the smoke.
Seems like this happens just about every July. More to come next week?

I was up in DOnner/Truckee and I was right in the middle of one big lighting storm, it had triggered a couple little fires that put themselfs out, but i did here TRK fire respond to a couple fires, and a structure response, of a buliding that was hit by lighting and was causing electrical smoke smell....
If this keeps up with the dry stuff in Augest and september, it wont be good.....

Fire break out near Chilcot in Plumaas county at about 2pm today. First report is 30 -40 acres and speading fast. This is north of highway 70 on scott road.

12483. Modoc MDF Fletcher IC

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-17 01:05:11 UTC
From: Jake H
Topic: 12482 Message: 12483

Modoc Forest is working a major fast moving fire called the Fletcher Fire, just west of Goose Lake. It is a narrow wind-driven fire with fast growth to the north. It burned 5 miles to the north in 4 hours. As of 11am Monday it was 2900 acres and expecting extreme fire behavior today with heavy winds and long range spotting. Fire is crowning and torching. With today's weather, it is expected to have burned into Oregon, currently making a complicated communications mess between Modoc USFS, Fremont USFS, CA and OR State Fire, and BLM in Oregon.

CalFire Units in Cascade Region moving lots of resources into the Lassen/Modoc Unit for both immediate response and for coverage. Also at 5pm today I saw a Helitanker flying north (the only one in the state I understand) to Redding for fuel. Then on its way to MDF.

Jake

12484. Elk Complex update

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-17 01:31:40 UTC
From: nitrobear@comcast.net
Topic: 12484 Message: 12484

Looks like the Elk complex is still growing up on the Klamath NF. Here is an update on the fires that comprise that complex.
These were all lightening caused I think.

--
Nitrobear

Incident: Elk Complex
Released: 2007-07-16 12:24:00 ET
Contact: Incident Information, Phyllis Swanson
Phone: (530) 493-1519
July 16, 2007
Protection of the town of Happy Camp is the number one priority. Dozer line and handlines are constructed on the west side of Happy Camp. A voluntary evacuation is taking place on the Elk Creek Road. On theTitus Fire, line construction efforts are occurring on the north and east flanks structure protection is being implemented. Outlying structures are being protected east of the Titus Fire.
The Siskiyou County Sheriff's Department Office of Emergency Services has taken steps to locate an evacuation center at Marble Mountain Ranch in the event a voluntary evacuation becomes necessary in the town of Happy Camp from Dolittle Road to Chambers Flat.
Individuals with special needs, such as bed ridden individuals, need to let the Sheriff's Office know so plans can be made.
Happy Camp District:
Little Grider Fire (approx. 636 acres): The fire continues to burn down hill towards Perkins Gulch.
Titus Fire (approx. 1408 acres): The fire burned over Titus Peak towards Elk Creek yesterday. There is a mandatory evacuation for campers and miners. Lines have been constructed around structures.
King Creek II Fire (approx. 1464 acres): The fire is burning north east to Coon Creek .
Elk Fire (approx. 930 acres): This fire continues to be monitored. This fire is in very steep inaccessible area.
Tom Martin Fire (approx. 40 acres): Tom Martin Fire (approx. 40 acres): Fire contained.
Clear Fire (approx. 10 acres): Tom Martin Fire (approx. 40 acres): Fire contained.
The remaining small fire will continue to be monitored, patrolled and staffed as resources allow.
Total Complex Acreage: 4725 acres
Total Complex Containment: 15% Expected Full Containment: 7/29/2007
Cost to Date: $2,300,000 Injuries to Date: 6
Structures Threatened: 506
Committed Resources: 1123 personnel
Additional fires on the Klamath National Forest:
Oak Knoll District:
China Fire (approx. 2000 acres)
Incident Management Team Southern California 1 (Walker) has Taken command of the incident.
Salmon District: zero fires

Scott River District:
Black Fire (approx. 15-20 acres)
Sky Fire (approx. 22 acres)
Goosenest District: zero
Cal Fire:
Secret Fire (approx.450 acres):
Shaft Fire (approx. 6 acres)
Additional Fire Information: http://www.inciweb.org/ (including other fires) or (530) 493-2243. Please go to the Klamath NF website for more information on restrictions and trail closures at www.fs.fed.us/r5/klamath/conditions/.

> Anyone have any info on the fire close to Chilcoot??

Heard that it was a UPRR train that had started the fires. One at UP Scotts, which would be railroad north of Reno Jct, and a second fire at UP Hawley, which would be at the town of Beckwourth, off of Hwy 70 about 4 - 5 miles east of Portola.

Haven't heard anything else, but do know that the train is on it's way down the FRC, so hopefully whatever trubs it was having has been fixed, and don't set the Canyon on fire...

Later,
Todd...

Have heard thru the grapevine that a UPRR train had started a couple of fires. One at UP Scotts and the other at UP Hawley. Hawley is located near the town of Beckwourth, just east of Portola. The siding at Scotts is just north of Hwy 70 as you crest Beckwourth Pass, north of Reno Jct. Been alot of recent lightening activity in this area. I see where the train is going to depart Portola and go down thru the FRC, so hopefully whatever trubs they were having has been fixed!

Anymore updates?

Thanks,

Todd...

12492. New NIFC channels

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-17 22:07:33 UTC
From: David Coursey
Topic: 12492 Message: 12492

So far this season, I have heard of three new frequencies being used at fires that don¹t appear on lists available to me.

166.3125 was used at the Antelope Complex in Plumas County. 166.3375 and 166.3625 were both used on the Angora fire. All are tactical channels and I believe aircraft used all of them. Some believe that individual forests have been assigned air tactical channels. I believe it is more likely that the size of the NIFC cache as been expanded to include these and other as yet undocumented (by us) frequencies.

73,

David, N5FDL

12493. Reno fire?

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-18 02:14:53 UTC
From: nitrobear@comcast.net
Topic: 12493 Message: 12493

Since it's pretty quiet on here, I'm wondering what is going on with the fire SW of Reno. I talked to an associate in Reno today who was driving south and all of a sudden he uttered something like Holey $#!t, there is another huge fire here that is up in the trees! I asked him what that meant and he told me it was in the timber and running, yeah, I coached him a bit but he said it looked pretty "bad". The fire started south of the developed area, SW of Reno yesterday. He said it was moving south towards Mt. Rose.
Is there anyone in Reno with an update? I can't find anything on the web that has any information.
Thanks!

Not hard to find info out...every Reno News Media site has tons of info...Plus a bunch of fire related websites with info...

Anyway, started yesterday...Hawken Incident...currently 2000 acres and about 10% contained.

Here is link to webcam of fire:

12496. RE: [NorCalFire] Reno fire?

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-18 04:09:58 UTC
From: Larish, Michael
Topic: 12493 Message: 12496

I'm up in Tahoe right now and spent the day in Reno/Sparks. The fire flared quite a bit this afternoon with strong winds. Further, around 1400 today, there were several major plumes of black smoke which usually indicates a structure, car or other man-made object burning. I don't know the official stance but I'd guess that they lost a few structures...

The fire is due west of Reno-proper in the foothills just south of I-80 as it leaves the valley.

Mike

You know, the last time they had a fire in that area, I came through shortly after....on 80, that is..and I could not believe that they'd been able to make access, much less a fireline of any kind!

That stuff is STEEP and what vegetation there is has got to be anchored in the merest smears of dirt between the boulders. Amazing how they can scratch a line where they need one, but boy I don't envy them one darn bit.

Admire, you betcha. Envy, no. ! I'm lazy! But very grateful that they are there. :)

The fire is called the Hawkin Fire. Started yesteday at 1430 hrs. Currently 1700 acres @ 5% contained. Transition to a Type I-IMT projected for 7/19/2007. Fire Behavior today was violent and erratic. Structure protection remains in place. Red Flag winds for the next two days are of primary concern. Lack of resources nationally is a major concern.

You can get current info from the Sierra Front Web site: http://www.sierrafront.net/news%20releases.htm

12499. Hawken fire update

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-20 01:30:15 UTC
From: nitrobear@comcast.net
Topic: 12499 Message: 12499

It's again pretty quiet so I'll post an update on the Hawken just west of Reno. This fire has received some national attention along with other lightening caused incidents in the west.
Resources are becoming pretty slim tonight. I saw something today about "international resources" being considered to supplement the troops.
Seems like most of the new starts were Nevada, Idaho, Montana and up that way. California must have escaped the lightening?
Here is the dope on the Hawken at 11:00 today...

Fire Name: Hawken
Updated:
By:
Position:07/19/07 @ 11:00 PDT
Franklin Pemberton
Sierra Front Information Officer
Type I Team has set up an information number--775-746-4668
Location:
Start Date:
Start Time:
Cause
Current Size:
Fuel Type:
Jurisdiction:
Assisting AgenciesWest Reno, Caughlin Ranch area
07/16/07
2:30 p.m.
Under investigation
2,459 acres Containment: 15% contained; full containment expected by 7/24
Grass, sagebrush, mountain mahogany & moving up into larger timber
Reno FPD, Sierra Fire Protection District & Humboldt-Toiyabe National Forest
BLM, NDF and all surrounding counties
Public Safety:There remains a reduced threat to some residences & commercial properties (the main fire front is west and well uphill of most threatened structures).

No evacuations or road closures are in place at this time.

The Humboldt-Toiyabe National Forest/Washoe County Department of Regional Parks and Open Space has closed the following trails in southwest Reno as a safety precaution:
-Hunter Creek
-Whites Creek
-Thomas Creek
-Jones Creek/Whites Creek Loop Trail from Galena Creek Regional Park
-Ophir Trail from Davis Creek Regional Park
Click here to download a 157 kb pdf map of the trail closures

The Mount Rose Wilderness is closed to all entry. Call 882-2766 for more information.

?I urge the cooperation of everyone in the Fire Area to help prevent additional fires from starting in the area, and to allow fire fighting efforts to focus on containment of the Hawken Fire,? Governor Jim Gibbons, July 17, 2007

Washoe County News Releases Related to the Fire:
1) Sheriff's Office Advises Remote Areas of Arrowcreek and Lone Tree to Prepare For Possible Evacuations/Open Public Call Center to Relieve Overloaded 9-1-1 Operators;
2) Citizens Asked to Limit Construction Activities That Could Start Wildland Fires

Other Threats:Mt. Rose Wilderness Area within the Humboldt-Toiyabe National Forest and open space lands within the viewshed of Reno.
Air Tankers 5Helicopters 10
Water Tenders 6Dozers 3
Hand Crews 22Engines 8
Command Staff 84# Personnel 574
Remarks:Channel 2 Live Webcam shot of Hawken Fire.

ICP is at McQueen High School. Mike Whalen's Type 2 Incident Management Team (IMT) is managing the incident - Robbie McAboy, Public Information Officer, (702) 622-5754. A Type I IMT (Martin) has been ordered and is projected to take over from Whalen's team on 7/19 at 0600.
Crews on the north and east flanks of the fire will work to improve fire line that is in place and patrol the fire area near structures. On the south and west flanks of the fire crews will continue to construct and improve hand line. Five helicopters have been assigned to the fire and will assist fire crews and initial attack of new fires when requested.

No injuries have been reported.

Cost to date: $1,245,000

The Fire Gods are drawing down the resources on the Zaca Fire in Santa Barbara County as well due to the national fire situation as other newer fires take greater precidence and priority.
It appears California is not the focus of concern right now from the perspective of NIFC.

This is the earliest we've been at National Preparedness Level 5 that I can remember but I'm probably forgetting that it happened this early or earlier in some year like 2002.
In any case we have no choice but to last but at what cost in lives, property, and the public treasury?
At least we have the Aussies, Kiwis, and Canucks on the way as well as our military.

Did you guys see the article on the tanker pilot who survived the crash of
his single-engine plane in NV yesterday? Pretty cool!

Gotta wonder though...if you're covered in aviation fuel and fire slurry,
what happens if someone strikes a spark?.....

PA

Following units responding to vegetation fire -- Jakes IC:

E 2761, 2762, 2762, 2789, ENF 65 & 33, 74, 28
Growlersberg 2 & 3
WT 83
T88 and 89 dispatched from Grass Valley

Helo 88B - 15 min ETA
BC 2712

Tac 9

Time out: 1452

I know there's more, but couldn't catch the units

E83 reports aprox 15 acres at 1459; taking IC until relieved

Sorry, I looked the location up after posting -- it was at Luneman and Jakes Eighty roads in the Lotus area in El Dorado County. Several miles south of the eastern fingers of Folsom Lake.

Resources were being canceled after 1-1/2 hours. I lost track after about 1600. Reception wasn't reliable on the online scanner.

The 2 firefighters lost this morning are Capt. Matt Burton and
Engineer Scott Desmond of the Contra Costa Fire District. Matt and
Scott had rescued 1 civilian and had re-entered the fire building to
attempt the rescue of 2 other trapped civilians when a
flashover/collapse occurred.
As a former Capt. at their Station (#70) in San Pablo (S.F. Bay Area)
I ask that everyone in the group extend their condolences to the
families, friends and fellow firefighters of the Contra Costa Fire
District.
Fraternally,
Russell S. Greenlaw
Capt. CCCFD (ret.)
Director, Peninsula Fire Dist.(Plumas County)

12515. CA-KNF-Elk Complex-Helicopter Crash

Yahoo group: norcalfire (2005 — 2016)
Date: 2007-07-23 22:16:20 UTC
From: spfdbc
Topic: 12515 Message: 12515

This information released by North Ops:

July 23, 2007 11:30 a.m.

At approximately 1015 a.m. on Monday, July 23, 2007, a type 2 helicopter was reported down on the Elk Fire burning within the Klamath National Forest. One fatality is confirmed and the pilot's name will be released pending family notification. The cause of the crash is under investigation and the National Transportation Safety Board has been notified. Fire crews and additional helicopter support are working to suppress a small ground fire associated with the crash.

Fires breaking out Kelly Ridge area - southeast of Oroville.
Wed 3:15pm

Circle IC is fire #1 - Circle Drive near Oro-Bangor, cross of Naranja Ave.

Fire #2 somewhere (possible La Mirada Drive)

Third fire is behind a mobile home park in Kelly Ridge somewhere.

151.400 BTU Local
154.415 Butte Support as Command

20 acres Rapid rate of Spread, 3 structures confirmed down. Air Attack
210 is sounding a little stressed. Not sure which fire is what via
phone report to me and the live scanner.

Jake

multiple structure threat, power lines down
Throwing tons of smoke, air tac says spotting to the east.

Venting propane tank, just to add some fun.

15:35
If someone can pick this up, I gotta split....
